

WCDMA UGxx AT Commands Manual

UMTS/HSPA Module Series

Rev. WCDMA_UGxx_AT_Commands_Manual_V1.6

Date: 2016-01-27

Our aim is to provide customers with timely and comprehensive service. For any assistance, please contact our company headquarters:

Quectel Wireless Solutions Co., Ltd.

Office 501, Building 13, No.99, Tianzhou Road, Shanghai, China, 200233

Tel: +86 21 5108 6236 Mail: <u>info@quectel.com</u>

Or our local office, for more information, please visit:

http://www.quectel.com/support/salesupport.aspx

For technical support, to report documentation errors, please visit:

http://www.quectel.com/support/techsupport.aspx

Or Email: Support@quectel.com

About the Document

History

Revision	Date	Author	Description
1.0	2014-08-28	Laguna XU/ Wythe WANG	Initial
1.1	2014-12-10	Roddick SUN/ Yolanda YAO/ Jessica GENG	 Added AT Commands: ATS4/ATS3/+GOI/+QRIR/+QCFG/+QCCID/ +QSIMSTAT/+QSIMDET/+CTZR/+CTZU/ +QLTS/+QECCNUM/+QSCLK/+CALM/+CRSL/ +QAUDLOOP/+QDAC/+QLTONE/+QLDTMF/ +QWDTMF Modified AT Commands: +VTS/+VTD/+CGDCONT/+CPBR Updated the description of URC
1.2	2015-03-01	Bonnie ZHAO/ Jesse ZHANG	 Changed the document name from "UG95" to "UGxx" Added AT Commands: +QCMGS/+QCMGR/+QCFG="nwscanmode"/ +QCFG="fota/cid"/+QCFG="ussd/textescape"/ +QCFG="sms/textescape"
1.3	2015-04-01	Jesse ZHANG	Updated applicable modules
1.4	2015-05-21	Jesse ZHANG	 Updated the description of +QSCLK Added <number> description in +CPBF and +CPBW</number> Added AT Commands: +QCFG="vbatt"/+QCFG="temp"/ +QCFG="remoteip"
1.5	2015-08-18	Roddick SUN/ Sophie ZHU/	1. Added AT Commands: +QGPCLASS/+QGDCNT/+QAUGDCNT/ +CIND/+QCFG="stateurc/enable"/+QMIC/ +QAUDMOD/+QAUDCFG/+QSIDET/ +QAUDGAIN/+QCLKOUT/+QPCMON/+QIIC

			2. Removed +CLVL/+CMUT from Table 7	
			Added AT Commands:	
			+QGAUTH/+QALARM/+QTEMP	
1.6	2016-01-27	Roddick SUN	2. Added the note for auto save commands	
			3. Modified the description of +QAUDCFG/	
			+QDAC/+QECCNUM/+QCFG

1 Introduction

1.1. Scope of the Document

This document presents the AT Commands Set for Quectel cellular engine UGxx.

1.2. AT Command Syntax

The "AT" or "at" prefix must be set at the beginning of each command line. To terminate a command line enter <CR>. Commands are usually followed by a response that includes "<CR><LF><response><CR><LF>". Throughout this document, only the responses are presented, "<CR><LF>" are omitted intentionally.

The AT Commands Set implemented by UGxx is a combination of 3GPP TS 27.007, 3GPP TS 27.005 and ITU-T recommendation V.25ter and the AT Commands developed by Quectel.

All these AT commands can be split into three categories syntactically: "basic", "S parameter", and "extended". They are listed as follows:

Basic syntax

These AT commands have the format of "AT
AT
<

S parameter syntax

These AT commands have the format of "ATS< n>=< m>", where "< n>" is the index of the **S** register to set, and "< m>" is the value to assign to it.

Extended syntax

These commands can be operated in several modes, as following table:

Table 1: Types of AT Commands and Responses

Test Command	AT+< <i>x</i> >=?	This command returns the list of parameters and value ranges set by the corresponding Write Command or internal processes.
Read Command	AT+< <i>x</i> >?	This command returns the currently set value of the parameter or parameters.
Write Command	AT+ <x>=<></x>	This command sets the user-definable parameter values.
Execution Command	AT+ <x></x>	This command reads non-variable parameters affected by internal processes in the UE.

1.3. Supported Character Sets

The AT command interface defaults to the **GSM** character set and supports the following character sets:

- GSM
- UCS2
- IRA
- HEX

The character set can be configured and interrogated by AT+CSCS command (3GPP TS 27.007). The character set is defined in 3GPP TS 27.005. The character set affects transmission and reception of SMS and SMS Cell Broadcast Messages, the entry and display of phone book entries text field.

1.4. AT Command Interface

The AT command interface includes three USB ports (USB MODEM port, USB AT port1 and USB AT port2) and one main UART port.

UART Port Feature:

The baud rates of 0, 300, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400, 460800, 921600, 3000000, and 6000000 are supported at present. The default baud rate of main UART port is 0, which means the main UART port would be working on auto baud rate by default.

The main UART port supports hardware flow control lines RTS and CTS. But it is off by default. AT command AT+IFC=2.2 is used to enable hardware flow control.

1.5. Unsolicited Result Code

As an Unsolicited Result Code and a report message, URC is not issued as part of the response related to an executed AT command. URC is issued by the module without being requested by the TE and it is issued automatically when a certain event occurs. Typical events leading to URCs are incoming calls ("RING"), received short messages etc. The AT command AT+QCFG="urc/port" could list all available port(s) and current port. This command also can disable URC indication of a specified port.

1.6. Turn off Procedure

It is recommended to execute AT+QPOWD command to turn off the module, as it is the safest and best way. This procedure is realized by letting the module log off from the network and allowing the software to enter into a secure and safe data state before disconnecting the power supply.

After sending AT+QPOWD, do not enter any other AT commands. The module outputs message "POWERED DOWN" and sets the STATE pin as low to enter into the shutdown state. In order to avoid data loss, it is suggested to wait for 1s to switch off the VBAT after the STATE pin is set as low and the URC "POWERED DOWN" is outputted. If "POWERED DOWN" has not been received after 65s, you should force to switch off the VBAT.

2 General Commands

2.1. ATI Display Product Identification Information

The ATI command delivers a product information text.

ATI Display Product Identification Information		
Execution Command	Response	
ATI	TA issues product information text.	
	Quectel	
	UGxx	
	Revision: <revision></revision>	
	ОК	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<revision> Revision of software release

Example

ATI

Quectel UGxx

Revision: UGxxENAR01A01E1G

OK

2.2. AT+GMI Request Manufacturer Identification

AT+GMI returns a manufacturer identification text. Command is identical with AT+CGMI.

AT+GMI Request Manufacturer Identification			
Test Command	Response		
AT+GMI=?	ОК		
Execution Command	Response		
AT+GMI	TA reports one or more lines of information text which permit		
	the user to identify the manufacturer.		
	Quectel		
	ОК		
Reference			
V.25ter			

2.3. AT+GMM Request TA Model Identification

AT+GMM returns a product model identification text. Command is identical with AT+CGMM.

AT+GMM Request TA Model Identification		
Test Command	Response	
AT+GMM=?	OK	
Execution Command	Response	
AT+GMM	TA returns a product model identification text.	
	UGxx	
	OK	
Reference		
V.25ter		

2.4. AT+GMR Request TA Revision Identification of Software Release

AT+GMR delivers a product firmware version identification. Command is identical with AT+CGMR.

AT+GMR Request TA Revision Identification of Software Release	
Test Command	Response
AT+GMR=?	OK

Execution Command AT+GMR	Response TA reports one or more lines of information text which permit the user to identify the revision of software release. <revision> OK</revision>
Reference	
V.25ter	

e

2.5. AT+GOI Request Global Object Identification

AT+GOI Request Global Object Identification		
Test Command	Response	
AT+GOI=?	ОК	
Execution Command	Response	
AT+GOI	TA reports one or more lines of information text which permit the user to identify the device, based on the ISO system for registering unique object identifiers. <object id=""> OK</object>	
Reference		
V.25ter		

Parameter

<Object Id> Identifier of device type

Example

AT+GOI

UGxx

OK

2.6. AT+CGMI Request Manufacturer Identification

AT+CGMI returns a manufacturer identification text.

AT+CGMI Request Manufacturer Identification	
Test Command	Response
AT+CGMI=?	ОК
Execution Command	Response
AT+CGMI	TA returns manufacturer identification text.
	Quectel
	ОК
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

2.7. AT+CGMM Request Model Identification

AT+CGMM returns a product model identification text.

AT+CGMM Request Model Iden	tification
Test Command	Response
AT+CGMM=?	OK
Execution Command	Response
AT+CGMM	TA returns product model identification text.
	UGxx
	ОК
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

2.8. AT+CGMR Request TA Revision Identification of Software Release

AT+CGMR delivers a product firmware version identification.

AT+CGMR Request TA Revision Identification of Software Release	
Test Command	Response
AT+CGMR=?	OK
Execution Command	Response
AT+CGMR	TA returns identification text of product software version.
	<revision></revision>
	OK
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

Parameter

<revision></revision>	Identification text of product software version	

2.9. AT+GSN Request International Mobile Equipment Identity (IMEI)

AT+GSN returns the International Mobile Equipment Identity (IMEI). Command is identical with AT+CGSN.

AT+GSN Request International Mobile Equipment Identity (IMEI)	
Test Command	Response
AT+GSN=?	OK
Execution Command	Response
AT+GSN	TA reports the IMEI (International Mobile Equipment Identity)
	number in information text which permit the user to identify
	the individual ME device.
	<imei></imei>
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

<IMEI> IMEI of the telephone

NOTE

The serial number (IMEI) varies with the individual ME device.

2.10. AT+CGSN Request Product Serial Number Identification

AT+CGSN returns International Mobile Equipment Identity (IMEI). Command is identical with AT+GSN.

AT+CGSN Request Product Serial Number Identification	
Test Command AT+CGSN=?	Response OK
Execution Command AT+CGSN	Response <imei></imei>
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

2.11. AT&F Set all Current Parameters to Manufacturer Defaults

AT&F resets AT command settings to their factory default values. However, the command does not change the current baud rate of UART.

AT&F Set all Current Parameters to Manufacturer Defaults		
Execution Command	Response	
AT&F[<value>]</value>	TA sets all current parameters to the manufacturer defined profile. See Table 7: Factory Default Settings Restorable with AT&F. OK	
Maximum Response Time	300ms	

Reference V.25ter		
Parameter		
<value></value>	<u>0</u>	Set all TA parameters to manufacturer defaults

2.12. AT&V Display Current Configuration

AT&V displays three profiles of several AT command parameters, including the single-letter AT command parameters which are not readable otherwise.

AT&V Display Current Configuration		
Execution Command AT&V	Response TA returns the current parameter setting. See Table 2: AT&V Response. OK	
Maximum Response Time	300ms	
Reference V.25ter		

Table 2: AT&V Response

AT&V	
&C: 1	
&D: 1	
&F: 0	
&W: 0	
E: 1	
Q: 0	
V: 1	
X: 4	

Z: 0	
S0: 0	
S5: 8	
S6: 2	
S7: 0	
S8: 2	
S10: 15	
ок	

2.13. AT&W Store Current Parameters to User Defined Profile

AT&W stores the current AT command settings to a user defined profile in non-volatile memory.

AT&W Store Current Parameters to User Defined Profile		
Execution Command AT&W[<n>]</n>	Response TA stores the current parameter settings in the user defined profile. See Table 8: AT Command Settings Storable with AT&W. OK	
Maximum Response Time	300ms	
Reference V.25ter		

Parameter

|--|

2.14. ATZ Set all Current Parameters to User Defined Profile

ATZ restores the current AT command settings to the user defined profile in non-volatile memory, if one was stored with AT&W before. Any additional AT command on the same command line may be ignored.

ATZ does not change the current baud rate of UART.

ATZ Set all Current Parameters to User Defined Profile		
Execution Command ATZ[<value>]</value>	Response TA sets all current parameters to the user defined profile. See Table 9: AT Command Settings Storable with ATZ. OK	
Maximum Response Time	300ms	
Reference V.25ter		

Parameter

<value></value>	<u>0</u>	Reset to profile number 0	
		•	

2.15. ATQ Set Result Code Presentation Mode

ATQ controls whether the result code is transmitted to the CE. Other information text transmitted as response is not affected.

ATQ Set Result Code Presentation Mode		
Execution Command	Response	
ATQ <n></n>	This parameter setting determines whether or not the TA	
	transmits any result code to the TE. Information text	
	transmitted in response is not affected by this setting.	
	If <n>=</n> 0:	
	ОК	
	If <n>=1:</n>	
	(none)	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<n></n>	<u>0</u>	TA transmits result code
	1	Result codes are suppressed and not transmitted

2.16. ATV TA Response Format

This command determines the contents of header and trailer transmitted with AT command result codes and information responses.

The result codes, their numeric equivalents and brief descriptions are listed in the following table.

ATV TA Response Format	
Execution Command ATV <value></value>	Response This parameter setting determines the contents of the header and trailer transmitted with result codes and information responses. When <value>=0 0 When <value>=1 OK</value></value>
Maximum Response Time	300ms
Reference V.25ter	

Parameter

<value></value>	0	Information response: <text><cr><lf></lf></cr></text>
		Short result code format: <numeric code=""><cr></cr></numeric>
	<u>1</u>	Information response: <cr><lf><text><cr><lf></lf></cr></text></lf></cr>
		Long result code format: <cr><lf><verbose code=""><cr><lf></lf></cr></verbose></lf></cr>

Example

ATV1 OK AT+CSQ +CSQ: 30,0	//Set <value>=1</value>
OK ATV0 0 AT+CSQ	//When <value></value> =1 result code is OK //Set <value></value> =0
+CSQ: 30,0	//When <value></value> =0 result code is 0

Table 3: ATV0&ATV1 Result Codes Numeric Equivalents and Brief Description

ATV1	ATV0	Description
OK	0	Acknowledges execution of a command
CONNECT	1	A connection has been established; the DCE is moving from command state to online data state
RING	2	The DCE has detected an incoming call signal from network
NO CARRIER	3	The connection has been terminated or the attempt to establish a connection failed
ERROR	4	Command not recognized, command line maximum length exceeded, parameter value invalid, or other problem with processing the command line
NO DIALTONE	6	No dial tone detected
BUSY	7	Engaged (busy) signal detected
NO ANSWER	8	"@" (Wait for Quiet Answer) dial modifier was used, but remote ringing followed by five seconds of silence was not detected before expiration of the connection timer (S7)

2.17. ATE Set Command Echo Mode

ATE controls whether the module echoes characters received from TE during AT command state.

ATE Set Command Echo Mode	
Execution Command ATE <value></value>	Response This setting determines whether or not the TA echoes characters received from TE during command state. OK
Maximum Response Time Reference V.25ter	300ms

Parameter

<value></value>	0	Echo mode off
	<u>1</u>	Echo mode on

2.18. A/ Repeat Previous Command Line

A/ repeats previous AT command line, and "/" acts as the line terminating character.

A/ Repeat Previous Command Line	
Execution Command	Response
A/	Repeat Previous Command
Reference	
V.25ter	

Example

ATI

Quectel

UGxx

Revision: UGxxENAR01A01E1G

OK

A/

//Repeat previous command

Quectel UGxx

Revision: UGxxENAR01A01E1G

OK

2.19. ATS3 Set Command Line Termination Character

ATS3 determines the character recognized by the module to terminate an incoming command line. It is also generated for result codes and information text, along with character value set via ATS4.

ATS3 Set Command Line Termination Character		
Read Command	Response	
ATS3?	<n></n>	
	OK	
Write Command	Response	
ATS3= <n></n>	This parameter setting determines the character recognized	
	by TA to terminate an incoming command line. The TA also	
	returns this character in output.	
	ОК	

Maximum Response Time	300ms
Reference	
V.25ter	

<n></n>	0- <u>13</u> -127	Command line termination character (Default 13= <cr>)</cr>

2.20. ATS4 Set Response Formatting Character

ATS4 determines the character generated by the module for result code and information text, along with the command line termination character set via ATS3.

ATS4 Set Response Formatting Character		
Read Command	Response	
ATS4?	<n></n>	
	OK	
Write Command	Response	
ATS4= <n></n>	This parameter setting determines the character generated by the TA for result code and information text. OK	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<n> 0-10-127 Response formatting character (Default 10=<lf>)</lf></n>

2.21. ATS5 Set Command Line Editing Character

ATS5 determines the character value used by the module to delete the immediately preceding character from the AT command line (i.e. equates to backspace key).

ATS5 Set Command Line Editing Character		
Read Command	Response	
ATS5?	<n></n>	
	ок	
Write Command	Response	
ATS5= <n></n>	This parameter setting determines the character recognized	
	by TA as a request to delete the immediately preceding	
	character from the command line.	
	OK	
Maximum Response Time	300ms	
Reference		
V.25ter		

<n></n>	0- <u>8</u> -127	Response editing character (Default 008= <backspace>)</backspace>
---------	------------------	---

2.22. ATX Set CONNECT Result Code Format and Monitor Call Progress

ATX determines whether or not the module transmits particular result codes to the TE. It also controls whether or not the module verifies the presence of a dial tone when it begins dialing, and whether or not engaged tone (busy signal) detection is enabled.

ATX Set CONNECT Result Code Format and Monitor Call Progress		
Execution Command	Response	
ATX <value></value>	This parameter setting determines whether or not the TA detected the presence of dial tone and busy signal and whether or not TA transmits particular result codes. OK	
Maximum Response Time	300ms	
Reference V.25ter		

<value></value>	0	CONNECT result code only returned, dial tone and busy detection are both disabled
	1	CONNECT <text> result code only returned, dial tone and busy detection are both disabled</text>
	2	CONNECT <text> result code returned, dial tone detection is enabled, busy detection is</text>
	_	disabled
	3	CONNECT <text> result code returned, dial tone detection is disabled, busy detection</text>
		is enabled
	<u>4</u>	CONNECT <text> result code returned, dial tone and busy detection are both enabled</text>

2.23. AT+CFUN Set Phone Functionality

AT+CFUN controls the functionality level. It can also be used to reset the UE.

AT+CFUN Set Phone Functionality		
Test Command	Response	
AT+CFUN=?	+CFUN: (list of supported <fun></fun> s),(list of supported <rst></rst> s)	
	OK	
Read Command	Response	
AT+CFUN?	+CFUN: <fun></fun>	
	ОК	
Write Command	Response	
AT+CFUN= <fun>[,<rst>]</rst></fun>	ок	
	If error is related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	15s, determined by network.	
Reference		
3GPP TS 27.007		

Parameter

<fun></fun>	0	Minimum functionality
	<u>1</u>	Full functionality (Default)
	4	Disable phone both transmit and receive RF circuits
<rst></rst>	<u>0</u>	Do not reset the ME before setting it to <fun> power level</fun>
		This is default when <rst> is not given</rst>

1 Reset the ME. The device is fully functional after the reset.

Example

AT+CFUN=0 //Switch phone to minimum functionality

OK

AT+COPS?

+COPS: 0 //No operator is registered

OK

AT+CPIN?

+CME ERROR: 10 //SIM is not inserted

AT+CFUN=1 //Switch phone to full functionality

OK

+QUSIM: 0

+CPIN: SIM PIN AT+CPIN=1234

OK

+CPIN: READY

+QIND: SMS DONE

+QIND: PB DONE

AT+CPIN?

+CPIN: READY

OK

AT+COPS?

+COPS: 0,0,"CHN-UNICOM",2 //Operator is registered

OK

2.24. AT+CMEE Error Message Format

AT+CMEE controls the format of error result codes: "ERROR", error numbers or verbose messages as "+CME ERROR: <err>" and "+CMS ERROR: <err>".

AT+CMEE Error Message Format		
Test Command	Response	
AT+CMEE=?	+CMEE: (list of supported <n>s)</n>	
	ок	
Read Command	Response	
AT+CMEE?	+CMEE: <n></n>	
	ок	
Write Command	Response	
AT+CMEE= <n></n>	TA disables or enables the use of result code +CME ERROR :	
	<pre><err> as an indication of an error related to the functionality of</err></pre>	
	the ME.	
	OK	
Maximum Response Time	300ms	
Reference		
3GPP TS 27.007		

<n></n>	0	Disable result code
	<u>1</u>	Enable result code and use numeric values
	2	Enable result code and use verbose values

Example

AT+CMEE=0 //Disable result code

OK

AT+CPIN=1234

ERROR //Only "ERROR" will be displayed

AT+CMEE=1 //Enable error result code with numeric values

OK

AT+CPIN=1234 +CME ERROR: 10

AT+CMEE=2 //Enable error result code with verbose (string) values

OK

AT+CPIN=1234

+CME ERROR: SIM not inserted

2.25. AT+CSCS Select TE Character Set

AT+CSCS write command informs the module which character set is used by the TE. It enables the UE to convert character strings correctly between TE and UE character sets.

AT+CSCS Select TE Character Set		
Test Command	Response	
AT+CSCS=?	+CSCS: (list of supported <chset>s)</chset>	
	ок	
Read Command	Response	
AT+CSCS?	+CSCS: <chset></chset>	
	OK	
Write Command	Response	
AT+CSCS= <chset></chset>	Set character set <chset></chset> which is used by the TE. The TA	
	can then convert character strings correctly between the TE	
	and ME character sets.	
	ок	
Maximum Response Time	300ms	
Reference		
3GPP TS 27.007		

Parameter

"LICS2"	UCS2 alphabet
	International reference alphabet
IINA	international reference alphabet
"HEX"	UCS2 alphabet
" <u>GSM</u> "	GSM default alphabet

Example

AT+CSCS?	//Query the current character set
+CSCS: "GSM"	
ок	

3 Serial Interface Control Commands

3.1. AT&C Set DCD Function Mode

AT&C controls the behavior of the UE's DCD line.

Response This parameter determines how the state of circuit 109 (DCD) relates to the detection of received line signal from the distant end. OK
300ms

Parameter

<value></value>	0	DCD line is always ON
	<u>1</u>	DCD line is ON only in the presence of data carrier

3.2. AT&D Set DTR Function Mode

AT&D determines how the UE responds if DTR line is changed from the ON to the OFF condition during online data mode.

AT&D Set DTR Function Mode			
Execution Command	Response		
AT&D[<value>]</value>	This parameter determines how the TA responds when circuit		
	108/2 (DTR) is changed from the ON to the OFF condition		
	during data mode.		
	ОК		

Maximum Response Time	300ms
Reference	
V.25ter	

<value></value>	0	TA ignores status on DTR
	<u>1</u>	ON->OFF on DTR: Change to command mode with remaining the connected call
	2	ON->OFF on DTR: Disconnect data call, change to command mode. During
		state DTR=OFF, auto-answer function is disabled

3.3. AT+IFC Set TE-TA Local Data Flow Control

AT+IFC determines the flow control behavior of the serial port.

AT+IFC Set TE-TA Local Data Flow Control		
Test Command	Response	
AT+IFC=?	+IFC: (list of supported <dce_by_dte>s),(list of supported</dce_by_dte>	
	<dte_by_dce>s)</dte_by_dce>	
	ок	
Read Command	Response	
AT+IFC?	+IFC: <dce_by_dte>,<dte_by_dce></dte_by_dce></dce_by_dte>	
	OK	
Write Command	Response	
AT+IFC= <dce_by_dte>,<dte_by_dce></dte_by_dce></dce_by_dte>	This parameter setting determines the data flow control on	
	the serial interface for data mode.	
	OK	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<dce_by_dte></dce_by_dte>	Specifies the method will be used by TE when receiving data from TA		
	<u>0</u>	None	
	2	RTS flow control	
<dte_by_dce></dte_by_dce>	Specifies the method will be used by TA when receiving data from TE		

0	1	Vο	no
U	- 1	VU	ПE

2 CTS flow control

NOTE

This flow control is applied for data mode.

Example

AT+IFC=2,2	//Open the hardware flow control
OK	
AT+IFC?	
+IFC: 2,2	
OK	

3.4. AT+IPR Set TE-TA Fixed Local Rate

AT+IPR is used to query and set the baud rate of the UART. The default baud rate value (**<rate>**) is 0bps. **<rate>** setting will not be restored with AT&F.

AT+IPR Set TE-TA Fixed Local Rate		
Test Command AT+IPR=?	Response +IPR: (list of supported auto detectable <rate>s),(list of supported fixed-only<rate>s) OK</rate></rate>	
Read Command AT+IPR?	Response +IPR: <rate> OK</rate>	
Write Command AT+IPR= <rate></rate>	Response This parameter setting determines the data rate of the TA on the serial interface. After the delivery of any result code associated with the current command line, the rate of command takes effect. OK	
Maximum Response Time Reference V.25ter	300ms	

<rate></rate>	Baud rate of per second	
	0	
	300	
	1200	
	2400	
	4800	
	9600	
	19200	
	38400	
	57600	
	115200	
	230400	
	460800	
	921600	
	3000000	
	6000000	

NOTES

- 1. If a fixed baud rate is set, make sure that both TE (DTE, usually external processor) and TA (DCE, Quectel module) are configured to the same rate.
- 2. If **IPR** is set to 0, it will change module to auto baudrate.
- 3. The value of AT+IPR cannot be restored with AT&F and ATZ.
- A selected baud rate takes effect after the write commands are executed and acknowledged by "OK".

Example

AT+IPR=115200	//Set fixed baud rate to 115200
ок	
AT+IPR?	
+IPR: 115200	
OK	

3.5. AT+QRIR Restore Ring Line to Inactive

If the behavior of ring line is "always", you should restore ring line to inactive by AT+QRIR. The behavior of ring line is controlled by AT+QCFG. Please refer to AT+QCFG="urc/ri/ring", AT+QCFG="urc/ri/other" and AT+QCFG="urc/ri/smsincoming".

AT+QRIR Restore Ring Line to Inactive		
Test Command	Response	
AT+QRIR=?	ОК	
Execution Command	Response	
AT+QRIR	ОК	
	ERROR	
Maximum Response Time	300ms	

4 Status Control Commands

4.1. AT+CPAS Mobile Equipment Activity Status

AT+CPAS execute command queries the module's activity status.

AT+CPAS Mobile Equipment Activity Status	
Test Command AT+CPAS=?	Response +CPAS: (list of supported <pas>s)</pas>
AITOI AO-:	OK
Execution Command	Response
AT+CPAS	TA returns the activity status of ME.
	+CPAS: <pas></pas>
	ОК
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

Parameter

<pas></pas>	<u>0</u>	Ready
	2	Unknown
	3	Ringing
	4	Call in progress or call hold

Example

AT+CPAS	
+CPAS: 0	//Module is idle

OK

ATD10086;

OK

AT+CLCC

+CLCC: 1,0,3,0,0,"10086",129

OK

AT+CPAS

+CPAS: 3 //Module is ringing

OK

AT+CLCC

+CLCC: 1,0,0,0,0,"10086",129

OK

AT+CPAS

+CPAS: 4 //Call in progress

OK

4.2. AT+CEER Extended Error Report

AT+CEER provides an extended report of 1 line about categorized error causes, such as:

- +CEER: "No report available"
- +CEER: "CC setup error",1,"Unassigned (unallocated) number"
- +CEER: "SM detach",0,"No cause information available"

AT+CEER Extended Error Report	
Test command	Response
AT+CEER=?	OK
Execution command	Response
AT+CEER	In case of CC and SM categories:
	+CEER: <category>[,<cause>,<descriptions>]</descriptions></cause></category>
	In case of SS category network error cause:
	+CEER: <category>,<cause>[,<tag>]</tag></cause></category>
	ОК
	ERROR

	If error is related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms

<category></category>	"No report available"
	"CC setup error"
	"CC modification error"
	"CC release"
	"SM attach error"
	"SM detach"
	"SM activation error"
	"SM deactivation"
	"SS network error cause"
	"SS network reject cause"
	"SS network GSM cause"
<cause></cause>	Contains a digit representing the error cause sent by network or internally. Refer
	to Table 13: Cause and Description List of AT+CEER.
<descriptions></descriptions>	A verbose string containing the textual representation. Refer to Table 13: Cause
	and Description List of AT+CEER.
<tag></tag>	SS error tag in 3GPP TS 24.008

4.3. AT+QCFG Extended Configuration Settings

AT+QCFG is used to query and configure various settings of module.

AT+QCFG Extended Configuration Settings		
Test Command	Response	
AT+QCFG=?	+QCFG: "urc/port",	
	(list of supported <enable></enable> s),	
	(list of supported <port_name></port_name> s)	
	+QCFG: "uart/power",	
	(list of supported <uart></uart> s),	
	(list of supported <mode>s)</mode>	
	+QCFG: "urc/ri/ring",	
	(list of supported <typeri>s),</typeri>	
	(list of supported <pulse_duration>s),</pulse_duration>	
	(list of supported <active_duration>s),</active_duration>	
	(list of supported <inactive_duration>s),</inactive_duration>	
	(list of supported <ring_no_disturbing>s),</ring_no_disturbing>	

Maximum Response Time Reference	300ms
Maximum Response Time	(list of supported <pulse_duration>s), (list of supported <pulse_count>s) +QCFG: "urc/ri/other", (list of supported <typeri>s), (list of supported <pulse_duration>s), (list of supported <pulse_count>s) +QCFG: "urc/delay", (list of supported <enable>s) +QCFG: "tone/incoming", (list of supported <value>s) +QCFG: "vbatt", ((list of supported <vbatt_type>s), (list of supported <vbatt_value>s), (list of supported <vbatt_on_off>s)) +QCFG: "nwscanmode", (list of supported <scan_mode>s), (list of supported <effect>s) +QCFG: "fota/cid", (list of supported <contextid>s) +QCFG: "ussd/textescape", (list of supported <enable>s) +QCFG: "sms/textescape", (list of supported <enable>s) +QCFG: "remoteip", (list of supported <enable>s) +QCFG: "remoteip", (list of supported <remotelpsel> s) OK 300ms</remotelpsel></enable></enable></enable></contextid></effect></scan_mode></vbatt_on_off></vbatt_value></vbatt_type></value></enable></pulse_count></pulse_duration></typeri></pulse_count></pulse_duration>
	+QCFG: "urc/ri/smsincoming", (list of supported <typeri>s),</typeri>

4.3.1. AT+QCFG="urc/port" List All Port (s) or Disable URC of Specified Port

AT+QCFG="urc/port" lists all available port (s) and current port. It can also disable URC indication of a specified port.

AT+QCFG="urc/port" Display All Port (s) and Disable URC of Specified Port	
Write Command	Response
AT+QCFG="urc/port"[, <enable>[,<por< th=""><th>If configuration parameters are omitted:</th></por<></enable>	If configuration parameters are omitted:
t_name>]]	+QCFG: "urc/port", <enable>,<port_name><port_type></port_type></port_name></enable>

	+QCFG: "urc/port", <enable>,<port_name><port_type> []</port_type></port_name></enable>
	ок
	If configuration parameters are entered: OK ERROR
	If error is related to ME functionality: +CME ERROR: <err></err>
Reference	

<enable></enable>	0	Disable URC indication of the port	
	<u>1</u>	Enable URC indication of the port	
<port_name></port_name>	A string to describe port name		
<port_type></port_type>	0	Current port	
	1	Available port	

NOTE

The configuration will be saved to NV automatically.

4.3.2. AT+QCFG="uart/power" Turn on/off the UART Port

AT+QCFG="uart/power" Turn on/off the UART Port		
Write Command	Response	
AT+QCFG="uart/power"[, <mode>]</mode>	If <mode> is omitted:</mode>	
	+QCFG: "uart/power", <uart>,<mode></mode></uart>	
	OK	
	If <mode> is not omitted:</mode>	
	ок	
	ERROR	
	If error is related to ME functionality:	

	+CME ERROR: <err></err>
Reference	

<uart></uart>	0	UART 1
	1	UART 3
<mode> 0 Auto turn on/off the UA</mode>		Auto turn on/off the UART port
	1	Turn on the UART port
	2	Turn off the UART port

4.3.3. AT+QCFG="urc/ri/ring" Ring Line Behavior of RING

AT+QCFG="urc/ri/ring", AT+QCFG="urc/ri/smsincoming" and AT+QCFG="urc/ri/other" control the behavior of ring line when URC is reported. These configurations will be stored into NV automatically. The ring line is active low. AT+QCFG="urc/ri/ring" specifies the behavior of ring line when RING is presented to indicate an incoming call.

The sum of parameter **<active_duration>** and **<inactive_duration>** determines the interval time of "RING" indications when a call is coming.

AT+QCFG="urc/ri/ring" Ring Line	Behavior of RING
Write Command AT+QCFG="urc/ri/ring"[, <typeri>[,<pu< td=""><td>Response If configuration parameters are omitted (+QCFG="urc/ri/ring"), return current configuration: +QCFG: "urc/ri/ring",<typeri>,<pulse_duration>,<active_duration>,<inactive_duration>,<ring_no_disturbing>,<pulse_count> OK If configuration parameters are entered: OK ERROR If error is related to ME functionality: +CME ERROR: <err></err></pulse_count></ring_no_disturbing></inactive_duration></active_duration></pulse_duration></typeri></td></pu<></typeri>	Response If configuration parameters are omitted (+QCFG="urc/ri/ring"), return current configuration: +QCFG: "urc/ri/ring", <typeri>,<pulse_duration>,<active_duration>,<inactive_duration>,<ring_no_disturbing>,<pulse_count> OK If configuration parameters are entered: OK ERROR If error is related to ME functionality: +CME ERROR: <err></err></pulse_count></ring_no_disturbing></inactive_duration></active_duration></pulse_duration></typeri>
Maximum Response Time	300ms

<typeri></typeri>	The behavio	r of the ring line when URCs are presented
	"off"	No change. Ring line keeps inactive
	"pulse"	Pulse. Pulse width determined by <pulse_duration></pulse_duration>
	"always"	Change to active. You may restore to inactive by +QRIR
	<u>"auto"</u>	When "RING" is presented to indicate an incoming call, ring line changes to and keeps active. When ring of the incoming call ends, either answering or hanging up the incoming call, ring line will change to inactive.
	"wave"	When "RING" is presented to indicate an incoming call. The ring line outputs a square wave. Both <active_duration></active_duration> and <inactive_duration></inactive_duration> are used to set parameters of the square wave. When the ring of incoming call ends, either answering or hanging up the incoming call, ring line will change to inactive.
<pulse_duration></pulse_duration>	Set the width of pulse. Value ranges from 1 to 2000ms and default is 120ms This parameter is only meaningful when <typeri></typeri> is "pulse". If this parameter is not needed, you can set it as null.	
<active_duration></active_duration>	Set the active duration of the square wave, value ranges from 1 to 10000ms, and the default is 1000ms. This parameter is only meaningful when <typeri></typeri> is "wave".	
<inactive_duration></inactive_duration>	Set the inactive duration of the square wave, value ranges from 1 to 10000ms, and the default is 3000ms. This parameter is only meaningful when typeri is "wave".	
<ring_no_disturbing></ring_no_disturbing>	meaningful when <typer <ring_no_di<="" by="" disturbed="" th=""><th>the ring line behavior could be disturbed. This parameter is only when <typeri></typeri> is configured to "auto" or "wave". For example, is configured to "wave", if you need the square wave not to be other URCs (including SMS related URCs), you should set sturbing> to "on". It can be disturbed by other URCs which the behavior of ring line is caused by an incoming call ringing. It cannot be disturbed by other URCs which the behavior of ring line is caused by an incoming call ringing.</th></typer>	the ring line behavior could be disturbed. This parameter is only when <typeri></typeri> is configured to "auto" or "wave". For example, is configured to "wave", if you need the square wave not to be other URCs (including SMS related URCs), you should set sturbing> to "on". It can be disturbed by other URCs which the behavior of ring line is caused by an incoming call ringing. It cannot be disturbed by other URCs which the behavior of ring line is caused by an incoming call ringing.
<pul><pulse_count></pulse_count></pul>	The count o	f pulse. This parameter is only meaningful when <typeri></typeri> is
-l- 2100_0031105	"pulse".	
	_	s from 1 to 5 and default is 1. The interval time between two ual to <pulse_duration>.</pulse_duration>

NOTE

The configuration will be saved to NV automatically.

4.3.4. AT+QCFG="urc/ri/smsincoming" Ring Line Behavior of Incoming SMS

AT+QCFG="urc/ri/smsincoming" specifies the behavior of ring line when related incoming message URCs are presented. Related incoming message URCs list: **+CMTI,+CMT,+CDS,+CBM**.

AT+QCFG="urc/ri/smsincoming"	Ring Line Behavior of Incoming SMS
Write Command	Response
AT+QCFG="urc/ri/smsincoming"[, <typ< td=""><td>If configuration parameters are omitted</td></typ<>	If configuration parameters are omitted
eri>[, <pulse_duration>[,<pulse_count< td=""><td>(+QCFG="urc/ri/smsincoming"), return current</td></pulse_count<></pulse_duration>	(+QCFG="urc/ri/smsincoming"), return current

	"urc/ri/other", <typeri>,<pulse_duration>,<pulse_count></pulse_count></pulse_duration></typeri>
	ок
	If configuration parameters are entered:
	ОК
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms

Parameter

<typeri></typeri>	The behavior of the ring line when URCs are presented	
	"off" No change. Ring line keeps inactive	
	"pulse" Pulse. Pulse width determined by <pulse_duration></pulse_duration>	
<pul><pulse_duration></pulse_duration></pul>	Set the width of pulse. Value ranges from 1 to 2000ms and the default is	
	120ms. This parameter is effect only when <typeri> is "pulse".</typeri>	
<pul><pre><pulse_count></pulse_count></pre></pul>	The count of pulse. This parameter is only meaningful when <typeri> is</typeri>	
	"pulse". Value ranges from 1 to 5 and default is 1. The interval time between	
	two pulses is equal to <pulse_duration>.</pulse_duration>	

NOTE

The configuration will be saved to NV automatically.

4.3.6. AT+QCFG="urc/delay" Delay URC Indication

AT+QCFG="urc/delay" can delay the output of URC indication until ring line pulse ends.

Indication
Response
If configuration parameter is omitted:
+QCFG: "urc/delay", <enable></enable>
ок
If configuration parameter is entered:
OK SPROB
ERROR
If error is related to ME functionality:
+CME ERROR: <err></err>

<enable></enable>	<u>0</u>	URC indication will be output when ring line pulse starts
	1	URC indication will be output when ring line pulse ends (only the type of ring
		line is "pulse", refer to AT+QCFG="urc/ri/ring",
		AT+QCFG="urc/ri/smsincoming" and AT+QCFG="urc/ri/other")

NOTE

The configuration will be saved to NV automatically.

4.3.7. AT+QCFG="tone/incoming" Enable/Disable Ring Tone

AT+QCFG="tone/incoming" is used to enable or disable ring tone.

AT+QCFG="tone/incoming" Enal	ble/Disable Ring Tone
Write Command	Response
AT+QCFG="tone/incoming"[, <value>]</value>	If configuration parameters are omitted:
	+QCFG: "tone/incoming", <value></value>
	ОК
	If configuration parameters are entered:
	OK
	ERROR

	If error is related to ME functionality: +CME ERROR: <err></err>
Reference	

<value> A numeric parameter which indicates ring tone is open or not. The default value is 1.

- 0 Disable ring tone
- 1 Enable ring tone

NOTE

The configuration will be saved to NV automatically.

4.3.8. AT+QCFG="nwscanmode" Network Search Mode Configuration

AT+QCFG="nwscanmode" specifies the mode of searching network. If <effect> is omitted, the configuration will take effect immediately.

AT+QCFG="nwscanmode" Netw	ork Search Mode Configuration
Write Command AT+QCFG="nwscanmode"[, <scan_m ode="">[,<effect>]]</effect></scan_m>	Response If configuration parameters are omitted (+QCFG="nwscanmode"), return current configuration: +QCFG: "nwscanmode", <scan_mode> OK If configuration parameters are entered:</scan_mode>
	OK ERROR If error is related to ME functionality: +CME ERROR: <err></err>
Reference	

<scan_mode></scan_mode>	Number format, network search mode		
	<u>0</u> AUTO		
	1 GSM Only		

2 UMTS Only

Number format, when to take effect

- 0 Take effect after UE reboots
- 1 Take effect immediately

NOTE

<effect>

The configuration will be saved to NV automatically.

4.3.9. AT+QCFG="vbatt" Voltage Detection

AT+QCFG="vbatt" can enable voltage detection and set corresponding parameters.

About Voltage Detection:

When the voltage is lower than the lowest voltage limit, the module will output:

+QIND: "vbatt",-2

If it does not come back to a degree greater than the lowest voltage limit within 2 seconds, the module will be turned off automatically.

When the voltage is greater than the lowest voltage limit, but lower than low voltage warning limit, the module will output:

+QIND: "vbatt",-1

When the voltage is greater than the highest voltage limit, the module will output:

+QIND: "vbatt",2

If it does not come back to a degree lower than highest voltage limit within 2 seconds, the module will be turned off automatically.

When the voltage is lower than the highest voltage limit, but greater than high voltage warning limit, the module will output:

+QIND: "vbatt",1

When the voltage comes back to normal voltage range, the module will output:

+QIND: "vbatt",0

Voltage detection is disabled by default. It is suggested to enable voltage detection in order to avoid module breakdown due to excessively high or low voltage.

The configuration will be stored to NV automatically.

AT+QCFG="vbatt" Voltage Detection	tion
Write Command	Response
AT+QCFG="vbatt"[, <vbatttype>[,<vba< td=""><td>If configuration parameters are omitted</td></vba<></vbatttype>	If configuration parameters are omitted
ttvalue>, <vbattonoff>]]</vbattonoff>	(+QCFG="vbatt"), return current configuration:
	+QCFG: "vbatt",
	(<vbatttype>,<vbattvalue>,<vbattonoff>),</vbattonoff></vbattvalue></vbatttype>
	(<vbatttype>,<vbattvalue>,<vbattonoff>),</vbattonoff></vbattvalue></vbatttype>
	ок
	If configuration parameters are entered:
	+QCFG: "vbatt",
	(<vbatttype>,<vbattvalue>,<vbattonoff>)</vbattonoff></vbattvalue></vbatttype>
	OK
	Else, response:
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms

<vbatttype></vbatttype>	Voltage type		
	-2 Indicate the lowest voltage		
	-1 Indicate the low voltage warning		
	1 Indicate the high voltage warning		
	2 Indicate the highest voltage		
<vbattvalue></vbattvalue>	Voltage threshold value (mv)		
	(3250~3290~3420) The lowest voltage limit(If below this limit, module will shut down) (3480~3500~3520) Low voltage warning limit		
	(4190~4210~4230) High voltage warning limit		
	(4280~4310~4400) The highest voltage limit (If above this limit, module will shut down)		
<vbattonoff></vbattonoff>	Enable/disable voltage detection function		
	<u>0</u> Disable		
	1 Enable		

Example

NOTE

The configuration will be saved to NV automatically.

4.3.10. AT+QCFG="temp" Temperature Detection

AT+QCFG="temp" can enable temperature detection and set corresponding parameters.

About Temperature Detection:

When the temperature is lower than the lowest temperature limit, the module will output:

```
+QIND: "temp",-2
```

If the temperature did not rise to a degree greater than the lowest temperature within 5 seconds, the module will be turned off automatically. When the temperature is greater than the lowest temperature limit, but lower than the low temperature warning limit, the module will output:

```
+QIND: "temp",-1
```

When temperature is greater than the highest temperature limit, the module will output:

```
+QIND: "temp",2
```

If the temperature did not drop to a degree lower than the highest temperature limit within 5 seconds, the module will be turned off automatically.

When the temperature is lower than the highest temperature limit, but greater than the high temperature warning limit, the module will output:

+QIND: "temp",1

When the temperature comes back from the low temperature warning limit or the high temperature warning limit to normal temperature range, the module will output:

+QIND: "temp",0

The configuration will be stored to NV automatically.

AT+QCFG="temp" Temperature D	etection
Write Command AT+QCFG="temp"[, <temptype>[,<temptype>[,<temptype>]]</temptype></temptype></temptype>	Response If configuration parameters are omitted (+QCFG="temp"), return current configuration: +QCFG: "temp", (<temptype>,<tempvalue>,<temponoff>), (<temptype>,<tempvalue>,<temponoff>), OK If configuration parameters are entered: OK ERROR If error is related to ME functionality: +CME ERROR: <err></err></temponoff></tempvalue></temptype></temponoff></tempvalue></temptype>
Maximum Response Time	300ms

<temptype></temptype>	Temperature type		
	-2	Indicate the lowest temperature	
	-1	Indicate low temperature warning	
	1	Indicate high temperature warning	
	2	Indicate the highest temperature	
<tempvalue></tempvalue>	Temperature threshold value (degrees Celsius)		
	(-40~-35)	The lowest temperature limit (If below this limit, the module will be shut	

		down). Default value is -38
	(-35~-30)	Low temperature warning limit. Default value is -32
	(70~80)	High temperature warning limit. Default value is 75
	(80~90)	The highest temperature limit (If above this limit, the module will be shut
		down). Default value is 85
<temponoff></temponoff>	Enable/disable temperature detection function	
	<u>0</u>	Disable
	1	Enable

Example

AT+QCFG="temp",-1 +QCFG: "temp",(-1,-35,0)	//Query the low temperature warning limit and setting	
OK AT+QCFG="temp",-1,-35,1 OK	//Set the low temperature warning limit	
<enable detection,="" greater="" limit="" limit,="" low="" lower="" lowest="" temperature="" than="" the="" warning="" when=""></enable>		
+QIND: "temp",-1	//Report result when temperature is lower than warning temperature	
<enable back="" detection,="" is="" normal="" range="" temperature="" to="" when=""></enable>		
+QIND: "temp",0	//Report result when temperature is back to normal temperature	

4.3.11. AT+QCFG="fota/cid" DFOTA Context ID Configuration

When you upgrade firmware by DFOTA on a FTP server or HTTP server, you need to activate a PDP context ID for FTP connection or HTTP connection. The default PDP context ID is 1, and it can be configured by AT+QCFG="fota/cid",<contextid>.

AT+QCFG="fota/cid"	DFOTA Cor	ntext ID Configuration
Write Command		Response
AT+QCFG="fota/cid"[, <co< td=""><td>ontextID>]</td><td>If configuration parameters are omitted</td></co<>	ontextID>]	If configuration parameters are omitted
		(AT+QCFG="fota/cid"), return current configuration:
		+QCFG: "fota/cid", <contextid></contextid>
		ок
		If configuration parameters are entered:
		ок
		ERROR

	If error is related to ME functionality: +CME ERROR: <err></err>
Reference	
Parameter	
<contextid></contextid>	Integer type, context ID, range is 1-20, the default value is 1.

4.3.12. AT+QCFG="ussd/textescape" Character Escape of USSD Text

When AT+CSCS="GSM" or AT+CSCS="IRA", and USSD outputting text contains character <CR>, <LF>, quotation mark or others, user may make a parse error with USSD URC. AT+QCFG="ussd/textescape" can enable character escape function of USSD text to avoid this error. The configuration is saved into NV automatically.

AT+QCFG="ussd/textescape" Character Escape of USSD Text		
Write Command	Response	
AT+QCFG="ussd/textescape"[, <enabl< td=""><td>If configuration parameters are omitted</td></enabl<>	If configuration parameters are omitted	
e>]	(+QCFG="ussd/textescape"), return current configuration:	
	+QCFG: "ussd/textescape", <enable></enable>	
	ок	
	If configuration parameters are entered:	
	ок	
	ERROR	
	If error is related to ME functionality:	
	+CME ERROR: <err></err>	
Reference		

<enable></enable>	<u>0</u>	Character escape function of USSD text is disabled
	1	Character escape function of USSD text is enabled
		When AT+CSCS="GSM" or AT+CSCS="IRA", in USSD text outputting:
		0x5C (show in hex, character Ö in GSM, character \ in ASCII) will be
		escaped into 0x5C3543 ("\5C").
		0x0D (show in hex, character <cr> in GSM and IRA) will be escaped into</cr>
		0x5C3044 ("\0D").

0x0A (show in hex, character <LF> in GSM and IRA) will be escaped into 0x5C3041 ("\0A").

0x22 (show in hex, character " in GSM and IRA) will be escaped into 0x5C3232 ("\22").

0x00 (show in hex, character @ in GSM) will be escaped into 0x5C3030 ("\00").

NOTE

UG95 module does not support this function.

4.3.13. AT+QCFG="sms/textescape" Character Escape of SMS Text

This command is similar to AT+QCFG="ussd/textescape". The only difference is this command affects SMS text.

AT+QCFG="sms/textescape" Character Escape of SMS Text		
Write Command	Response	
AT+QCFG="sms/textescape"[, <enabl< td=""><td>If configuration parameters are omitted</td></enabl<>	If configuration parameters are omitted	
e>]	(+QCFG="sms/textescape"), return current configuration:	
	+QCFG: "sms/textescape", <enable></enable>	
	OK	
	If configuration parameters are entered:	
	OK	
	ERROR	
	ERROR	
	If error is related to ME functionality:	
	+CME ERROR: <err></err>	
Reference		

<enable></enable>	<u>0</u>	Character escape function of SMS text is disabled
	1	Character escape function of SMS text is enabled
		When AT+CSCS="GSM" or AT+CSCS="IRA", in SMS text outputting:
		0x5C (show in hex, character Ö in GSM, character \ in ASCII) will be
		escaped into 0x5C3543 ("\5C").
		0x0D (show in hex, character <cr> in GSM and IRA) will be escaped into</cr>
		0x5C3044 ("\0D").

0x0A (show in hex, character <LF> in GSM and IRA) will be escaped into 0x5C3041 ("0A").

0x22 (show in hex, character " in GSM and IRA) will be escaped into 0x5C3232 ("\22").

0x00 (show in hex, character @ in GSM) will be escaped into 0x5C3030 ("\00").

NOTE

UG95 module does not support this function.

4.3.14. AT+QCFG="remoteip" Enable/Disable Remote IP Function

AT+QCFG="remoteip" is used to set the function whether or not "remoteip" negotiation will be injected during the PPP dialing period. This parameter will not be saved and it will be effective immediately after setting.

AT+QCFG="remoteip" Enable/Disable Remote IP Function		
Write Command AT+QCFG="remoteip"[, <remotelp"]< th=""><th>Response If <remoteipsel> is absence which means read. +QCFG: "remoteip",<remotelpsel> OK</remotelpsel></remoteipsel></th></remotelp"]<>	Response If <remoteipsel> is absence which means read. +QCFG: "remoteip",<remotelpsel> OK</remotelpsel></remoteipsel>	
	If none is absence which means setting parameters. OK ERROR If error is related to ME functionality: +CME ERROR: <err></err>	
Maximum Response Time	300ms	

<remotelpsel></remotelpsel>	Disable/enable the function of "remoteip" negotiation	
	<u>0</u> Def	ault value, no "remoteip" negotiation
	1 Act	ive "remoteip" negotiation

NOTE

This default value is "0" for no "remoteip" negotiation function. New settings are saved in NV. This function becomes effective immediately.

Example

AT+QCFG="remoteip" +QCFG: "remoteip",0	//Check current status
ОК	
AT+QCFG="remoteip",1	//Setting the "remoteip" negotiation active
ОК	
AT+QCFG="remoteip"	//Check current status
+QCFG: "remoteip",1	
OK	
AT+QCFG="remoteip",0	//Setting the "remoteip" negotiation inactive
OK	//octaing the Terrioterp Regoliation indutive
AT+QCFG="remoteip"	//Check current status
+QCFG: "remoteip",0	
OK	

4.3.15. AT+QCFG="stateurc/enable" Enable/Disable State URC Indication

AT+QCFG="urc/port" can configure whether to allow reporting stateurc, this configuration will be saved in the NV. It is still valid after restarting the module. The State URC refers to those who contain the keyword "+CPIN:", "+CFUN:", "+QUSIM:" or " QIND:".

AT+QCFG="stateurc/enable"	Enable/Disable State URC Indication
Read Command AT+QCFG="stateurc/enable"	Response +QCFG: "stateurc/enable", <enable_val> OK</enable_val>
Write Command AT+QCFG="stateurc/enable", <e nable_val=""></e>	Response OK ERROR

<enable_val></enable_val>	Integer type, enable/disable State URC indication	
	<u>0</u>	Disable
	1	Enable

Example

AT+QCFG="stateurc/enable",1

OK

AT+QCFG="stateurc/enable" +QCFG: "stateurc/enable",1

OK

AT+QCFG="stateurc/enable",0

OK

AT+QCFG="stateurc/enable" +QCFG: "stateurc/enable",0

OK

NOTE

UG95 module does not support this function.

4.4. AT+QINISTAT Query Initialization State

AT+QINISTAT Query Initialization State		
Test Command	Response	
AT+QINISTAT=?	OK	
Execution Command	Response	
AT+QINISTAT	+QINISTAT: <state></state>	
	OK	
Reference		

<state></state>	0	No initialization
	1	Ready to execute AT command

- 2 SMS has finished initialization
- 3 Phonebook has finished initialization

NOTE

When <state> is 3, it also means initialization of SIM card related functions has been finished.

4.5. AT+CIND Command of Control Instructions

AT+CIND Command of Control Instruction	ons
Test Command AT+CIND=?	Response +CIND: (<descr>,(list of supported <ind>s))[,(<descr>,(list of supported <ind>s))[,]] OK</ind></descr></ind></descr>
Read Command AT+CIND?	Response +CIND: <ind>[,<ind>[,]] OK If error is related to ME functionality: +CME ERROR: <err></err></ind></ind>

Parameter

<descr></descr>	String type, instructions state, values refer to the following notes
<ind></ind>	Integer types, instructs event, related to the value of the <descr></descr>

NOTES

- 1. UG95 module does not support this function.
- 2. The value of **<descry>** and **<ind>**:

<descr></descr>	<ind></ind>	
"call": call status indication	0: no call	
	1: call	
"roam": roaming indicator	0: Registered with the ownership or unregistered network	
	1: Registered to the roaming network	
"signal": signal strength indication	0-5: According to the from weak to strong, divided into five levels	

"service": network service status

indicator

0: Not registered on the network 1: Registered to the known network

"GPRS coverage": PS domain

registration instructions

0: Unregistered on PS domain

1: Registered on PS domain

Example

AT+CIND=?

+CIND: ("call",(0,1)),("roam",(0,1)),("signal",(0-5)),("service",(0,1)),("GPRS coverage",(0,1))

OK

AT+CIND?

+CIND: 0,0,4,1,1

OK

Temperature Detection 4.6. AT+QTEMP

AT+QTEMP Temperature Detection	on
Write Command AT+QTEMP	Response +QTEMP: <tempvalue></tempvalue>
	ок
Maximum Response Time	300ms

Parameter

<tempvalue> Integer type. Temperature value (degrees Celsius)

Example

AT+QTEMP

+QTEMP: 27

OK

5 SIM Related Commands

5.1. AT+CIMI Request International Mobile Subscriber Identity (IMSI)

AT+CIMI requests the International Mobile Subscriber Identity (IMSI) which is intended to permit the TE to identify the individual SIM card or active application in the UICC (GSM or USIM) which is attached to MT.

AT+CIMI Request International Mobile Subscriber Identity (IMSI)		
Test Command	Response	
AT+CIMI=?	ок	
Execution Command	Response	
AT+CIMI	TA returns <imsi> for identifying the individual SIM which is</imsi>	
	attached to ME.	
	<imsi></imsi>	
	ок	
	If error is related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		
3GPP TS 27.007		

Parameter

<imsi></imsi>	International Mobile Subscriber Identity (string without double quotes)	

Example

AT+CIMI 460023210226023	//Query IMSI number of SIM which is attached to ME
ок	

5.2. AT+CLCK Facility Lock

AT+CLCK is used to lock, unlock or interrogate a MT or a network facility **<fac>**. The command can be aborted when network facilities are set or interrogated.

AT+CLCK Facility Lock	
Test Command	Response
AT+CLCK=?	+CLCK: (list of supported <fac>s)</fac>
	ок
Write Command	Response
AT+CLCK= <fac>,<mode>[,<passwd>[,,<class>]]</class></passwd></mode></fac>	This command is used to lock, unlock or interrogate a ME or a network facility <fac></fac> . Password is normally needed to do such actions. When querying the status of a network service (<mode></mode> =2) the response line for 'not active' case (<status></status> =0) should be returned only if service is not active for any <class></class> .
	If <mode> is not equal 2 and command is successful: OK</mode>
	If <mode>=2 and command is successful:</mode>
	+CLCK: <status>[,<class>]</class></status>
	[+CLCK: <status>[,<class>]]</class></status>
	[]
	ок
Maximum Response Time	5s
Reference 3GPP TS 27.007

	1	Lock	
	2	Query status	
<passwd></passwd>	Passw	sword	
<class></class>	1	Voice	
	2	Data	
	4	FAX	
	7	All telephony except SMS (Default)	
	8	Short message service	
	16	Data circuit sync	
	32	Data circuit async	
	64	Dedicated packet access	
	128	Dedicated PAD access	
<status></status>	0	Off	
	1	On	

Example

AT+CLCK="SC", 2 +CLCK: 0	//Query the status of SIM card lock, 0-unlock
OK AT+CLCK="SC",1,"1234" OK	//Lock SIM card, the password is 1234
AT+CLCK="SC",2 +CLCK: 1	//Query the status of SIM card lock, 1-lock

OK	
AT+CLCK="SC",0,"1234"	//Unlock SIM card
ОК	

5.3. AT+CPIN Enter PIN

AT+CPIN is used to enter a password or query whether or not module requires a password which is necessary before it can be operated (SIM PIN, SIM PUK, PH-SIM PIN, etc.).

AT+CPIN Enter PIN	
Test Command	Response
AT+CPIN=?	ОК
Read Command	Response
AT+CPIN?	TA returns an alphanumeric string indicating whether or not some password is required.
	+CPIN: <code></code>
	ок
Write Command	Response
AT+CPIN= <pin>[,<new pin="">]</new></pin>	TA stores a password which is necessary before it can be operated (SIM PIN, SIM PUK, etc.). If the PIN is to be entered twice, the TA shall automatically repeat the PIN. If no PIN request is pending, no action is taken and an error message, +CME ERROR, is returned to TE. If the PIN required is SIM PUK or SIM PUK2, the second pin is required. This second pin, <new pin="">, is used to replace the old pin in the SIM.</new>
	ОК
Maximum Response Time	5s
Reference 3GPP TS 27.007	

<code></code>	READY	MT is not pending for any password
	SIM PIN	MT is waiting for SIM PIN to be given
	SIM PUK	MT is waiting for SIM PUK to be given
	SIM PIN2	MT is waiting for SIM PIN2 to be given
	SIM PUK2	MT is waiting for SIM PUK2 to be given

	PH-NET PIN	MT is waiting for network personalization password to be given
	PH-NET PUK	MT is waiting for network personalization unblocking password
		to be given
	PH-NETSUB PIN	MT is waiting for network subset personalization password to be
		given
	PH-NETSUB PUK	MT is waiting for network subset personalization unblocking
		password to be given
	PH-SP PIN	MT is waiting for service provider personalization password to
		be given
	PH-SP PUK	MT is waiting for service provider personalization unblocking
		password to be given
	PH-CORP PIN	MT is waiting for corporate personalization password to be
		given
	PH-CORP PUK	MT is waiting for corporate personalization unblocking
		password to be given
<pin></pin>	Password (string type). If the requested password was a PUK, such as SIM PUK1 or
	PH-FSIM PUK or anot	her password, then <pin> must be followed by <new pin=""></new></pin>
<new pin=""></new>	New password (string	type) if the requested code was a PUK.

Example

//Enter	PI	Ν
---------	----	---

AT+CPIN?

+CPIN: SIM PIN //Query PIN code is locked

OK

AT+CPIN=1234 //Enter PIN

OK

+CPIN: READY

AT+CPIN? //PIN has already been entered

+CPIN: READY

OK

//Enter PUK and PIN

AT+CPIN?

+CPIN: SIM PUK //Query PUK code is locked

OK

AT+CPIN="26601934","1234" //Enter PUK and new PIN password

OK

+CPIN: READY	
AT+CPIN? +CPIN: READY	//PUK has already been entered
OK	

5.4. AT+CPWD Change Password

AT+CPWD sets a new password for the facility lock function defined by command Facility Lock +CLCK.

AT+CPWD Change Password	
Test Command	Response
AT+CPWD=?	TA returns a list of pairs which present the available facilities
	and the maximum length of their password.
	+CPWD: (list of supported <fac>s),(<pwdlength>s)</pwdlength></fac>
	OK
Write Command	Response
AT+CPWD= <fac>,<oldpwd>,<newpwd< td=""><td>TA sets a new password for the facility lock function.</td></newpwd<></oldpwd></fac>	TA sets a new password for the facility lock function.
>	
	OK
Maximum Response Time	5s
Reference	
3GPP TS 27.007	

<fac></fac>	"SC"	SIM (lock SIM/UICC card) (SIM/UICC asks password in MT power-up and when this lock command is issued)
	"AO"	BAOC (Barr All Outgoing Calls, refer to 3GPP TS 22.088 clause 1)
	"OI"	BOIC (Barr Outgoing International Calls, refer to 3GPP TS 22.088 clause 1)
	"OX"	BOIC-exHC (Barr Outgoing International Calls except to Home Country, refer to
		3GPP TS 22.088 clause 1)
	"AI"	BAIC (Barr All Incoming Calls, refer to 3GPP TS 22.088 clause 2)
	"IR"	BIC-Roam (Barr Incoming Calls when Roaming outside the home country, refer
		to 3GPP TS 22.088 clause 2)
	"AB"	All barring services (refer to 3GPP TS 22.030, applicable only for <mode>=0)</mode>
	"AG"	All outgoing barring services (refer to 3GPPTS 22.030, applicable only for
		<mode>=0)</mode>

	"AC	All incoming barring services (refer to 3GPPTS 22.030, applicable only for <mode>=0)</mode>
	"PS"	PH SIM (lock Phone to SIM/UICC card)(MT asks password when other current SIM/UICC card inserted;
		MT may remember certain amount of previously used cards thus not requiring
		password when they are inserted)
	"P2"	SIM PIN2
	"PN"	Network Personalization (refer to 3GPP TS 22.022)

	"PP"	Service Provider Personalization (refer to 3GPP TS 22.022)
	"PC"	Corporate Personalization (refer to 3GPP TS 22.022)
<pwdlength></pwdlength>	Integer type, max length of password	
<oldpwd></oldpwd>	Password specified for the facility from the user interface or with command	
<newpwd></newpwd>	New password	

Example

AT+CPIN? +CPIN: READY		
OK AT+CPWD="SC","1234","4321" OK	//Change SIM card password to "4321"	
//Restart module or re-activate the SIM card		
AT+CPIN +CPIN: SIM PIN	//Query PIN code is locked	
OK AT+CPIN=4321 OK	//PIN must be entered to define a new password "4321"	
+CPIN: READY		

5.5. AT+CSIM Generic SIM Access

AT+CSIM allows a direct control of the SIM that is installed in the currently selected card slot by a distant application on the TE. The TE shall then keep the processing of SIM information within the frame specified by GSM/UMTS.

AT+CSIM Generic SIM Access	
Test Command	Response
AT+CSIM=?	OK
Write Command	Response
AT+CSIM= <length>,<command/></length>	+CSIM: <length>,<response></response></length>
	OK
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<length></length>	Integer type. Length of <command/> or <response></response> string		
<command/>	Command transferred by the MT to the SIM in the format as described in		
	3GPP TS 51.011		
<response></response>	Response to the command transferred by the SIM to the MT in the format as		
	described in 3GPP TS 51.011		

5.6. AT+CRSM Restricted SIM Access

AT+CRSM offers easy and limited access to the SIM database. It transmits the SIM **<command>** and required parameters to the MT.

AT+CRSM Restricted SIM Acces	s
Test Command	Response
AT+CRSM=?	OK
Write Command	Response
AT+CRSM= <command/> [, <fileid>[,<p1< th=""><th>+CRSM: <sw1>,<sw2>[,<response>]</response></sw2></sw1></th></p1<></fileid>	+CRSM: <sw1>,<sw2>[,<response>]</response></sw2></sw1>
>, <p2>,<p3>[,<data>][,<pathid>]]]</pathid></data></p3></p2>	
	OK
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>

Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<command/>	USIM command number
	176 READ BINARY
	178 READ RECORD
	192 GET RESPONSE
	214 UPDATE BINARY
	220 UPDATE RECORD
	242 STATUS
<fileid></fileid>	Integer type; identifier for an elementary data file on USIM, if used by
	<command/>
<p1>, <p2>, <p3></p3></p2></p1>	Integer type; parameters transferred by the MT to the SIM. These parameters are mandatory for every command, except GET RESPONSE and STATUS. The values are described in 3GPP TS 51.011
<data></data>	Information which shall be written to the SIM (hexadecimal character format; refer to +CSCS)
<pathld></pathld>	Contains the directory path of an elementary file on a UICC in hexadecimal format
<sw1>, <sw2></sw2></sw1>	Integer type; information from the SIM about the execution of the actual command. These parameters are delivered to the TE in both cases, on successful or failed execution of the command
<response></response>	Response of a successful completion of the command previously issued (hexadecimal character format; refer to +CSCS). STATUS and GET RESPONSE return data, which gives information about the current elementary data field. This information includes the type of file and its size (refer to 3GPPTS 51.011). After READ BINARY, READ RECORD or RETRIEVE DATA command the requested data will be returned. <response> is not returned after a successful UPDATE BINARY, UPDATE RECORD or SET DATA command</response>

5.7. AT+QCCID Show ICCID

AT+QCCID returns the ICCID (Integrated Circuit Card Identifier) number of the SIM card.

AT+QCCID Show ICCID	
Test Command	Response

AT+QCCID=?	ОК
Execution Command AT+QCCID	Response +QCCID: <iccid></iccid>
	OK ERROR
Maximum Response Time	300ms

Example

AT+QCCID	//Query ICCID of the SIM card
+QCCID: 898600220909A0206023	
OK	

5.8. AT+QSIMDET SIM Card Detection

AT+QSIMDET enables SIM/USIM card hotswap function. SIM/USIM card is detected by GPIO interrupt. You should also set the level of SIM/USIM detecting pin when the SIM card is inserted. This command can be saved by AT&W.

AT+QSIMDET SIM Card Detection	
Test Command	Response
AT+QSIMDET=?	+QSIMDET: (0,1),(0,1)
	OK
Read Command	Response
AT+QSIMDET?	+QSIMDET: <enable>,<insert_level></insert_level></enable>
Maile Occasional	OK
Write Command	Response
AT+QSIMDET= <enable>,<insert_level< td=""><td>OK</td></insert_level<></enable>	OK
>	ERROR
Maximum Response Time	300ms

<enable></enable>	Switch on or off detecting SIM/USIM card	
	<u>0</u> Off	

	1 On	
<insert_level></insert_level>	The level of SIM detection pin when a SIM card is inserted	
	<u>0</u> Low level	
	1 High level	

NOTE

- 1. Hotswap function is invalid if the configured value of **<insert_level>** is inconsistent with hardware design.
- 2. The configuration will be saved to NV automatically.

Example

AT+QSIMDET=1,0 OK	//If SIM/USIM detection pin level is low when SIM/USIM card inserted
<remove card="" sim="" usim=""></remove>	
+CPIN: NOT READY	
<insert card="" sim="" usim=""></insert>	
+CPIN: READY	//If PIN1 of the SIM/USIM card is unlocked

5.9. AT+QSIMSTAT SIM Inserted Status Report

AT+QSIMSTAT can query SIM/USIM inserted status or enable SIM/USIM inserted status report. The configuration of this command can be saved by AT&W.

AT+QSIMSTAT SIM Inserted Status Report	
Test Command	Response
AT+QSIMSTAT=?	+QSIMSTAT: (0,1)
	OK
Read Command	Response
AT+QSIMSTAT?	+QSIMSTAT: <enable>,<inserted_status></inserted_status></enable>
	ОК
Write Command	Response
AT+QSIMSTAT= <enable></enable>	OK
	ERROR
Maximum Response Time	300ms

<enable> Enable or disable SIM/USIM inserted status report. If it is enabled, when SIM/USIM

card removes or inserts, the URC: +QSIMSTAT: <enable>,<inserted_status> will

be reported.

0 Disable

1 Enable

<inserted_status> SIM/USIM is inserted or removed. This argument is not allowed to be set.

0 Removed

1 Inserted

2 Unknown, before SIM initialization

NOTE

The configuration will be saved to NV automatically.

Example

AT+QSIMSTAT? //Query SIM/USIM inserted status

+QSIMSTAT: 0,1

OK

AT+QSIMDET=1,0

OK

AT+QSIMSTAT=1 //Enable SIM/USIM inserted status report

OK

AT+QSIMSTAT? +QSIMSTAT: 1,1

OK

<Remove SIM/USIM card>

+QSIMSTAT : 1,0 //Report of SIM/USIM inserted status, removed

+CPIN: NOT READY AT+QSIMSTAT? +QSIMSTAT: 1,0

OK

<Insert SIM/USIM card>

+QSIMSTAT : 1,1 //Report of SIM/USIM inserted status, inserted

+CPIN: READY

6 Network Service Commands

6.1. AT+COPS Operator Selection

AT+COPS returns the current operators and their status and allows to set automatic or manual network selection.

AT+COPS Operator Selection	
Test Command AT+COPS=?	Response TA returns a set of five parameters, each representing an operator present in the network. Any of the formats may be unavailable and should then be an empty field. The list of operators shall be in order: home network, networks referenced in SIM and other networks. +COPS: (list of supported <stat>, long alphanumeric <oper>, short alphanumeric <oper>, numeric <oper>s)[,< Act>])s][,< Plmn_flag>])s] [,,(list of supported <mode>s),(list of supported <format>s)] OK</format></mode></oper></oper></oper></stat>
	If error is related to ME functionality: +CME ERROR: <err></err>
Read Command AT+COPS?	Response TA returns the current mode and the currently selected operator. If no operator is selected, <format>, <oper> and <act> are omitted. +COPS: <mode>[,<format>[,<oper>][,<act>]]</act></oper></format></mode></act></oper></format>
	OK If error is related to ME functionality: +CME ERROR: <err></err>
Write Command	Response
AT+COPS= <mode></mode>	TA forces an attempt to select and register the GSM/UMTS

[, <format>[,<oper>]]</oper></format>	network operator. If the selected operator is not available, no other operator shall be selected (except <mode>=4). The format of selected operator name shall apply to further read commands (+COPS?). OK If error is related to ME functionality: +CME ERROR: <err></err></mode>
Maximum Response Time	180s, determined by network.
Reference 3GPP TS 27.007	

<stat></stat>	0	Unknown
	1	Operator available
	2	Operator current
	3	Operator forbidden
<oper></oper>	Opera	tor in format as per <mode></mode>
<mode></mode>	<u>0</u>	Automatic mode; <oper> field is ignored</oper>
	1	Manual operator selection; <oper> field shall be present and <act> optionally</act></oper>
	2	Manual deregister from network
	3	Set only <format> (for read command +COPS?), do not attempt</format>
		registration/deregistration (<oper> and <act> fields are ignored); this value is not</act></oper>
		applicable in read command response
	4	Manual/automatic selected, <oper> field shall be presented; if manual selection</oper>
		fails, automatic mode (<mode>=0) is entered</mode>
<format></format>	0	Long format alphanumeric <oper>; can be up to 16 characters long</oper>
	1	Short format alphanumeric <oper></oper>
	2	Numeric <oper>; GSM location area identification number</oper>
<act></act>	Access	s technology selected
	0	GSM
	2	UTRAN
	3	GSM W/EGPRS
	4	UTRAN W/HSDPA
	5	UTRAN W/HSUPA
	6	UTRAN W/HSDPA and HSUPA
<plmn_flag< th=""><th>g> 0</th><th>Available PLMN is present on EHPLMN List</th></plmn_flag<>	g> 0	Available PLMN is present on EHPLMN List
	1	Available PLMN is present on User controlled List
	2	Available PLMN is present on Operator controlled List

Example

AT+COPS=?

//List all current network operators

+COPS:

(2,"CHN-UNICOM","UNICOM","46001",2),(1,"CHN-UNICOM","UNICOM","46001",0,0),(3,"CHINA MOBILE","CMCC","46000",0),,(0-4),(0-2)

OK

AT+COPS?

//Query the currently selected network operator

+COPS: 0,0,"CHN-UNICOM",2

OK

6.2. AT+CREG Network Registration

AT+CREG returns the network registration status. The write command sets whether or not to present URC.

AT+CREG Network Registration	
Test Command	Response
AT+CREG=?	+CREG: (list of supported <n>s)</n>
	OK
Read Command	Response
AT+CREG?	TA returns the status of result code presentation and an integer <stat> which shows whether the network has currently indicated the registration of the ME. Location information elements <lac> and <ci> are returned only when <n>=2 and ME is registered in the network. +CREG: <n>,<stat>[,<lac>,<ci>[,<act>]] OK</act></ci></lac></stat></n></n></ci></lac></stat>
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Write Command	Response
AT+CREG= <n></n>	TA controls the presentation of an unsolicited result code
	+CREG: <stat> when <n>=1 and there is a change in the ME</n></stat>
	network registration status.
	ОК
Maximum Response Time	300ms

Reference	
3GPP TS 27.007	

<n></n>	<u>0</u>	Disable network registration unsolicited result code
	1	Enable network registration unsolicited result code +CREG: <stat></stat>
	2	Enable network registration unsolicited result code with location information
		+CREG: <stat>[,<lac>,<ci>[,<act>]]</act></ci></lac></stat>
<stat></stat>	0	Not registered, ME is not currently searching a new operator to register to
	1	Registered, home network
	2	Not registered, but ME is currently searching a new operator to register to
	3	Registration denied
	4	Unknown
	5	Registered, roaming
<lac></lac>	String type, two bytes location area code in hexadecimal format	
<ci></ci>	String type, 16 bit (GSM) or 28 bit (UMTS) cell ID in hexadecimal format	
<act></act>	Acces	ss technology selected
	0	GSM
	2	UTRAN

Example

AT+CREG=1 OK	RAC!
+CREG: 1 AT+CREG=2 OK	//URC reports that ME has registered //Activates extended URC mode
+CREG: 1,"D504","08043799",2	//URC reports that operator has found location area code and cell ID

6.3. AT+CSQ Signal Quality Report

AT+CSQ indicates the received signal strength <rssi> and the channel bit error rate <ber>.

AT+CSQ Signal Quality Report	
Test Command	Response
AT+CSQ=?	+CSQ: (list of supported <rssi>s),(list of supported <ber>s)</ber></rssi>

	ОК
Execution Command	Response
AT+CSQ	+CSQ: <rssi>,<ber></ber></rssi>
	ОК
	+CME ERROR: <err></err>
	Execution Command returns received signal strength
	indication <rssi> and channel bit error rate <ber> from the</ber></rssi>
	ME. Test Command returns values supported by the TA.
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<rssi></rssi>	0	-113dBm or less
	1	-111dBm
	230	-10953dBm
	31	-51dBm or greater
	99	Not known or not detectable
	According	to 3GPP TS 27.007 [47], the <rssi></rssi> value is not applicable to 3G networks.
	Yet, with	a view to employing +CSQ for all networks has been designed to show a
	<rssi> va</rssi>	lue derived from the 3G specific RSCP parameter is shown by AT+QENG.
	Neverthel	ess, please note that connection quality in 3G networks is depending on
	further fac	ctors. For example, despite good <rssi> or RSCP values for signal quality,</rssi>
	data throu	ughput may vary depending on the number of subscribers sharing the same
	cell.	
<ber></ber>	Channel b	pit error rate (in percent)
	07	As RXQUAL values in the table in 3GPP TS 45.008 subclause 8.2.4
	99	Not known or not detectable

Example

AT+CSQ=?

+CSQ: (0-31,99),(0-7,99)

OK

AT+CSQ

+CSQ: 28,0 //Query the current signal strength indication is 28 and

channel bit error rate is 0

OK

NOTES

After using network related commands such as **+CCWA**, **+CCFC**, users are advised to wait for 3s before entering AT+CSQ. This is recommended to ensure that any network access required for the preceding command has finished.

6.4. AT+CPOL Preferred Operator List

AT+CPOL edits and queries the list of the preferred operators.

AT+CPOL Preferred Operator Lis	st
Test Command AT+CPOL=?	Response +CPOL: (list of supported <index>s),(list of supported <format>s) OK</format></index>
Read Command AT+CPOL?	Response Query the list of the preferred operators: +CPOL: <index>,<format>,<oper> [,<gsm>,<gsm_compact,<utran>] [+CPOL: <index>,<format>,<oper> [,<gsm>,<gsm_compact,<utran>] []] OK</gsm_compact,<utran></gsm></oper></format></index></gsm_compact,<utran></gsm></oper></format></index>
Write Command AT+CPOL= <index>[,<format>[,<oper> [<gsm>,<gsm_compact>,<utran>]]]</utran></gsm_compact></gsm></oper></format></index>	Response Edit the list of the preferred operators. OK ERROR If the <index> is given but the <operator> is left out, the entry is deleted.</operator></index>
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

<index></index>	Integer type; the order number of operator in the SIM/USIM preferred operator list	
<format></format>	0	Long format alphanumeric <oper></oper>

	1	Short format alphanumeric <oper></oper>	
	-	•	
	2	Numeric <oper></oper>	
<oper></oper>	String t	g type; <format></format> indicates if the format is alphanumeric or numeric (see +COPS)	
<gsm></gsm>	GSM access technology		
	0	Access technology is not selected	
	1	Access technology is selected	
<gsm_com< td=""><td>npact></td><td>GSM compact access technology</td></gsm_com<>	npact>	GSM compact access technology	
	0	Access technology is not selected	
	1	Access technology is selected	
<utran></utran>	RAN> UTRAN access technology		
	0	Access technology is not selected	
	1	Access technology is selected	

NOTE

The configuration will be saved to NV automatically.

6.5. AT+COPN Read Operator Names

The AT+COPN command returns the list of operator names from the ME. Each operator code <numericn> that has an alphanumeric equivalent <alphan> in the ME memory is returned.

AT+COPN Read Operator Names	CON
Test Command	Response
AT+COPN=?	OK
Execution Command	Response
AT+COPN	+COPN: <numeric1>,<alpha1></alpha1></numeric1>
	[+COPN: <numeric2>,<alpha2></alpha2></numeric2>
	[]]
	ок
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	Depends on the number of operator names
Reference	
3GPP TS 27.007	

<numericn></numericn>	String type; operator in numeric format (see +COPS)
<alphan></alphan>	String type; operator in long alphanumeric format (see +COPS)

6.6. AT+CTZU Automatic Time Zone Update

Set command enables and disables automatic time zone update via NITZ. The configuration is stored to NV automatically.

AT+CTZU Automatic Time Zone Update	
Test Command	Response
AT+CTZU=?	+CTZU: (0,1)
	OK
Write Command	Response
AT+CTZU= <onoff></onoff>	OK
	ERROR
Read Command	Response
AT+CTZU?	+CTZU: <onoff></onoff>
	ОК
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

Parameter

<onoff></onoff>	Integer type, indicates the mode of automatic time zone update	
	<u>0</u>	Disable automatic time zone update via NITZ
	1	Enable automatic time zone update via NITZ

Example

AT+CTZU? +CTZU: 0

OK

AT+CTZU=? +CTZU: (0,1)

OK
AT+CTZU=1
OK
AT+CTZU?
+CTZU: 1

OK

NOTE

The configuration will be saved to NV automatically.

6.7. AT+CTZR Time Zone Reporting

This command controls the time zone reporting of changed event. If reporting is enabled the MT returns the unsolicited result code **+CTZV**: **<tz>or +CTZE**: **<tz>,<dst>,<time>** whenever the time zone is changed. The configuration is stored to NV automatically.

AT+CTZR Time Zone Reporting	
Test Command	Response
AT+CTZR=?	+CTZR: (0-2)
	OK
Write Command	Response
AT+CTZR= <reporting></reporting>	OK
	ERROR
Read Command	Response
AT+CTZR?	+CTZR: <reporting></reporting>
	OK
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

Parameter

<reporting></reporting>	Integer type, indicates the mode of time zone reporting	
	O Disable time zone reporting of changed event	
	1 Enable time zone reporting of changed event by unsolicited result code	

+CTZV: <tz>

2 Enable extended time zone reporting by unsolicited result code

+CTZE: <tz>,<dst>,<time>

<tz>

String type, represents the sum of the local time zone (difference between the local time and GMT is expressed in quarters of an hour) plus daylight saving time. The format is "±zz", expressed as a fixed width, two digit integer with the range -48 ... +56. To maintain a fixed width, numbers in the range -9 ... +9 are expressed with a leading zero, e.g. "-09", "+00" and "+09".

<dst>

Integer type, indicates whether <tz> includes daylight savings adjustment

- 0 <tz> includes no adjustment for Daylight Saving Time
- 1 <tz> includes +1 hour (equals 4 quarters in <tz>) adjustment for daylight saving time
- 2 <tz> includes +2 hours (equals 8 quarters in <tz>) adjustment for daylight saving time

<time>

String type, represents the local time. The format is "YYYY/MM/DD,hh:mm:ss", expressed as integers representing year (YYYY), month (MM), date (DD), hour (hh), minute (mm) and second (ss). This parameter can be provided by the network when delivering time zone information and will be presented in the unsolicited result code of extended time zone reporting if provided by the network.

Example

AT+CTZR=2

OK

AT+CTZR? +CTZR: 2

OK

+CTZE: "+32",0,"2013/08/23,06:51:13"

//<reporting> is 2

NOTE

The configuration will be saved to NV automatically.

6.8. AT+QLTS Obtain the Latest Network Time Synchronization

AT+QLTS is used to obtain the latest network time synchronization.

AT+QLTS Obtain the Latest Net	work Time Synchronization
Test Command AT+QLTS=?	Response OK
Execution Command AT+QLTS	Response Execution Command returns latest time for Network synchronization: +QLTS: <time>,<dst></dst></time>
Write Command AT+QLTS= <mode></mode>	Response +QLTS: <time>,<dst> OK ERROR If error is related to ME functionality +CME ERROR: <err></err></dst></time>
Maximum Response Time	300ms

<mode></mode>	Query network time mode	
	Query latest time that network synchronized	
	1 Query current GMT time calculated from the latest time that network synchronized	
	2 Query current LOCAL time calculated from the latest time network synchronized	
<time></time>	String type. Format is "YYYY/MM/DD,hh:mm:ss±zz", indicates year (two last digits),	
	month, day, hour, minutes, seconds and time zone (indicates the difference, expressed in	
	quarters of an hour, between the local time and GMT; range -48+56). E.g. 6th of May	
	2004, 22:10:00 GMT+2 hours.	
<dst></dst>	Daylight saving time. It is zero equals to "04/05/06,22:10:00+08,0"	

NOTES

If network has not synchronized the time, AT+QLTS command will only return OK

Example

AT+QLTS=? +QLTS: (0-2)	//Query supported QLTS mode
ок	

AT+QLTS //Query latest time that network synchronized

+QLTS: "14/04/29,06:30:15+32,0"

OK

AT+QLTS=0 //Query latest time that network synchronized. It's same as "AT+QLTS"

+QLTS: "14/04/29,06:30:15+32,0"

OK

AT+QLTS=1 //Query current GMT time calculated from the latest time that network synchronized

+QLTS: "14/04/29,06:40:43+32,0"

OK

AT+QLTS=2 //Query current LOCAL time calculated from the latest time network synchronized

+QLTS: "14/04/29,14:41:33+32,0"

OK

6.9. AT+QGPCLASS Change GPRS Multi-slot Class

This command is used to change GPRS multi-slot class

AT+QGPCLASS Change GPRS N	Iulti-slot Class
Test Command AT+QGPCLASS=?	Response For UG95 +QGPCLASS: (1-12) OK For UG96 +QGPCLASS: (1-12,30-33,35-38) OK
Read Command AT+QGPCLASS?	Response +QGPCLASS: <class></class>
Write Command AT+QGPCLASS= <class></class>	Response OK ERROR If error is related to ME functionality: +CME ERROR: <err></err>

Reference

Parameter

<class>

Multi-slot class of GPRS mode

NOTES

- 1. For UG95 module, the GPRS multi-slot class is in range of 1-12. The default value is 12.
- 2. For UG96 module, the GPRS multi-slot class may be 1-12, 30-33 or 35-38. The default value is 33.

Example

AT+QGPCLASS=12 //Change GPRS multi-slot class to 12

OK

AT+QGPCLASS? //Query current multi-slot class of GPRS

+QGPCLASS: 12

OK

AT+QGPCLASS=8 //Change GPRS multi-slot class to 8

OK

NOTE

The configuration will be saved to NV automatically.

7 Call Related Commands

7.1. ATA Answer an Incoming Call

ATA connects the module to an incoming voice or data call indicated by a "RING" URC.

ATA Answer an Incoming Call	
Execution Command ATA	Response TA sends off-hook to the remote station. Response in case of data call, if successfully connected CONNECT <text> TA switches to data mode. Note: <text> output only if ATX<value> parameter setting with the <value> >0. When TA returns to command mode after call release: OK Response in case of voice call, if successfully connected: OK Response if no connection: NO CARRIER</value></value></text></text>
Maximum Response Time	90s, determined by network.
Reference V.25ter	

NOTES

- 1. Any additional commands on the same command line are ignored.
- 2. This command may be aborted generally by receiving a character during execution. The aborting is not possible during some states of connection establishment such as handshaking.
- 3. See also ATX.

Example

RING //A voice call is ringing

AT+CLCC

+CLCC: 1,1,4,0,0,"02154450290",129

OK

ATA //Accept the voice call with ATA

OK

7.2. ATD Mobile Originated Call to Dial a Number

ATD can be used to set up outgoing voice and data calls. Supplementary Services can also be controlled with ATD.

ATD Mobile Originated Call to Dial a Number	
Execution Command ATD <n>[<mgsm>][;]</mgsm></n>	Response This command can be used to set up outgoing voice, data or FAX calls. It also serves to control supplementary services. If no dial tone and (parameter setting ATX2 or ATX4): NO DIALTONE If busy and (parameter setting ATX3 or ATX4): BUSY If a connection cannot be established: NO CARRIER
	If connection is successful and non-voice call. CONNECT <text> TA switches to data mode. <text> outputs only if ATX<value> parameter setting with the <value> >0 When TA returns to command mode after call release: OK If connection is successful and voice call: OK</value></value></text></text>
Maximum Response Time	5s, determined by network (AT+COLP=0).

Reference	
V.25ter	

<n></n>	String of dialing digits and optionally V.25ter modifiers	
	Dialing digits: 0-9 , * , # , + , A , B , C	
	Following V.25ter modifiers are ignored: ,(comma), T, P, !, W, @	
<mgsm></mgsm>	String of GSM modifiers:	
	I Actives CLIR (Disable presentation of own number to called party)	
	i Deactivates CLIR (Enable presentation of own number to called party)	
	G Activates closed user group invocation for this call only	
	g Deactivates closed user group invocation for this call only	
<:>	Only required to set up voice call, return to command state	

NOTES

- 1. This command may be aborted generally by receiving an **ATH** command or a character during execution. The aborting is not possible during some states of connection establishment such as handshaking.
- 2. Parameter "I" and "i" only if no *# code is within the dial string.
- 3. See **ATX** command for setting result code and call monitoring parameters.
- 4. <n> is default value for last number that can be dialed by ATDL.
- 5. Responses returned after dialing with ATD.
 - For voice call two different responses mode can be determined. TA returns "OK" immediately either after dialing was completed or after the call was established. The setting is controlled by **AT+COLP**. Factory default is **AT+COLP**=0, which causes the TA returns "OK" immediately after dialing was completed, otherwise TA will return "OK", "BUSY", "NO DIAL TONE", "NO CARRIER".
- 6. Using ATD during an active voice call:
 - When a user originates a second voice call while there is already an active voice call, the first call will be automatically put on hold.
 - The current states of all calls can be easily checked at any time by using the AT+CLCC command.

Example

ATD10086;	//Dialing out the party's number
OK	

7.3. ATH Disconnect Existing Connection

ATH disconnects circuit switched data calls or voice calls. AT+CHUP is also used to disconnect the voice call.

ATH Disconnect Existing Connection	
Execution Command ATH[n]	Response Disconnect existing call by local TE from command line and terminate call. OK
Maximum Response Time	90s, determined by network.
Reference V.25ter	

Parameter

< n> 0	Disconnect from line	and terminate call
------------------	----------------------	--------------------

7.4. AT+CVHU Voice Hang Up Control

AT+CVHU controls whether ATH can be used to disconnect the voice call.

AT+CVHU Voice Hang Up Control	
Test Command	Response
AT+CVHU=?	+CVHU: (list of supported <mode>s)</mode>
	OK
Read Command	Response
AT+CVHU?	+CVHU: <mode></mode>
	OK
Write Command	Response
AT+CVHU= <mode></mode>	ОК
	ERROR
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<mode></mode>	0	ATH is disconnected
	1	ATH is ignored but "OK" response is returned

7.5. AT+CHUP Hang Up Call

AT+CHUP cancels all voice calls in the state of Active, Waiting and Held. For data connections, use ATH.

AT+CHUP Hang Up Call	
Test Command	Response
AT+CHUP=?	OK
Execution Command	Response
AT+CHUP	OK
	ERROR
Maximum Response Time	90s, determined by network.
Reference	
3GPP 27.007	

Example

RING	//Incoming call	
AT+CHUP OK	//Hang up call	

7.6. +++ Switch From Data Mode to Command Mode

The +++ character sequence causes the module to switch from data mode to AT command mode. It allows inputting AT commands while maintaining the data connection with the remote device.

+++ Switch From Data Mode to Command Mode	
Execution Command	Response
+++	This command is only available during TA is in data mode.
	The"+++" character sequence causes the TA to cancel the
	data flow over the AT interface and switch to command mode.
	This allows you to enter AT command while maintaining the
	data connection with the remote server or, accordingly, the
	packet domain connection.

	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

NOTES

- 1. To prevent the "+++" escape sequence from being misinterpreted as data, it should comply to following sequence:
 - Do not input any character within T1 time (1000ms) before inputting "+++".
 - Input "+++" within 1000ms, and no other characters can be inputted during this time.
 - Do not input any character within T1 time (1000ms) after "+++" has been inputted.
 - Switch to command mode, otherwise return to step 1.
- 2. To return from command mode back to data mode: Enter ATO
 - Another way to change to command mode is through DTR, refer to AT&D command for details.

7.7. ATO Switch From Command Mode to Data Mode

ATO resumes the connection and switches back from command mode to data mode.

ATO Switch From Command Mode to Data Mode		
Execution Command ATO[n]	Response TA resumes the connection and switches back from command mode to data mode.	
	If connection is not successfully resumed: NO CARRIER else TA returns to data mode from command mode CONNECT <text></text>	
Maximum Response Time	300ms	
Reference V.25ter		

Parameter

|--|

NOTE

TA returns to data mode from command mode **CONNECT <text>**, only if **ATX** parameter is set as value>0.

7.8. ATS0 Set Number of Rings before Automatically Answering Call

ATS0 controls automatic answering mode for the incoming calls.

ATS0 Set Number of Rings Before Automatically Answering Call	
Read Command	Response
ATS0?	<n></n>
	ок
Write Command	Response
ATS0= <n></n>	This parameter setting determines the number of rings before
	auto-answer.
	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

Parameter

<n></n>	<u>0</u>	Automatic answering is disabled
	1-255	Enable automatic answering on the ring number specified

NOTE

If <n> is set too high, the calling party may hang up before the call is answered automatically.

Example

ATS0=3 OK	//Set three rings before automatically answering a call
RING	//Call coming
RING	

RING	//Automatically answering the call after three rings

7.9. ATS6 Set Pause Before Blind Dialing

ATS6 is implemented for compatibility reasons only, and has no effect.

ATS6 Set Pause Before Blind Dialing	
Read Command	Response
ATS6?	<n></n>
	ок
Write Command	Response
ATS6= <n></n>	ОК
Maximum Response Time	300ms
Reference V.25ter	

Parameter

|--|

7.10. ATS7 Set Number of Seconds to Wait for Connection Completion

ATS7 specifies the amount of time to wait for the connection completion in case of answering or originating a call. If no connection is established during this time, the module disconnects from the line.

ATS7 Set Number of Seconds to	Wait for Connection Completion
Read Command	Response
ATS7?	<n></n>
	OK
Write Command	Response
ATS7= <n></n>	This parameter setting determines the amount of time to wait
	for the connection completion in case of answering or
	originating a call.
	ОК

Maximum Response Time	300ms
Reference	
V.25ter	

<n></n>	<u>0</u>	Disabled
	1-255	Number of seconds to wait for connection completion

7.11. ATS8 Set the Number of Seconds to Wait for Comma Dial Modifier

ATS8 is implemented for compatibility reasons only, and has no effect.

ATS8 Set the Number of Seconds to Wait for Comma Dial Modifier	
Read Command	Response
ATS8?	<n></n>
	ок
Write Command	Response
ATS8= <n></n>	ОК
Maximum Response Time	300ms
Reference	
V.25ter	

Parameter

<n></n>	0	No pause when comma encountered in dial string
	1- <u>2</u> -255	Number of seconds to wait

7.12. ATS10 Set Disconnect Delay after Indicating the Absence of Data Carrier

ATS10 determines the amount of time, which the UE remains connected in absence of a data carrier.

ATS10 Set Disconnect Delay after Indicating the Absence of Data Carrier		
Read Command	Response	
ATS10?	<n></n>	
	ок	
Write Command	Response	
ATS10= <n></n>	This parameter setting determines the amount of time that the	
	TA will remain connected in absence of data carrier. If the	
	data carrier is once more detected before disconnection, the	
	TA remains connected.	
	OK	
Maximum Response Time	300ms	
Reference		
V.25ter		

Parameter

<n></n>	1- <u>15</u> -254	Number of tenths of seconds to wait before disconnecting after UE has indicated
		the absence of received line signal

7.13. AT+CBST Select Bearer Service Type

AT+CBST write command selects the bearer service **<name>**, the data rate **<speed>** and the connection element **<ce>** to be used when data calls are originated.

AT+CBST Select Bearer Service Type	
Test Command	Response
AT+CBST=?	+CBST: (list of supported <speed></speed> s) ,(list of supported <name></name> s) ,(list of supported <ce></ce> s)
	OK
Read Command	Response
AT+CBST?	+CBST: <speed>,<name>,<ce></ce></name></speed>

	ок
Write Command AT+CBST=[<speed>[,<name>[,<ce>]]]</ce></name></speed>	Response TA selects the bearer service <name> with data rate <speed>, and the connection element <ce> to be used when data calls are originated. OK</ce></speed></name>
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

<speed></speed>	<u>0</u>	Automatic selection of the speed; this setting is possible in case of 3.1kHz modem
	4	and non-transparent service
		2400 bps (V.22bis)
	5	2400 bps (V.26ter)
	6	4800 bps (V.32)

	3	Both, non-transparent preferred
	J	botti, non-transparent preferred

NOTE

3GPP TS 22.002 lists the allowed combinations of the sub-parameters.

7.14. AT+CSTA Select Type of Address

AT+CSTA write command selects the type of number for further dialing commands ATD according to 3GPP Technical Specifications. Test command returns values supported a compound value.

AT+CSTA Select Type of Addres	s
Test Command	Response
AT+CSTA=?	+CSTA: (list of supported <type>s)</type>
	ОК
Read Command	Response
AT+CSTA?	+CSTA: <type></type>
	ОК
Write Command	Response
AT+CSTA= <type></type>	ОК

Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<type></type>	128-129-255 Current address type settings, e.g:	
	129	Unknown type
	145	International type (contains the character "+")

7.15. AT+CLCC List Current Calls of ME

The execution command returns the list of all current calls. If the command is executed successfully, but no calls are existed, no information but OK response is sent to the TE.

AT+CLCC List Current Calls of M	ME A STATE OF THE
Test Command	Response
AT+CLCC=?	ОК
Execution Command	Response
AT+CLCC	TA returns a list of current calls of ME. If command execute successfully but no calls are existed, no information but OK response is sent to TE. [+CLCC: <id1>,<dir>,<stat>,<mode>,<mpty>[,<number>,<type>[,<alpha>]] [+CLCC: <id2>,<dir>,<stat>,<mode>,<mpty>[,<number>,<type>[,<alpha>]] []</alpha></type></number></mpty></mode></stat></dir></id2></alpha></type></number></mpty></mode></stat></dir></id1>
	OK If error is related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms

<idx></idx>	Intege	r type; call identification number as described in 3GPP TS 22.030 sub clause 4.5.5.1;
	this number can be used in AT+CHLD command operations	
<dir></dir>	0	Mobile originated (MO) call
	1	Mobile terminated (MT) call
<stat></stat>	State	of the call
	0	Active
	1	Held
	2	Dialing (MO call)
	3	Alerting (MO call)
	4	Incoming (MT call)
	5	Waiting (MT call)
<mode></mode>	Beare	r/tele service
	0	Voice
	1	Data
	2	FAX
<mpty></mpty>	0	Call is not one of multiparty (conference) call parties
	1	Call is one of multiparty (conference) call parties
<number></number>	Phone	e number in string type in format specified by <type></type>
<type></type>	Type of address of octet in integer format(Refer to 3GPP TS 24.008, sub clause	
	for det	ails). Usually, it has three kinds of values:
	129	Unknown type
	145	International type(contains the character "+")
	161	National type
<alpha></alpha>	Alphar	numeric representation of <number> corresponding to the entry found in phonebook</number>

7.16. AT+CR Service Reporting Control

AT+CR controls the module whether or not to transmit an intermediate result code +CR: <serv> to the TE when a call is being set up.

If it is enabled, an intermediate result code is transmitted at the point during connect negotiation at which the TA has determined which speed and quality of service will be used, before any error control or data compression reports are transmitted, and before any final result code (e.g. **CONNECT**) is transmitted.

AT+CR Service I	Reporting Control
Test Command	Response
AT+CR=?	+CR: (list of supported <mode>s)</mode>
	ОК

Read Command	Response
AT+CR?	+CR: <mode></mode>
	OK
Muita Camana in d	
Write Command	Response
AT+CR=[<mode>]</mode>	TA controls whether or not intermediate result code +CR:
	<serv> is returned from the TA to the TE when a call set up.</serv>
	ок
Maximum Response Time	300ms
Reference	
3GPP TS 27.007

<mode></mode>	<u>0</u>	Disable
	1	Enable
<serv></serv>	ASYNC	Asynchronous transparent
	SYNC	Synchronous transparent
	RELASYNC	Asynchronous non-transparent
	REL SYNC	Synchronous non-transparent
	GPRS	GPRS

7.17. AT+CRC Set Cellular Result Codes for Incoming Call Indication

AT+CRC controls whether or not to use the extended format of incoming call indication.

When it is enabled, an incoming call is indicated to the TE with unsolicited result code **+CRING**: **<type>** instead of the normal **RING**.

AT+CRC Set Cellular Result Codes for Incoming Call Indication	
Test Command	Response
AT+CRC=?	+CRC: (list of supported <mode>s)</mode>
	ок
Read Command	Response
AT+CRC?	+CRC: <mode></mode>
	OK
Write Command	Response
AT+CRC=[<mode>]</mode>	TA controls whether or not the extended format of incoming

	call indication is used. OK
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

<mode></mode>	<u>0</u>	Disable extended format
	1	Enable extended format
<type></type>	ASYNC	Asynchronous transparent
	SYNC	Synchronous transparent
	RELASYNC	Asynchronous non-transparent
	REL SYNC	Synchronous non-transparent
	VOICE	Voice

Example

AT+CRC=1 OK	//Enable extended format
+CRING: VOICE ATH OK	//Indicate incoming call to the TE
AT+CRC=0 OK	//Disable extended format
RING ATH OK	//Indicate incoming call to the TE

7.18. AT+CRLP Select Radio Link Protocol Parameter

AT+CRLP write command sets radio link protocol (RLP) parameters used when non-transparent data calls are originated.

AT+CRLP Select Radio Link Protocol Parameter	
Test Command	Response
AT+CRLP=?	+CRLP:
	(list of supported <iws>s),(list of supported <mws>s),(list of</mws></iws>

	supported <t1>s),(list of supported <n2>s)</n2></t1>
	ок
Read Command	Response
AT+CRLP?	+CRLP: <iws>,<mws>,<t1>,<n2></n2></t1></mws></iws>
	OK
Write Command	Response
AT+CRLP=[<iws>[,<mws>[,<t1>[,<n2< td=""><td>TA sets radio link protocol (RLP) parameters used when</td></n2<></t1></mws></iws>	TA sets radio link protocol (RLP) parameters used when
>]]]]	non-transparent data calls are set up.
	OK
Maximum Response Time	300ms
Reference	
3GPP TS27.007	

<iws></iws>	0- <u>61</u>	Interworking window size (IWF to MS)	
<mws></mws>	0- <u>61</u>	Mobile window size (MS to IWF)	
<t1></t1>	39- <u>48</u> -255	Acknowledgment timer T1 in a unit of 10ms	
<n2></n2>	1- <u>6</u> -255	Retransmission attempts	

7.19. AT+QHUP Hang up Call with a Specific Release Cause

AT+QHUP can terminate call(s) with a specific 3GPP TS 24.008 release cause specified by host (Including voice and data calls).

AT+QHUP Hang up Call with a Specific Release Cause		
Test Command	Response	
AT+QHUP=?	ОК	
Write Command	Response	
AT+QHUP= <cause>[,<idx>]</idx></cause>	ОК	
	ERROR	
	If error is related to ME functionality:	
	+CME ERROR: <err></err>	

<cause></cause>	Release o	cause, 3GPP TS 24.008 release cause to be indicated to the network.
	1	Release cause "unassigned (unallocated) number"
	16	Release cause "normal call clearing"
	17	Release cause "user busy"
	18	Release cause "no user responding"
	21	Release cause "call rejected"
	27	Release cause "destination out of order"
	31	Release cause "normal, unspecified"
	88	Release cause "incompatible destination"
<idx></idx>	Call identification number is an optional index in the list of current calls indicat	
	+CLCC. +	QHUP will terminate the call identified by the given call number. The default
	call number	er 0 is not assigned to any call, but signifies all calls.
	<u>0</u>	Terminate all known calls. However, if circuit switches data calls and
		voice calls at the same time, this command only terminates the CSD
		calls.
	17	Terminate the specific call with identification number.

7.20. AT+QECCNUM Configure Emergency Call Numbers

AT+QECCNUM can be used to query, add, delete and replace ECC numbers (emergency call numbers). There are two kinds of ECC numbers, always valid ECC numbers and ECC numbers valid only without SIM. The default always valid ECC numbers are 911 and 112. The default ECC numbers without SIM are 00, 08, 110, 999, 118 and 119. The always valid ECC number 911 and 112 cannot be deleted. ECC numbers can be saved into NV automatically. If the SIM card contains ECC File, the numbers in ECC File can also be regarded as ECC numbers.

The maximal supported ECC numbers of each type is 20.

AT+QECCNUM Configure Emergency Call Numbers	
Test Command	Response
AT+QECCNUM=?	+QECCNUM: (0-3)
	OK
Write Command	Response
AT+QECCNUM= <mode>,<type>[,<ecc< th=""><td>If <mode> is equal to 0, query the ECC numbers,</mode></td></ecc<></type></mode>	If <mode> is equal to 0, query the ECC numbers,</mode>
num1>[, <eccnum2>,[,<eccnumn>]]</eccnumn></eccnum2>	<eccnumn> should be omitted, return:</eccnumn>
]	+QECCNUM: <type>,<eccnum1>,<eccnum2>[]</eccnum2></eccnum1></type>
	ок

	If <mode> is not equal to 0: <mode>=1 is used to add the ECC number; <mode>=2 is used to delete the ECC number. In this case, at least one ECC number <eccnumn> should be inputted, returns: OK ERROR If <mode> =3 is used to replace the specified ECC number</mode></eccnumn></mode></mode></mode>
	chosen by <type>. In this case, at least one ECC number <eccnumn> should be inputted, returns:</eccnumn></type>
	OK

	145 International type(contains the character "+")	
	161 National type	
<text></text>	String type, field of maximum length <tlength> in current TE character set specified by</tlength>	
	+CSCS	

8.4. AT+CPBS Select Phonebook Memory Storage

AT+CPBS selects phonebook memory storage, which is used by other phonebook commands. Read command returns currently selected memory, and number of used locations and total number of locations in the memory when supported by manufacturer. Test command returns supported storages as compound value.

AT+CPBS Select Phonebook Memory Storage	
Test Command	Response
AT+CPBS=?	+CPBS: (list of supported <storage>s)</storage>

Example

AT+CSCS="GSM"

OK

AT+CPBW=10,"15021012496",129,"QUECTEL"

OK //Make a new phonebook entry at location 10

AT+CPBW=10 //Delete entry at location 10

OK

9 Short Message Service Commands

9.1. AT+CSMS Select Message Service

AT+CSMS selects message service <service> and returns the types of messages supported by the ME.

AT+CSMS Select Message Service			
Test Command AT+CSMS=?	Response +CSMS: (list of supported <service>s) OK</service>		
Read Command AT+CSMS?	Response +CSMS: <service>,<mt>,<mo>,<bm> OK</bm></mo></mt></service>		
Write Command AT+CSMS= <service></service>	Response +CSMS: <mt>,<mo>,<bm> OK If error is related to ME functionality: +CMS ERROR: <err></err></bm></mo></mt>		
Maximum Response Time	300ms		
Reference 3GPP TS 27.005			

Parameter

<service></service>	Type of m	Type of message service	
	<u>0</u>	3GPP TS 23.040 and 3GPP TS 23.041 (the syntax of SMS AT commands is	
		compatible with 3GPP TS 27.005 Phase 2 version 4.7.0; Phase 2+ features	
		which do not require new command syntax may be supported, e.g. correct	
		routing of messages with new Phase 2+ data coding schemes)	
	1	3GPP TS 23.040 and 3GPP TS 23.041 (the syntax of SMS AT commands is	
		compatible with 3GPP TS 27.005 Phase 2+ version; the requirement of	

		<service></service>	setting	1	is	mentioned	under	corresponding	command
		description-	s)						
<mt></mt>	Mobile terr	ninated mess	ages						
	0	Type not su	pported						
	<u>1</u>	Type suppo	rted						
<mo></mo>	Mobile orig	jinated messa	iges						
	0	Type not su	pported						
	<u>1</u>	Type suppo	rted						
 	Broadcast	type message	es						
	0	Type not su	pported						
	<u>1</u>	Type suppo	rted						

Example

AT+CSMS=? +CSMS: (0,1)	//Test command
OK AT+CSMS=1 +CSMS: 1,1,1	//Set type of message service as 1
OK AT+CSMS? +CSMS: 1,1,1,1	//Read command
ок	

9.2. AT+CMGF Message Format

AT+CMGF specifies the input and output format of the short messages. <mode> indicates the format of messages used with send, list, read and write commands and unsolicited result codes resulting from received messages.

Mode can be either PDU mode (entire TP data units used) or text mode (headers and body of the messages given as separate parameters). Text mode uses the value of parameter **<chset>** specified by command **+CSCS** to inform the character set to be used in the message body in the TA-TE interface.

AT+CMGF Message Format	
Test Command AT+CMGF=?	Response +CMGF: (list of supported <mode>s)</mode>
	ок

Response
+CMGF: <mode></mode>
OK.
OK
Response
TA sets parameter to denote which kind of I/O format of
messages is used.
ОК
300ms

<mode></mode>	<u>0</u>	PDU mode	
	1	Text mode	

9.3. AT+CSCA Service Center Address

AT+CSCA write command updates the SMSC address when mobile originated SMS are transmitted. In text mode, the setting is used by write commands. In PDU mode, setting is used by the same commands, but only when the length of the SMSC address is coded into the **<pdu>** parameter which equals to zero.

AT+CSCA Service Center Address	
Test Command	Response
AT+CSCA=?	ОК
Read Command	Response
AT+CSCA?	+CSCA: <sca>,<tosca></tosca></sca>
	OK
Write Command	Response
AT+CSCA= <sca>[,<tosca>]</tosca></sca>	ОК
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.005	

<sca></sca>	Service center address. 3GPP TS 24.011 RP SC address Address-Value field in string
	format; BCD numbers (or GSM 7 bit default alphabet characters) are converted to
	characters of the currently selected TE character set (refer to command +CSCS in
	3GPP TS 27.007); type of address is given by <tosca></tosca>
<tosca></tosca>	Type of service center address. 3GPP TS 24.011 RP SC address Type-of-Address
	octet in integer format (default refer to <toda>)</toda>

Example

AT+CSCA="+8613800210500",145	//Set SMS service center address
OK	
AT+CSCA?	//Query SMS service center address

AT+CSCA? //Query SWIS Service certier address

+CSCA: "+8613800210500",145

OK

NOTE

The configuration will be saved to NV automatically.

9.4. AT+CPMS Preferred Message Storage

AT+CPMS selects memory storages <mem1>, <mem2> and <mem3> for reading, writing, etc..

AT+CPMS Preferred Message Storage	
Test Command AT+CPMS=?	Response +CPMS: (list of supported <mem1>s),(list of supported <mem2>s),(list of supported <mem3>s) OK</mem3></mem2></mem1>
Read Command AT+CPMS?	Response +CPMS: <mem1>,<used1>,<total1>,<mem2>,<used2>,<total2>,<mem3>,<used3>,<total3> OK</total3></used3></mem3></total2></used2></mem2></total1></used1></mem1>
Write Command	Response
AT+CPMS= <mem1>[,<mem2>[,<mem< th=""><th>TA selects memory storages <mem1>, <mem2> and</mem2></mem1></th></mem<></mem2></mem1>	TA selects memory storages <mem1>, <mem2> and</mem2></mem1>

3>]]	<pre><mem3> to be used for reading, writing, etc. +CPMS: <used1>,<total1>,<used2>,<total2>,<used3>,<total3></total3></used3></total2></used2></total1></used1></mem3></pre>
	ок
	If error is related to ME functionality:
	+CMS ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.005	

<mem1></mem1>	Messages to be read and deleted from this memory storage	
	"BM"	Broadcast message storage
	<u>"SM"</u>	SIM message storage
	"SR"	Status report storage
<mem2></mem2>	Messages v	will be written and sent to this memory storage
	<u>"SM"</u>	SIM message storage
<mem3></mem3>	Storage to	which received SMs are preferred to be stored (unless forwarded directly to
	TE. Refer of	command New Message Indications +CNMI). Refer to <mem1> for defined</mem1>
	values. Received CBMs are always stored in "BM" (or some manufacturer specific	
	storage) unless directly forwarded to TE. Received status reports are always stored in	
	"SR" (or so	me manufacturer specific storage) unless directly forwarded to TE.
	"BM"	Broadcast message storage
	<u>"SM"</u>	SIM message storage
	"SR"	Status report storage
<usedx></usedx>	Integer type, number of current messages in <memx></memx>	
<totalx></totalx>	Integer type	e, total number of messages which can be stored in <memx></memx>

Example

AT+CPMS="SM","SM","SM" //Set SMS message storage as "SM"

+CPMS: 0,50,0,50,0,50

OK

AT+CPMS? //Query the currently SMS message storage

+CPMS: "SM",0,50,"SM",0,50,"SM",0,50

OK

9.5. AT+CMGD Delete Message

AT+CMGD deletes a short message from the preferred message storage <mem1> location <index>. If <delflag> is presented and not set to 0, then the ME shall ignore <index> and follow the rules of <delflag> shown as below.

AT+CMGD Delete Message	
Test Command	Response
AT+CMGD=?	+CMGD: (list of supported <index>s),(list of supported</index>
	<delflag>s)</delflag>
	ок
Write Command	Response
AT+CMGD= <index>[,<delflag>]</delflag></index>	TA deletes message from preferred message storage
	<mem1> location <index>.</index></mem1>
	OK
	If error is related to ME functionality:
	+CMS ERROR: <err></err>
	300ms.
Maximum Response Time	Note: Operation of <delflag> depends on the storage of</delflag>
	deleted messages.
Reference	
3GPP TS 27.005	

Parameter

<index></index>	Integer type, in the range of location numbers supported by the associated memory	
<delflag></delflag>	0	Delete message specified in <index></index>
	1	Delete all read messages from <mem1> storage, leaving unread messages and</mem1>
		stored mobile originated messages (whether sent or not) untouched
	2	Delete all read messages from <mem1> storage and sent mobile originated</mem1>
		messages, leaving unread messages and unsent mobile originated messages untouched
	3	Delete all read messages from <mem1> storage, sent and unsent mobile</mem1>
	C	originated messages, leaving unread messages untouched
	4	Delete all messages from <mem1> storage</mem1>

Example

AT+CMGD=1	//Delete message specified in <index>=1</index>
ОК	

AT+CMGD=1,4	//Delete all messages from <mem1> storage</mem1>
ОК	

9.6. AT+CMGL List Messages

AT+CMGL write command returns messages with status value **<stat>** from preferred message storage **<mem1>** to the TE. If the status of the message is "REC UNREAD", the status in the storage changes to "REC READ". When executing command AT+CMGL without status value **<stat>**, it will report the list of SMS with "REC UNREAD" status.

AT+CMGL List Message	es ·
Test Command	Response
AT+CMGL=?	+CMGL: (list of supported <stat>s)</stat>
	ок
Write Command	Response

time-string format (refer to **<dt>**)

<toda> Type of recipient address. 3GPP TS 24.011 TP-Recipient-Address Type-of-Address

octet in integer format.

<tooa> Type of originating address. 3GPP TS 24.011 TP-Originating-Address

Type-of-Address octet in integer format (default refer to <toda>)

<length> Message length, integer type, indicating in the text mode (**+CMGF**=1) the length of the message body **<data>** (or **<cdata>**) in characters; or in PDU mode (**+CMGF**=0),

the length of the actual TP data unit in octets (i.e. the RP layer SMSC address octets

are not counted in the length)

In the case of SMS: 3GPP TS 23.040 TP-User-Data in text mode responses; format:

- If **<dcs>**, indicates that 3GPP TS 23.038 GSM 7 bit default alphabet is used and **<fo>** indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set

- If TE character set other than "HEX" (refer to command Select TE Character Set +CSCS in 3GPP TS 27.007): ME/TA converts GSM alphabet into current TE character set according to rules of Annex A
- If TE character set is "HEX": ME/TA converts each 7-bit character of GSM 7 bit default alphabet into two IRA character long hexadecimal number (e.g. character Π (GSM 7 bit default alphabet 23) is presented as 17 (IRA 49 and 55))
- If <dcs>, indicates that 8-bit or UCS2 data coding scheme is used, or <fo> indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65))

In the case of CBS: 3GPP TS 23.041 CBM Content of Message in text mode responses; format:

- If **<dcs>**, indicates that 3GPP TS 23.038 GSM 7 bit default alphabet is used:
- If TE character set other than "HEX" (refer to command +CSCS in 3GPP TS27.007): ME/TA converts GSM alphabet into current TE character set according to rules of Annex A
- If TE character set is "HEX": ME/TA converts each 7-bit character of the GSM 7 bit default alphabet into two IRA character long hexadecimal number
- If <dcs>, indicates that 8-bit or UCS2 data coding scheme is used: ME/TA converts each 8-bit octet into two IRA character long hexadecimal number

In the case of SMS: 3GPP TS 24.011 SC address followed by 3GPP TS 23.040 TPDU

<pd><pdu>

<data>

in hexadecimal format: ME/TA converts each octet of TP data unit into two IRA character long hexadecimal number (e.g. octet with integer value 42 is presented to TE as two characters 2A (IRA 50 and 65))3GPP TS 27.007

Example

AT+CMGF=1	//Set SMS message format as text mode	
OK		
AT+CMGL="ALL"	//List all messages from message storage

<This is a test from Quectel>

OK

9.8. AT+CMGS Send Message

AT+CMGS write command sends a short message from TE to network (SMS-SUBMIT). After invoking the write command, wait for the prompt ">" and then start to write the message. Then enter **<CTRL-Z>** to indicate the ending of PDU and begin to send the message. Sending can be cancelled by giving **<ESC>** character. Abortion is acknowledged with "**OK**", though the message will not be sent. The message reference **<mr>>** is returned to the TE on successful message delivery. The value can be used to identify message upon unsolicited delivery status report result code.

AT+CMGS Send Message		
Test Command	Response	
AT+CMGS=?	OK	
Write Command	Response	
1) If text mode (+CMGF=1):	TA sends message from a TE to the network (SMS-SUBMIT).	
AT+CMGS= <da>[,<toda>]<cr></cr></toda></da>	Message reference value <mr> is returned to the TE on</mr>	
text is entered	successful message delivery. Optionally (when +CSMS	
<ctrl-z esc=""></ctrl-z>	<pre><service> value is 1 and network supports) <scts> is</scts></service></pre>	
ESC quits without sending	returned. Values can be used to identify message upon unsolicited delivery status report result code.	
2) If PDU mode (+CMGF=0):	If text mode (+CMGF=1) and sent successfully:	
AT+CMGS= <length><cr></cr></length>	+CMGS: <mr></mr>	
PDU is given <ctrl-z esc=""></ctrl-z>		
	ОК	
	If PDU mode (+CMGF=0) and sent successfully:	
	+CMGS: <mr></mr>	
	OK	
	If error is related to ME functionality:	
	+CMS ERROR: <err></err>	
Maximum Response Time	120s, determined by network.

+CMGW: 6

OK

9.11. AT+CNMA New Message Acknowledgement to UE/TE

AT+CNMA write and execute command confirms successful receipt of a new message (SMS-DELIVER or SMS-STATUS-REPORT) routed directly to the TE. If the UE does not receive acknowledgement within the required time (net-work timeout), then it will send a "RP-ERROR" message to the network. The UE will automatically disable rout to the TE by setting both <mt> and <ds> values of AT+CNMI to 0.

AT+CNMA New Message Acknowledgement to UE/TE

If TE is inactive (e.g. DTR signal is OFF), receiving message should be done as specified in 3GPP TS 23.038. OK ERROR If error is related to ME functionality: +CMS ERROR: <err></err>
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

<mode>

- Buffer unsolicited result codes in the TA. If TA result code buffer is full, indications can be buffered in some other place or the oldest indications may be discarded and replaced with the new received indications
- Discard indication and reject new received message unsolicited result codes when TA-TE link is reserved (e.g. in on-line data mode). Otherwise forward them directly to the TE
- Buffer unsolicited result codes in the TA when TA-TE link is reserved (e.g. in on-line data mode) and flush them to the TE after reservation. Otherwise forward them directly to the TE

<mt>

The rules for storing received SMs depend on its data coding scheme (refer to 3G PPTS 23.038), preferred memory storage (+CPMS) setting and the value is:

- 0 No SMS-DELIVER indications are routed to the TE
- If SMS-DELIVER is stored into ME/TA, indication of the memory location is routed to the TE by using unsolicited result code: +CMTI: <mem>,<index>
- SMS-DELIVERs (except class 2) are routed directly to the TE using unsolicited result code: +CMT: [<alpha>],<length><CR><LF><pdu> (PDU mode enabled) or +CMT:<alpha>],<scts>[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>]<CR><LF><data> (Text mode enabled; about parameters in italics, refer to Command Show Text Mode Parameters +CSDH). Class 2 messages result in indication as defined in <mt>=1
- Class 3 SMS-DELIVERs are routed directly to TE by using unsolicited result codes defined in <mt>=2. Messages of other classes result in indication as defined in <mt>=1

bm>

The rules for storing received CBMs depend on its data coding scheme (refer to 3 GPP TS 23.038), the setting of Select CBM Types (+CSCB) and the value is:

- O No CBM indications are routed to the TE
- 1 If CBM is stored into ME/TA, indication of the memory location is routed to the TE using unsolicited result code:
 - +CBMI: <mem>,<index>
- 2 New CBMs are routed directly to the TE using unsolicited result code:
 - **+CBM: <length><CR><LF><pdu>** (PDU mode)
 - **+CBM:** <sn>,<mid>,<dcs>,<page>,<pages><CR><LF><data> (text mode)
- Class 3 CBMs are routed directly to TE using unsolicited result codes defined in
 bm>=2. If CBM storage is supported, messages of other classes result in indication as defined in **bm>=1**.

<ds>

- O No SMS-STATUS-REPORTs are routed to the TE
- 1 SMS-STATUS-REPORTs are routed to the TE using unsolicited result code:
 - +CDS: <length><CR><LF><pdu> (PDU mode)
 - +CDS: <fo>,<mr>,[<ra>],[<tora>],<scts>,,<st> (text mode)
- If SMS-STATUS-REPORT is stored into ME/TA, indication of the memory location is routed to the TE using unsolicited result code:
 - +CDSI:<mem>,<index>

 	<u>0</u>	TA buffer of unsolicited result codes defined within this command is flushed to the
		TE when <mode> 12 is entered ("OK" response shall be given before flushing</mode>
		the codes)
	1	TA buffer of unsolicited result codes defined within this command is cleared when
		<mode> 12 is entered</mode>

NOTE

Unsolicited result code.	
+CMTI: <mem>,<index></index></mem>	Indicates that new message has been received
+CMT: [<alpha>],<length><cr><lf><pdu></pdu></lf></cr></length></alpha>	Short message is outputted directly
+CBM: <length><cr><lf><pdu></pdu></lf></cr></length>	Cell broadcast message is outputted directly

+CBMI: <mem>,<index> Cell broadcast message is stored and routed to the TE

Example

AT+CMGF=1	//Set SMS message format as text mode	
ОК		
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE	
OK		
AT+CNMI=1,2,0,1,0	//Set SMS-DELIVERs are routed directly to the TE	
OK		
+CMT: "+8615021012496",,"2014/03/18 17:07:21+32"		
This is a test from Quectel.	//Short message is outputted directly when SMS is incoming.	

9.13. AT+CSCB Select Cell Broadcast Message Types

AT+CSCB write command selects which types of CBMs are to be received by the ME. The command writes the parameters in non-volatile memory.

AT+CSCB Select Cell Broadcas	t Message Types
Test Command	Response
AT+CSCB=?	It returns supported modes as a compound value.
	+CSCB: (list of supported <mode>s)</mode>
	OK
Read Command	Response
AT+CSCB?	+CSCB: <mode>,<mids>,<dcss></dcss></mids></mode>
	OK

Write Command	Response
AT+CSCB= <mode>[,mids>[,<dcss>]]</dcss></mode>	TA selects which types of CBMs are to be received by the ME. OK
	If error is related to ME functionality: +CMS ERROR: <err></err>
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

<mode></mode>	Message types specified in <mids> and <dcss> are accepted</dcss></mids>	
	1 Message types specified in <mids> and <dcss> are not accepted</dcss></mids>	
<mids></mids>	String type, all different possible combinations of CBM message identifiers (refer to <mid>)</mid>	
	(default is empty string), e.g. "0,1,5,320-478,922"	
<dcss></dcss>	String type, all different possible combinations of CBM data coding schemes (refer to	
	<dcs>) (default is empty string), e.g. "0-3,5"</dcs>	

9.14. AT+CSDH Show SMS Text Mode Parameters

AT+CSDH write command controls whether or not detailed header information is shown in text mode result codes.

AT+CSDH Show SMS Text Mode	Parameters
Test Command	Response
AT+CSDH=?	+CSDH: (list of supported <show>s)</show>
	ок
Read Command	Response
AT+CSDH?	+CSDH: <show></show>
	ОК
Write Command	Response
AT+CSDH= <show></show>	ОК
	ERROR
Maximum Response Time	300ms
Reference	
3GPP TS 27.005	

<show></show>	<u>0</u>	Do not show header values defined in commands +CSCA and +CSMP (<sca>,</sca>
		<tosca>, <fo>, <vp>, <pid> and <dcs>) nor <length>, <toda> or <tooa> in</tooa></toda></length></dcs></pid></vp></fo></tosca>
		+CMT, +CMGL, +CMGR result codes for SMS-DELIVERs and SMS-SUBMITs in
		text mode
	1	Show the values in result codes

Example

AT+CSDH=0

OK

AT+CMGR=2

+CMGR: "STO UNSENT","", <This is a test from Quectel>

OK

AT+CSDH=1

OK

AT+CMGR=2

+CMGR: "STO UNSENT","",,128,17,0,0,143,"+8613800551500",145,18

<This is a test from Quectel>

OK

9.15. AT+CSMP Set SMS Text Mode Parameters

AT+CSMP is used to set values for additional parameters needed when a short message is sent to the network or placed in a storage in text mode.

AT+CSMP Set SMS Text Mode Pa	arameters
Test Command	Response
AT+CSMP=?	
	OK
Read Command	Response
AT+CSMP?	+CSMP: <fo>,<vp>,<pid>,<dcs></dcs></pid></vp></fo>
	ОК
Write Command	Response
AT+CSMP=[<fo>[,<vp>[,<pid>[,<dcs>]</dcs></pid></vp></fo>	TA selects values for additional parameters needed when SM
111	is sent to the network or placed in a storage when text mode
	is selected (+CMGF=1). It is possible to set the validity period

	starting from when the SM is received by the SMSC (<vp></vp> is in range 0 255) or define the absolute time of the validity period termination (<vp></vp> is a string). OK
Maximum Response Time	300ms
Reference 3GPP TS 27.005	

<fo></fo>	First octet. Depending on the command or result code: First octet of 3GPP TS 23.040
	SMS-DELIVER, SMS-SUBMIT (default 17), SMS-STATUS-REPORT SMS-COMMAND
	in integer format. If a valid value has been entered once, parameter can be omitted
<vp></vp>	Validity period. Depending on SMS-SUBMIT <fo> setting: 3GPP TS 23.040</fo>
	TP-Validity-Period either in integer format or in time-string format (refer to <dt>)</dt>
<pid></pid>	Protocol identifier. 3GPP TS 23.040 TP-Protocol-Identifier in integer format (default 0).
<dcs></dcs>	Data coding scheme. Depending on the command or result code: 3GPP TS 23.038
	SMS Data Coding Scheme (default 0), or Cell Broadcast Data Coding Scheme in
	integer format

9.16. AT+QCMGS Send Concatenated Messages

AT+QCMGS is used to send concatenated massages. When sending a concatenated message, which is different from AT+CMGS, each segment of the concatenated message must be identified by the additional parameters: <uid>, <msg_seg> and <msg_total>. When sending all segments of the message one by one, AT+QCMGS must be executed multiple times (equal to <msg_total>) for each segment. This command is only used in text mode (AT+CMGF=1).

AT+QCMGS Send Concatenated	Messages
Test Command	Response
AT+QCMGS=?	OK
Write Command	Response
If text mode (+CMGF=1):	If text mode (+CMGF=1) and sent successfully:
AT+QCMGS= <da>[,<toda>][,<uid>,<m< td=""><td>+QCMGS: <mr></mr></td></m<></uid></toda></da>	+QCMGS: <mr></mr>
sg_seg>, <msg_total>]<cr></cr></msg_total>	
text is entered	OK
<ctrl-z esc=""></ctrl-z>	ERROR
	If error is related to ME functionality:
	+CMS ERROR: <err></err>

Maximum Response Time

Maximum Respons	se rime	1203, determined by network.
Parameter		
<uid></uid>	parameter is def	ation in the user data header (UDH). Range from 0 to 255. This fined and inputted by the user. All segments of a same assage must have the same <uid>. Different concatenated have different <uid>.</uid></uid>
<msg_seg></msg_seg>	•	of a concatenated message. Range from 0 to 7. eans: ignore the value and regarded it as a non-concatenated
<msg_total></msg_total>		of the segments of one concatenated message. Range from 0 or 1 means: ignore the value and regard it as a message.

120s determined by network

NOTES

<da>,<toda>,<mr>

- For concatenated messages, the maximum length will be reduced by the length of the user data header (UDH). 3GPP TS 23.040 defines two kinds of UDH length: 6 bytes and 7 bytes, so the two kinds of <uid> are 8 bit (6 bytes) and 16 bit (7 bytes). AT+QCMGS uses 8 bit <uid>.
 - In the case of GSM 7 bit default alphabet data coding scheme, the maximum length of each segment of a concatenated message is (140 octets 6)*8/7=153 characters.
 - In the case of 16 bit UCS2 data coding scheme, the maximum length of each segment is (140-6)/2=67 characters.
 - In the case of 8-bit data coding scheme, the maximum length of each segment is 140-6=134.
- 2. <mr>, Message-Reference field gives an integer representation of a reference number of the SMS-SUBMIT or SMS-COMMAND submitted to the SC by the MS, and it is used to confirm the SMS-DELIVER received from SC duplicate or not. <uid>, the field of UDH, is message identification of the concatenated SMS, which is different from <mr>. Each segment in a concatenated message should have the same <uid>, but <mr> must be incremented for each segment of a concatenated message.
- AT+QCMGS does not support to send message in PDU mode (AT+CMGF=0).

Please refer to AT+CMGS

Example

AT+CMGF=1	//Set SMS message format as text mode
OK	
AT+CSCS="GSM"	//Set character set as GSM which is used by the TE
ОК	
AT+QCMGS="15056913384",120,1,2 <cr></cr>	//Input 120 for <uid>, send the first segment of the</uid>
	concatenated SMS
>ABCD <ctrl-z></ctrl-z>	

+QCMGS: 190

OK

AT+QCMGS= "15056913384",120,2,2 <CR> //Send the second segment of the concatenated SMS.

>EFGH<Ctrl-Z> +QCMGS: 191

OK

9.17. AT+QCMGR Read Concatenated Messages

The function of AT+QCMGR is similar to AT+CMGR, except that the message to be read is a segment of concatenated messages, parameters: <uid>,<msg_seg></uid> and <msg_total></uid> would be shown in the result. You should concatenate several segments to a whole concatenated message according to these three parameters. Similar to AT+QCMGS, and AT+QCMGR is only used in text mode (AT+CMGF=1).

AT+QCMGR Read Concatenated	Messages
Test Command AT+QCMGR=?	Response OK
AT+QCMGR=? Write Command AT+QCMGR= <index></index>	Response If text mode (+CMGF=1) and command is executed successfully: For SMS-DELIVER: +QCMGR: <stat>,<oa>,[<alpha>],<scts>[,<tooa>,<fo>,<pid>,<dcs>,<sca>,<tosca>,<length>][,<uid>,<msg_seg>,<msg_total>] <cr><lf><data> OK For SMS-SUBMIT: +QCMGR:</data></lf></cr></msg_total></msg_seg></uid></length></tosca></sca></dcs></pid></fo></tooa></scts></alpha></oa></stat>
	<stat>,<da>,[<alpha>][,<toda>,<fo>,<pid>,<dcs>,[<vp>],<sca>,<tosca>,<length>][,<uid>,<msg_seg>,<msg_total>]<cr><lf><data> OK For SMS-STATUS-REPORTs: +QCMGR: <stat>,<fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st> OK For SMS-COMMANDs:</st></dt></scts></tora></ra></mr></fo></stat></data></lf></cr></msg_total></msg_seg></uid></length></tosca></sca></vp></dcs></pid></fo></toda></alpha></da></stat>

	+QCMGR: <stat>,<fo>,<ct>[,<pid>,[<mn>],[<da>],[<toda>],<length>< CR><lf><cdata>]</cdata></lf></length></toda></da></mn></pid></ct></fo></stat>
	ок
	Else, if error is related to ME functionality: +CMS ERROR: <err></err>
Maximum Response Time	Depends on the length of message content.

<uid></uid>	Message identification in the user data header (UDH). Range from 0 to 65535 (see
	NOTES). All segments of a same concatenated message have same <uid>.</uid>
	Different concatenated messages should have different <uid>.</uid>
<msg_seg></msg_seg>	Sequence number of a concatenated message. Range from 1 to 7.
<msg_total></msg_total>	The total number of the segments of one concatenated message. Range is from 2 to 7.
	Other parameters please refer to AT+CMGR

NOTES

- 1. The <uid> in AT+QCMGR is different from the <uid> in AT+QCMGS. It is possible that UE receives concatenated messages with 8 bits or 16 bits <uid>. So its maximal value is 255 with 8 bits and 65535 with 16 bits.
- 2. If the message to be read is not a concatenated message, <uid>, <msg_seg> and <msg_total> would not be showed in the result.

Example

+CMTI: "SM",3	//The first message of a concatenated message comes
+CMTI: "SM",4	//The second message of a concatenated message comes
AT+QCMGR= 3	//Read the first segment of the concatenated message
+QCMGR: "REC UNREAL	D","+8615056913384",,"13/07/30,14:44:37+32",120,1,2
ABCD	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,
OK	
AT+QCMGR= 4	//Read the second segment of the concatenated message
+QCMGR: "REC UNREAL	D","+8615056913384",,"13/07/30,14:44:37+32",120,2,2
EFGH	
OK	

10 Packet Domain Commands

10.1. AT+CGATT Attachment or Detachment of PS

The AT+CGATT write command is used to attach the MT to, or detach the MT from the packet domain service. After the command has completed, the MT remains in V.25ter command state. If the MT is already in the requested state, the command is ignored and the **OK** response will be returned. If the requested state cannot be achieved, an **ERROR** or **+CME ERROR** response is returned.

AT+CGATT Attachment or Detachment of PS		
Test Command	Response	
AT+CGATT=?	+CGATT: (list of supported <state>s)</state>	
	ОК	
Read Command	Response	
AT+CGATT?	+CGATT: <state></state>	
	OK	
Write Command	Response	
AT+CGATT= <state></state>	OK	
	If error is related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	75s, determined by network.	
Reference		
3GPP TS 27.007		

Parameter

<state></state>	Indicates the state of PS attachment		
	0	Detached	
	1	Attached	
	Othei	r values are reserved and will result in an ERROR response to the Write Command	

Example

AT+CGATT=1	//Attach to PS service
ОК	
AT+CGATT=0	//Detach from PS service
OK	
AT+CGATT?	//Query the current PS service state
+CGATT: 0	
OK	

NOTE

The configuration will be saved to NV automatically.

10.2. AT+CGDCONT Define PDP Context

AT+CGDCONT specifies PDP context parameters for a specific context **<cid>**. A special form of the write command (AT+CGDCONT=**<cid>**) causes the values for context **<cid>** to become undefined. It is not allowed to change the definition of an already activated context.

The AT+CGDCONT read command returns the current settings for each defined PDP context.

AT+CGDCONT Define PDP Cont	ext
Test Command AT+CGDCONT=?	Response +CGDCONT: (range of supported <cid>s), <pdp_type>, <apn>, <pdp_addr>, (list of supported <data_comp>s), (list of supported <head_comp>s) OK</head_comp></data_comp></pdp_addr></apn></pdp_type></cid>
Read Command AT+CGDCONT?	Response [+CGDCONT: <cid>,<pdp_type>,<apn>,<pdp_addr>,<data_comp>,<h ead_comp="">] [] OK</h></data_comp></pdp_addr></apn></pdp_type></cid>
Write Command AT+CGDCONT= <cid>[,<pdp_type>[,< APN>[,<pdp_addr>[,<data_comp>[,< head_comp>]]]]]</data_comp></pdp_addr></pdp_type></cid>	Response OK ERROR If error is related to ME functionality:

	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

<cid></cid>	PDP context identifier, a numeric parameter which specifies a particular PDP context
	definition. The parameter is local to the TE-MT interface and is used in other PDP
	context-related commands. The range of permitted values (minimum value=1) is

returned by the test form of the command

<PDP_type> Packet data protocol type, a string parameter which specifies the type of packet data

protocol

"IP" IPV4

"IPV6"
"IPV4V6"

<aPN> Access point name, a string parameter that is a logical name that is used to select the

GGSN or the external packet data network. If the value is null or omitted, then the

subscription value will be requested

<PDP_addr> A string parameter identifies the MT in the address space applicable to the PDP. If the

value is null of omitted, then a value may be provided by the TE during the PDP startup procedure or, failing that, a dynamic address will be requested. The allocated address

may be read using the +CGPADDR command

<data_comp> A numeric parameter that controls PDP data compression (applicable for SNDCP only)

(refer to 3GPP TS 44.065)

Off (default if value is omitted)

1 On (manufacturer preferred compression)

2 V.42bis

<head_comp> A numeric parameter that controls PDP header compression (refer to 3GPP TS 44.065

and 3GPP TS 25.323)

0 Off

1 On

2 RFC1144

3 RFC2507

4 RFC3095

NOTE

The configuration will be saved to NV automatically.

10.3. AT+CGQREQ Quality of Service Profile (Requested)

AT+CGQREQ allows the TE to specify a quality of service profile that is used when the MT activates a PDP context.

The write command specifies a profile for the context **<cid>>** which is a special form of the write command. AT+CGQREQ=**<cid>** causes the requested profile for context number **<cid>>** to become undefined. The read command returns the current settings for each defined context. Details can be found in 3GPP TS 23.107 and all of parameters are saved in NV automatically.

AT+CGQREQ Quality of Service	Profile (Requested)
Test Command AT+CGQREQ=?	Response +CGQREQ: <pdp_type>, (list of supported <pre>precedence>s), (list of supported <delay>s), (list of supported <reliability>s), (list of supported <pre>peak>s), (list of supported <mean>s)</mean></pre> OK</reliability></delay></pre></pdp_type>

10.4. AT+CGQMIN Quality of Service Profile (Minimum Acceptable)

AT+CGQMIN allows the TE to specify a minimum acceptable profile which is checked by the MT against the negotiated profile when the PDP context is activated. The write command specifies a profile for the context identified by the context identification parameter **<cid>**.

A special form of the write command, AT+CGQMIN=<cid> causes the minimum acceptable profile for context number <cid> to become undefined. In this case no check is made against the negotiated profile. The read command returns the current settings for each defined context. Details can be found in 3GPP

TS 23.107 and all of parameters are saved in NV automatically.

AT+CGQMIN Quality of Service F	Profile (Minimum Acceptable)
Test Command AT+CGQMIN=?	Response +CGQMIN: <pdp_type>, (list of supported <pre>precedence>s), (list of supported <delay>s), (list of supported <reliability>s), (list of supported <pre>peak>s), (list of supported <mean>s)</mean></pre> OK</reliability></delay></pre></pdp_type>

10.5. AT+CGEQREQ 3G Quality of Service Profile (Requested)

AT+CGEQREQ allows the TE to specify a UMTS Quality of Service Profile that is used when the MT activates a PDP context. Details can be found in 3GPP TS 23.107 and all of parameters are saved in NV automatically.

AT+CGEQREQ	3G Quality of Service Profile (Requested)
Test Command AT+CGEQREQ=?	Response +CGEQREQ: <pdp_type>, (list of supported <traffic class="">s), (list of supported <maximum bitrate="" ul="">s), (list of supported <maximum bitrate="" dl="">s), (list of supported <guaranteed bitrate="" ul="">s), (list of supported <guaranteed bitrate="" dl="">s), (list of supported <delivery order="">s), (list of supported <maximum sdu="" size="">s), (list of supported <sdu error="" ratio="">s), (list of supported <residual bit="" error="" ratio="">s), (list of supported <delivery erroneous="" of="" sdus="">s), (list of supported <transfer delay="">s), (list of supported <traffic handling="" priority="">s), (list of supported <source descriptor="" statistics=""/>s), (list of supported <signalling indication="">s)</signalling></traffic></transfer></delivery></residual></sdu></maximum></delivery></guaranteed></guaranteed></maximum></maximum></traffic></pdp_type>

3GPP TS 27.007	

<cid></cid>	PDP context identifier, a numeric parameter which specifies a particular
	PDP context definition. The parameter is local to the TE-MT interface and is
	used in other PDP context-related commands. The range of permitted
	values (minimum value=1) is returned by the test form of the command
<traffic class=""></traffic>	Integer type, indicates the type of application for which the UMTS bearer
	service is optimized (refer to 3GPP TS 24.008 subclause 10.5.6.5). If the
	Traffic class is specified as conversational or streaming, then the
	Guaranteed and Maximum bitrate parameters should also be provided
	0 Conversational
	1 Streaming
	2 Interactive
	3 Background
	4 Subscribed value
<maximum bitrate="" ul=""></maximum>	Integer type, indicates the maximum number of kbits/s delivered to UMTS

(up-link traffic) at a SAP. As an example a bit rate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=...,32, ...)

0 Subscribed value

1~8640

<Maximum bitrate DL>

Integer type, indicates the maximum number of kbits/s delivered by UMTS (down-link traffic) at a SAP. As an example a bitrate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=...,32, ...)

0 Subscribed value

1~16000

<Guaranteed bitrate UL>

Integer type, indicates the guaranteed number of kbits/s delivered to UMTS (up-link traffic) at a SAP (provided that there is data to deliver). As an example a bitrate of 32kbit/s would be specified as '32' (e.g. T+CGEQREQ=...,32, ...)

Subscribed value

1~8640

<Guaranteed bitrate DL> Integer type, indicates the guaranteed number of kbits/s delivered by UMTS (down-link traffic) at a SAP (provided that there is data to deliver). As an example a bitrate of 32kbit/s would be specified as '32' (e.g. AT+CGEQREQ=...,32, ...)

> Subscribed value 0

1~16000

<Delivery order>

Integer type, indicates whether the UMTS bearer shall provide in-sequence SDU delivery or not (refer to 3GPP TS 24.008 subclause 10.5.6.5)

No 0 1 Yes

Subscribed value

<Maximum SDU size>

Integer type, (1,2,3,...) indicates the maximum allowed SDU size in octets. If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 subclause 10.5.6.5)

Subscribed value 0

10~1500 (value needs to be divisible by 10 without remainder)

1502 1510 1520

<SDU error ratio>

String type, indicates the target value for the fraction of SDUs lost or detected as erroneous. SDU error ratio is defined only for conforming traffic. The value is specified as 'mEe'. As an example a target SDU error ratio of 5*10⁻³ would be specified as "5E3" (e.g. AT+CGEQREQ=...,"5E3",...)

Subscribed value "0E0"

"1E2"

"7E3"

"1E3"

"1E4"

"1E5"

	"1E6"
	"1E1"
<residual bit="" error="" ratio=""></residual>	"1E1" String type, indicates the target value for the undetected bit error ratio in the delivered SDUs. If no error detection is requested, Residual bit error ratio indicates the bit error ratio in the delivered SDUs. The value is specified as "mEe". As an example a target residual bit error ratio of 5•10-3 would be specified as "5E3" (e.g. AT+CGEQREQ=,"5E3",) "0E0" Subscribed value "5E2" "1E2" "5E3" "4E3" "1E3"
	"1E4"
	"1E5"
	"1E6"
	"6E8"

If the parameter is set to '0' the subscribed value will be requested (refer to 3GPP TS 24.008 [8] subclause 10.5.6.5) Subscribed 0 1 2 <Source Statistics Descriptor> Integer type, specifies characteristics of the source of the submitted SDUs for a PDP context 0 Characteristics of SDUs is unknown Characteristics of SDUs corresponds to a speech source <Signalling Indication> Integer type, indicates signaling content of submitted SDUs for a PDP

context.	
<u>0</u>	PDP context is not optimized for signaling
1	PDP context is optimized for signaling <pdp_type></pdp_type>

10.7. AT+CGACT Activate or Deactivate PDP Context

The AT+CGACT write command is used to activate or deactivate the specified PDP context(s). After the command has completed, the MT remains in V.250 command state. If any PDP context is already in the requested state, the state for that context remains unchanged. If the MT is not PS attached when the activation form of the command is executed, the MT first performs a PS attach and then attempts to activate the specified contexts. If no **<cid>** specifies the activation/deactivation form of the command, it will activate or deactivate all defined contexts.

AT+CGACT Activate or Deactivate PDP Context	
Test Command	Response
AT+CGACT=?	+CGACT: (list of supported <state>s)</state>
	ок
Read Command	Response
AT+CGACT?	[+CGACT: <cid>,<state>[<cr><lf></lf></cr></state></cid>

	NO CARRIER
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	150s, determined by network.
Reference	
3GPP TS 27.007	

<state></state>	Indicates the state of PDP context activation
	0 Deactivated
	1 Activated
	Other values are reserved and will result in an ERROR response to the Write Command
<cid></cid>	A numeric parameter which specifies a particular PDP context definition (see +CGDCONT

command)

Example

AT+CGDCONT=1,"IP","UNINET" //Define PDP context

OK

AT+CGACT=1,1 //Activated PDP

OK

AT+CGACT=0,1 //Deactivated PDP

OK

10.8. AT+CGDATA Enter Data State

The AT+CGDATA write command causes the MT to perform whatever actions are necessary to establish communication between the TE and the network using one or more packet domain PDP types. This may include per-forming a PS attach and one or more PDP context activations. Commands following the AT+CGDATA command in the AT command line will not be processed by the MT.

If the **<L2P>** parameter value is unacceptable to the MT, the MT shall return an ERROR or +CME ERROR response. Otherwise, the MT issues the intermediate result code CONNECT and enters V.250 online data state. After data transfer is complete, and the layer 2 protocol termination procedure has completed successfully, the command state is reentered and the MT returns the final result code OK.

AT+CGDATA Enter Data State	
Test Command	Response
AT+CGDATA=?	+CGDATA: (list of supported <l2p>s)</l2p>
	OK
Write Command	Response

Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<cid></cid>	A numeric parameter which specifies a particular PDP context definition (see	;

+CGDCONT command)

<PDP_addr>

A string that identifies the MT in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the **+CGDCONT** command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to **<cid>. <PDP** address> is omitted if none is available

Example

AT+CGDCONT=1,"IP","UNINET" //Define PDP context

OK

AT+CGACT=1,1 //Activated PDP

OK

AT+CGPADDR=1 //Show PDP address

+CGPADDR: 1,"10.76.51.180"

OK

10.10. AT+CGCLASS GPRS Mobile Station Class

AT+CGCLASS is used to set the MT to operate according to the specified mode of operation, see 3GPP TS 23.060.

AT+CGCLASS GPRS Mobile Stat	ion Class
Test Command	Response

3GPP TS 27.007	

<mode></mode>	<u>0</u>	Buffer unsolicited result codes in the MT; if MT result code buffer is full, the oldest ones can be discarded. No codes are forwarded to the TE.
	1	Discard unsolicited result codes when MT-TE link is reserved (e.g. in on-line data mode); otherwise forward them directly to the TE.
	2	Buffer unsolicited result codes in the MT when MT-TE link is reserved (e.g. in on-line data mode) and flush them to the TE when MT-TE link becomes available; otherwise forward them directly to the TE.
 bfr>	<u>0</u>	MT buffer of unsolicited result codes defined within this command is cleared when <mode> 1 or 2 is entered.</mode>
	1	MT buffer of unsolicited result codes defined within this command is flushed to the TE when <mode> 1 or 2 is entered (OK response shall be given before flushing the codes).</mode>

NOTES

The unsolicited result codes and the corresponding events are defined as follows:

- 1. **+CGEV: NW DEACT <PDP_type>,<PDP_addr>,[<cid>]**: The network has requested a context reactivation. The **<cid>** used to reactivate the context is provided if known to the MT.
- 2. **+CGEV: ME DEACT <PDP_type>,<PDP_addr>,[<cid>]**: The mobile equipment has forced a context deactivation. The **<cid>** used to activate the context is provided if known to the MT.
- 3. **+CGEV: NW DETACH**: The network has forced a Packet Domain detach. This implies that all active contexts have been deactivated. These are not reported separately.
- 4. **+CGEV: ME DETACH**: The mobile equipment has forced a Packet Domain detach. This implies that all active contexts have been deactivated. These are not reported separately.
- 5. **+CGEV: NW CLASS <class>**: The network has forced a change of MS class. The highest available class is reported (see AT+CGCLASS).
- 6. **+CGEV: ME CLASS <class>**: The mobile equipment has forced a change of MS class. The highest available class is reported (see AT+CGCLASS).

Example

AT+CGEREP=?

+CGEREP: (0-2),(0,1)

OK

AT+CGEREP? +CGEREP: 0,0

OK

10.13. AT+CGSMS Select Service for MO SMS Messages

AT+CGSMS specifies the service or service preference that the MT will use to send MO (mobile originated) SMS messages.

AT+CGSMS Select Service for M	O SMS Messages
Test Command	Response

	<u>1</u>	Circuit switch
	2	Packet domain preferred (use circuit switched if packet domain service not
		available)

3 Circuit switch preferred (use packet domain if circuit switched not available)

10.14. AT+QGDCNT GPRS Data Counter

This command allows the application to check how much data in bytes are sent or received.

AT+QGDCNT GPRS Data Counter	
Test Command	Response
AT+QGDCNT=?	+QGDCNT: (0,1)
	OK
Read Command	Response
AT+QGDCNT?	+QGDCNT: <bytes_sent>,<bytes_recv></bytes_recv></bytes_sent>
	OK
Write Command	Response
AT+QGDCNT= <op></op>	OK
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Reference	

Parameter

<op></op>	A numeric parameter. The operation about data counter
	0 Reset the data counter
	1 Save the results of data counter to NV. If you want to auto save results, please
	refer to command AT+QAUGDCNT
 dytes_sent>	A numeric parameter. The amount of sent data in bytes
<bytes_recv></bytes_recv>	A numeric parameter. The amount of received data in bytes

NOTE

When module is powered on, <bytes_sent> and <bytes_recv> will be loaded from results of data counter in NV. The default result in NV is 0.

Example

AT+QGDCNT=? //Test command

+QGDCNT: (0,1)

OK

AT+QGDCNT? //Query the current <bytes_sent> and <bytes_recv>

+QGDCNT: 3832,4618

OK

AT+QGDCNT=1 //Save the results to NV

OK

AT+QGDCNT=0 //Reset counter

OK

10.15. AT+QAUGDCNT Configure to Auto Save GPRS Data Counter

This command allows command (AT+QGDCNT) saves results to NV automatically.

AT+QAUGDCNT Configure to Au	to Save GPRS Data Counter
Test Command	Response
AT+QAUGDCNT=?	+QAUGDCNT: (0,30-65535)
	OK
Read Command	Response
AT+QAUGDCNT?	+QAUGDCNT: <value></value>
	ОК
Write Command	Response
AT+QAUGDCNT= <value></value>	ОК
	ERROR
OK	
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Reference	

<value></value>	A numeric parameter. Default value is 0. <value> is the time-interval for command</value>
	(AT+QGDCNT) to save results to NV automatically. If <value> is set to 0, auto-save</value>
	feature would be disabled. Unit is second.

NOTE

The configuration would not be saved into NV.

10.16. AT+QAUGTH Set Auth Type

This command only sets auth type in first LCP REQ frame from module. The final auth type is negotiated by MCU and module.

AT+QGAUTH Set Auth Type	
Test Command	Response
AT+QGAUTH=?	+QGAUTH: (1-20),auth_type
	ОК
Read Command	Response
AT+QGAUTH= <contextid></contextid>	+QGAUTH: <auth_type></auth_type>
	OK
Set Command	Response
AT+QGAUTH= <contextid>,<auth_type></auth_type></contextid>	ОК
	ERROR

Parameter

<contextid> Context profile ID

1-20

<auth_type> Auth type

<u>1</u> PAP

2 CHAP

Example

AT+QGAUTH=?

+QGAUTH: (1-20),(1,2)

OK

AT+QGAUTH=1

+QGAUTH: 1

OK

AT+QGAUTH=1,2

OK

AT+QGAUTH=1

+QGAUTH: 2

OK

11 Supplementary Service Commands

11.1. AT+CCFC Call Forwarding Number and Conditions Control

AT+CCFC allows control of the call forwarding supplementary service according to 3GPP TS 22.082. Registration, erasure, activation, deactivation and status query are supported.

AT+CCFC Call Forwarding Number	per and Conditions Control
Test Command AT+CCFC=?	Response +CCFC: (list of supported <reads>s) OK</reads>
Write Command AT+CCFC= <reads>,<mode>[,<numbe r="">[,<type>[,<class>[,<subaddr>[,<sat ype="">[,time]]]]]]</sat></subaddr></class></type></numbe></mode></reads>	Response TA controls the call forwarding supplementary service. Registration, erasure, activation, deactivation, and status query are supported. Only <pre>creads></pre> and <pre>cmode></pre> should be entered with mode (0-2,4) If <pre>cmode><->2</pre> and command successful OK If <pre>cmode>=2</pre> and command successful (only in connection with <pre>creads></pre> 0-3) For registered call forwarding numbers: +CCFC: <pre>cstatus></pre> , <pre>class1>[</pre> , <pre>cnumber></pre> , <pre>ctype>[</pre> [, <subaddr><,<satype>[,<time>]]] [<cr><lf><cr><lf>+CCFC:] OK If no call forwarding numbers are registered (and therefore all classes are inactive): +CCFC: <status>, <class> OK</class></status></lf></cr></lf></cr></time></satype></subaddr>
	where <status>=0 and <class>=15</class></status>

	If error is related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

<reads></reads>	0	Unconditional
	1	Mobile busy
	2	No reply
	3	Not reachable
	4	All call forwarding (0-3)
	5	All conditional call forwarding (1-3)
<mode></mode>	0	Disable
	1	Enable
	2	Query status
	3	Registration
	4	Erasure
<number></number>	Phone	number in string type of forwarding address in format specified by <type></type>
<type></type>	Type of address in integer format; default value is 145 when dialing string	
	internat	tional access code character "+", otherwise 129
<subaddr></subaddr>	String t	ype sub-address of format specified by <satype></satype>
<satype></satype>	Type of sub-address in integer	
<class></class>	1	Voice
	2	Data
	4	FAX
	7	All telephony except SMS
	8	Short message service
	16	Data circuit sync
	32	Data circuit async
<time></time>	130	When "no reply" (<reads>=no reply) is enabled or queried, this gives the time in</reads>
		seconds to wait before call is forwarded, default value is 20
<status></status>	0	Not active
	1	Active

Example

AT+CCFC=0,3,"15021012496"	//Register the destination number for unconditional call forwarding (CFU)
ОК	
AT+CCFC=0,2	//Query the status of CFU without specifying <class></class>
+CCFC: 1,1,"+8615021012496",145,,,	

OK

AT+CCFC=0,4 //Erase the registered CFU destination number

OK

AT+CCFC=0,2 //Query the status, no destination number

+CCFC: 0,255

OK

11.2. AT+CCWA Call Waiting Control

The AT+CCWA command allows control of the call waiting supplementary service according to 3GPP TS 22.083. Activation, deactivation and status query are supported.

AT+CCWA Call Waiting Control	XVI
Test Command	Response
AT+CCWA=?	+CCWA: (list of supported <n>s)</n>
	ОК
Read Command	Response
AT+CCWA?	+CCWA: <n></n>
	OK.
Write Command	OK Response
AT+CCWA=[<n>[,<mode>[,<class>]]]</class></mode></n>	TA controls the call waiting supplementary service. Activation,
A11001/A-[\(\tau\)],\(\tau\)	deactivation and status query are supported.
	If <mode></mode> <>2 and command successful:
	ОК
	If <mode>=2 and command successful:</mode>
	+CCWA: <status>,<class1>[<cr><lf>+CCWA:</lf></cr></class1></status>
	<status>,<class2>[]]</class2></status>
	ок
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<n></n>	0	Disable presentation of an unsolicited result code	
	1	Enable presentation of an unsolicited result code	
<mode></mode>	Whe	en <mode> parameter is not given, network is not interrogated</mode>	
	0	Disable	
	1	Enable	
	2	Query status	
<class></class>	Asu	m of integers, each integer represents a class of information	
	1	Voice (telephony)	
	2	Data (bearer service)	
	4	FAX (facsimile)	
	16	Data circuit sync	
	32	Data circuit async	
<status></status>	0	Disable	
	1	Enable	
<number></number>	Phor	Phone number in string type of calling address in format specified by <type></type>	
<type></type>			
	129	Unknown type (IDSN format number)	
	145	International number type (ISDN format)	
<alpha></alpha>	Optio	onal string type alphanumeric representation of <number> corresponding to the</number>	
	entry	y found in phone book	
<cli_validity< th=""><th>> Integ</th><th>ger type</th></cli_validity<>	> Integ	ger type	
	0	CLI valid	
	1	CLI has been withheld by the originator	
	2	CLI is not available due to interworking problems or limitations of originating network	

NOTES

- 1. **<status>**=0 should be returned only if service is not active for any **<class>** i.e. +CCWA: 0, 7 will be returned in this case.
- 2. When <mode>=2, all active call waiting classes will be reported. In this mode the command is aborted by pressing any key.
- 3. Unsolicited result code:

When the presentation call waiting at the TA is enabled (and call waiting is enabled) and a terminating call set up during an established call, an unsolicited result code is returned:

+CCWA: <number>,<type>,<class>,[<alpha>],<CLI_validity>

Example

AT+CCWA=1,1 //Enable presentation of an unsolicited result code

OK

ATD10086; //Establish a call

OK

+CCWA: "02154450293",129,1,,0 //Indication of a call that has been waiting

11.3. AT+CHLD Call Related Supplementary Services

The AT+CHLD command allows the control of the following call related services:

- A call can be temporarily disconnected from the MT but the connection is retained by the network;
- Multiparty conversation (conference calls);
- The served subscriber who has two calls (one held and the other either active or alerting) can connect the other parties and release the served subscriber's own connection.

Calls can be put on hold, recovered, released and added to a conversation, and transferred similarly as defined in 3GPP TS 22.030.

This is based on the GSM/UMTS supplementary services HOLD (Call Hold; refer to 3GPP TS 22.083 clause 2), MPTY (Multi Party; refer to 3GPP TS 22.084) and ECT (Explicit Call Transfer; refer to 3GPP TS 22.091). The interaction of this command with other commands based on other GSM/UMTS supplementary services is described in the GSM/UMTS standards. Call Hold, Multi Party and Explicit Call Transfer are only applicable to teleservice 11.

AT+CHLD Call Related Supple	ementary Services
Test Command	Response
AT+CHLD=?	+CHLD: (list of supported <n>s)</n>
	ОК
Write Command	Response
AT+CHLD[= <n>]</n>	TA controls the supplementary services call hold, multiparty
	and explicit call transfer. Calls can be put on hold, recovered,
	released, added to conversation and transferred.
	OK
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

<n></n>	0	Terminate all held calls or UDUB (User Determined User Busy) for a waiting call. If
		a call is waiting, terminate the waiting call. Otherwise, terminate all held calls (if
		any)
	1	Terminate all active calls (if any) and accept the other call (waiting call or held
		call). It can terminate active call if there is only one call
	1X	Terminate the specific call number X
	2	Place all active calls on hold (if any) and accept the other call (waiting call or held
		call) as the active call
	2X	Place all active calls except call X on hold
	3	Add the held call to the active calls
	4	Connects the two calls and disconnects the subscriber from both calls (ECT)

Example

ATD10086; OK	//Establish a call
+CCWA: "02154450293",129,1 AT+CHLD=2	//Indication of a call that has been waiting //Place the active call on hold and accept the waiting call as the active call
OK AT+CLCC	
+CLCC: 1,0,1,0,0,"10086",129	//The first call on hold
+CLCC: 2,1,0,0,0,"02154450293",129	//The second call be active
OK AT+CHLD=21 OK	//Place the active call except call X=1 on hold
AT+CLCC +CLCC: 1,0,0,0,0,"10086",129	//The first call be active
+CLCC: 2,1,1,0,1,"02154450293",129	//The second call on hold
OK AT+CHLD=3	//Add a held call to the active calls in order to set up a conference (multiparty) call
OK AT+CLCC	
+CLCC: 1,0,0,0,1,"10086",129	
+CLCC: 2,1,0,0,1,"02154450293",129	

OK

11.4. AT+CLIP Calling Line Identification Presentation

AT+CLIP refers to the GSM/UMTS supplementary service CLIP (Calling Line Identification Presentation) that enables a called subscriber to get the calling line identity (CLI) of the calling party when receiving a mobile terminated call.

AT+CLIP Calling Line Identificat	ion Presentation
Test Command	Response
AT+CLIP=?	+CLIP: (list of supported <n>s)</n>
	ок
Read Command	Response
AT+CLIP?	+CLIP: <n>,<m></m></n>
	ОК
Write Command	Response
AT+CLIP= <n></n>	TA enables or disables the presentation of the calling line
	identity (CLI) at the TE. It has no effect on the execution of the
	supplementary service CLIP in the network.
	ОК
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	15s, determined by network.
Reference	
3GPP TS 27.007	

<u>0</u>	Suppress unsolicited result codes
1	
1	Display unsolicited result codes
0	CLIP not provisioned
1	CLIP provisioned
2	Unknown
Phone number in string type of calling address in format specified by <type></type>	
String type subaddress of format specified by <satype></satype>	
Type of subaddress octet in integer format (refer to 3GPP TS 24.008 [8] subclause	
(1 2 Phone r String ty

Type of address octet in integer format;
129 Unknown type (IDSN format number)
145 International number type (ISDN format)
String type alphanumeric representation of <number> corresponding to the entry found in phone book

<CLI validity> 0 CLI valid

1 CLI has been withheld by the originator

2 CLI is not available due to interworking problems or limitations of originating

network

NOTE

Unsolicited result code:

When the presentation of the CLIP at the TE is enabled (and calling subscriber allows), an unsolicited result code is returned after every RING (or +CRING: <type>) at a mobile terminating call:

+CLIP: <number>,<type>,[subaddr],[satype],[<alpha>],<CLI validity>

Example

AT+CLIP=1

OK

RING

+CLIP: "02151082965",129,,,,0

11.5. AT+CLIR Calling Line Identification Restriction

AT+CLIR refers to the CLIR supplementary service (Calling Line Identification Restriction) according to 3GPP TS 22.081 and the OIR supplementary service (Originating Identification Restriction) according to 3GPP TS 24.607) that allows a calling subscriber to enable or disable the presentation of the calling line identity (CLI) to the called party when originating a call.

AT+CLIR Calling Line Identificati	on Restriction
Test Command	Response
AT+CLIR=?	+CLIR: (list of supported <n>s)</n>
	OK
Read Command	Response
AT+CLIR?	+CLIR: <n>,<m></m></n>

	ок
Write Command	Response
AT+CLIR= <n></n>	TA restricts or enables the presentation of the calling line identity (CLI) to the called party when originating a call. The command overrides the CLIR subscription (default is restricted or allowed) when temporary mode is provisioned as a default adjustment for all following outgoing calls. This adjustment can be revoked by using the opposite Command. OK
	If error is related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time	15s, determined by network.
Reference 3GPP TS 27.007	

<n></n>	Parameter sets the adjustment for outgoing calls
	O Presentation indicator is used according to the subscription of the CLIR service
	1 CLIR invocation
	2 CLIR suppression
<m></m>	Parameter shows the subscriber CLIR service status in the network
	0 CLIR not provisioned
	1 CLIR provisioned in permanent mode
	2 Unknown (e.g. no network, etc.)
	3 CLIR temporary mode presentation restricted
	4 CLIR temporary mode presentation allowed

11.6. AT+COLP Connected Line Identification Presentation

AT+COLP refers to the GSM/UMTS supplementary service COLP (Connected Line Identification Presentation) that enables a calling subscriber to get the connected line identity (COL) of the called party after setting up a mobile originated call. The command enables or disables the presentation of the COL at the TE. It has no effect on the execution of the supplementary service COLR in the network.

AT+COLP Connected Line Identification Presentation	
Test Command	Response
AT+COLP=?	+COLP: (list of supported <n>s)</n>

	ок
Read Command	Response
AT+COLP?	+COLP: <n>,<m></m></n>
	ОК
Write Command	Response
AT+COLP= <n></n>	TA enables or disables the presentation of the COL
	(Connected Line) at the TE for a mobile originating a call. It
	has no effect on the execution of the supplementary service
	COLR in the network.
	Intermediate result code is returned from TA to TE before any
	+CR or V.25ter responses.
	ок
Maximum Response Time	15s, determined by network.
Reference	
3GPP TS 27.007	

<n></n>	Parameter sets/shows the result code presentation status in the TA	
	<u>0</u> Disable	
	1 Enable	
<m></m>	Parameter shows the subscriber COLP service status in the network	
	0 COLP not provisioned	
	1 COLP provisioned	
	2 Unknown (e.g. no network, etc.)	
<number></number>	Phone number in string type, format specified by <type></type>	
<type></type>	Type of address octet in integer format	
	129 Unknown type (IDSN format number)	
	145 International number type (ISDN format)	
<subaddr></subaddr>	String type sub-address of format specified by <satype></satype>	
<satype></satype>	Type of sub-address octet in integer format (refer to 3GPP TS 24.008 sub clause	
	10.5.4.8)	
<alpha></alpha>	Optional string type alphanumeric representation of <number> corresponding to the</number>	
	entry found in phone book	

NOTE

Intermediate result code:

When enabled (and called subscriber allows), an intermediate result code is returned before any +CR or V.25ter responses:

+COLP: <number>,<type>,[<subaddr>],[<satype>] ,[<alpha>]

Example

AT+COLP=1

OK

ATD02151082965;

OK

+COLP: "02151082965",129,,,

11.7. AT+CSSN Supplementary Service Notifications

AT+CSSN refers to supplementary service related network initiated notifications. The write command enables/disables the presentation of notification result codes from TA to TE.

AT+CSSN Supplementary Service Notifications	
Test Command AT+CSSN=?	Response +CSSN: (list of supported <n>s),(list of supported <m>s)</m></n>
	ОК
Read Command	Response
AT+CSSN?	+CSSN: <n>,<m></m></n>
W. '. O	OK D
Write Command	Response
AT+CSSN= <n>[,<m>]</m></n>	OK
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

4N5	Intog	or type parameter cots/shows the LCSSI intermediate result code presentation
<n></n>	Integer type, parameter sets/shows the +CSSI intermediate result code presentation status to the TE	
	<u>O</u>	Disable
	1	Enable
<m></m>	Integ	er type (parameter sets/shows the +CSSU unsolicited result code presentation
	status to the TE)	
	0	Disable
	1	Enable
<code1></code1>	Integer type, it is manufacturer specific, which of these codes are supported	
	0	Unconditional call forwarding is active
	1	Some of the conditional call forwardings are active
	2	Call has been forwarded
	3	Waiting call is pending
	5	Outgoing call is barred
<code2></code2>	Integer type, it is manufacturer specific, which of these codes are supported	
	0	The incoming call is a forwarded call
	2	Call has been put on hold (during a voice call)
	3	Call has been retrieved (during a voice call)
	5	Held call was terminated by other party
	10	Additional incoming call forwarded

NOTES

- When <n>=1 and a supplementary service notification is received after a mobile originated call setup, the +CSSI intermediate result code is sent to TE before any other MO call setup result codes:
 - +CSSI: <code1>
- 2. When <m>=1 and a supplementary service notification is received during a mobile terminated call setup or during a call, the +CSSU unsolicited result code is sent to TE:
 - +CSSU: <code2>

11.8. AT+CUSD Unstructured Supplementary Service Data

AT+CUSD allows control of the Unstructured Supplementary Service Data (USSD) according to 3GPP TS 22.090. Both network and mobile initiated operations are supported.

Parameter **<mode>** is used to disable/enable the presentation of an unsolicited result code. The value **<mode>**=2 is used to cancel an ongoing USSD session. For an USSD response from the network, or a network initiated operation, the format is: **+CUSD**: **<status>[,<rspstr>,[<dcs>]]**.

When **<reqstr>** is given, a mobile initiated USSD string or a response USSD string to a network initiated operation is sent to the network. The response USSD string from the network is returned in a subsequent **+CUSD** URC.

AT+CUSD Unstructured Supplementary Service Data	
Test Command AT+CUSD=?	Response +CUSD: (list of supported <mode>s)</mode>

<mode></mode>	Integer type, sets/shows the result code presentation status to the TE	
	O Disable the result code presentation to the TE	
	1 Enable the result code presentation to the TE	
	2 Cancel session (not applicable to read command response)	
<reqstr></reqstr>	Unstructured Supplementary Service Data (USSD) to be sent to the network. If this parameter is not given, network is not interrogated.	
<rspstr></rspstr>	Unstructured Supplementary Service Data (USSD) received from the network.	
<dcs></dcs>	Integer type, 3GPP TS 23.038 Cell Broadcast Data Coding Scheme (default 15)	
<status></status>	USSD response from the network or the network initiated operation	
	0 No further user action required (network initiated USSD Notify, or no further	
	information needed after mobile initiated operation)	
	1 Further user action required (network initiated USSD Request, or further	
	information needed after mobile initiated operation)	
	2 USSD terminated by network	
	3 Other local client has responded	
	4 Operation not supported	
	5 Network time out	

12 Audio Commands

12.1. AT+CLVL Loud Speaker Volume Level

AT+CLVL is used to select the volume of the internal loudspeaker of the MT.

AT+CLVL Loud Speaker Volume Level	
Test Command	Response
AT+CLVL=?	+CLVL: (list of supported <level>s)</level>
	ок
Read Command	Response
AT+CLVL?	+CLVL: <level></level>
	ок
Write Command	Response
AT+CLVL= <level></level>	ОК
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms
Reference	
3GPP TS 27.007	

Parameter

Integer type, value (0-100) with manufacturer specific range (Smallest value represents the lowest sound level), the default value of mode 0 is 80, the default value of mode 1 is 70, the default value of mode 2 is 50.

NOTE

This parameter will not be saved.

12.2. AT+CMUT Mute Control

AT+CMUT is used to enable and disable the uplink voice muting during a voice call.

AT+CMUT Mute Control	
Test Command	Response
AT+CMUT=?	+CMUT: (list of supported< n> s)
	ок
Read Command	Response
AT+CMUT?	+CMUT: <n></n>

Write Command AT+CRSL= <level></level>	Response OK ERROR

Maximum Response Time	300ms
-----------------------	-------

<level> Numeric type, indicates the configured volume of ring tone.

Range: 0-100, the default value of mode 0 is 80, the default value of mode 1 is 50, the default value of mode 2 is 80.

NOTE

This parameter will not be saved.

12.5. AT+QAUDLOOP Enable Audio Loop Test

This command is used to enable audio loop test.

AT+QAUDLOOP Enable Audio Lo	pop Test
Test Command AT+QAUDLOOP=?	Response +QAUDLOOP: (0,1),(0-2) OK
Read Command AT+QAUDLOOP?	Response +QAUDLOOP: <enable>,<path> OK</path></enable>
Set Command AT+QAUDLOOP= <enable>[,<path>]</path></enable>	Response OK ERROR
Maximum Response Time	300ms

Parameter

<enable></enable>	Numeric type; to enable or disable audio loop test	
	O Disable audio loop test	
	1 Enable audio loop test	
<path></path>	Compatible argument, no effect	

NOTE

These parameters will not be saved.

12.6. AT+VTS DTMF and Tone Generation

The AT+VTS command is used to send ASCII characters which causes MSC to transmit DTMF tones to a remote subscriber. This command can only be operated in voice call.

AT+VTS DTMF and Tone Generation	
Test Command	Response
AT+VTS=?	+VTS: (0-9,A-D,*,#),(0-255)
Write Command	OK
	Response
AT+VTS= <dtmfstring>[,<duration>]</duration></dtmfstring>	OK
	ERROR
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	Depends on the length of <dtmfstring> and <duration>.</duration></dtmfstring>
Reference	
3GPP TS 27.007	

Parameter

<dtmfstring></dtmfstring>	ASCII characters in the set 09,#,*, A, B, C, D. The string should enclose in quotation marks ("")
	When sending multiple tones at a time, the time interval of two tones
	<interval> specified by +VTD. The maximal length of the string is 31</interval>
<duration></duration>	The duration of each tone in 1/10 seconds with tolerance
	Value ranges from 0 to 255 and default is 0
	If the duration is less than the minimum value depend on the network, the
	actual duration is depend on the network
	If this parameter is omitted, <duration> is specified by +VTD</duration>

Example

ATD12345678900;	//Dial
OK	

<Call connect>

AT+VTS="1" //The remote can listen to DTMF tone

OK

AT+VTS="1234567890A" //Send multiple tones at a time

OK

12.7. AT+VTD Set Tone Duration

AT+VTD sets the duration of DTMF tones. This command can also set time interval of two tones when sending multiple tones at a time.

AT+VTD Set Tone Duration	
Test Command AT+VTD=?	Response +VTD: (0-255),(0-255) OK
Read Command AT+VTD?	Response +VTD: <duration>,<interval> OK</interval></duration>
Write Command AT+VTD= <duration>[,<interval>]</interval></duration>	Response OK ERROR If error is related to ME functionality: +CME ERROR: <err></err>
Maximum Response Time Reference 3GPP TS 27.007	300ms

Parameter

<duration></duration>	The duration tone in 1/10 seconds with tolerance. Value ranges from 0 to 255
	and default is 1. If the duration is less than the minimum time specified by the
	network, the actual duration will be network specified time.
<interval></interval>	The time interval of two tones when sending multiple tones at a time by +VTS .
	Value ranges from 0 to 255 and default is 0.

NOTE

This parameter will not be saved.

12.8. AT+QDAC Digital Audio Configure

AT+QDAC is used to configure the digital audio interface. While **<io>=**1, you can define the PCM interface by themselves; while **<io>=**2, and the external codec chip linked with PCM interface is the NAU8814model through the I2C, the module can be used directly and set by the default configurations. while **<io>=**3, and the external codec chip linked with PCM interface is the ALC5616 model through the I2C,the module can be used directly and set by the default configurations. while **<io>=**4, and the external codec chip linked with PCM interface is the MAX9860 model through the I2C,the module can be used directly and set by the default configurations.

AT+QDAC Digital Audio Configure		
Test Command AT+QDAC=?	Response +QDAC: (1-4),(0,1),(0-8),(0,2),(0,1),(0,1) OK	
Read Command AT+QDAC?	Response +QDAC: <io>[,<mode>,<sample_rate>,<data_length>,<channel_mo de="">,<data_format>] OK</data_format></channel_mo></data_length></sample_rate></mode></io>	
Write Command AT+QDAC= <io>[,<mode>,<sample_ra te="">,<data_length>,<channel_mode>,< data_format>]</channel_mode></data_length></sample_ra></mode></io>	Response OK ERROR	
Maximum Response Time	300ms	

Parameter

<io></io>	<u>1</u>	Digital PCM output (Customer defined)
	2	Analog output (For our default audio codec NAU8814)
	3	Analog output (For our default audio codec ALC5616)
	4	Analog output (for our default audio codec max9860)
<mode></mode>	<u>0</u>	Master mode
	1	Slave mode

<sample_rate></sample_rate>	0	8K	
-	1	11K	
	2	12K	
	3	16k	
	4	22K	
	5	24K	
	6	32K	
	7	44K	
	8	48K	
<data_length></data_length>	0	16-bit	
	<u>2</u>	32-bit	
<channel_mode< td=""><td>> <u>0</u></td><td>Mono</td><td></td></channel_mode<>	> <u>0</u>	Mono	
	1	Stereo	
<data_format></data_format>	<u>0</u>	PCM	
	1	I2S	

NOTES

- 1. Configuration of **<io>** will be saved to NV automatically.
- 2. The module provides clock, and the clock depends on <sample_rate> and <data_length>.
- 3. When you select ALC5616, NAU8814 or MAX9860, please do not input other parameters, the PCM interface is set by the default configurations.

12.9. AT+QLTONE Play a Local Customized Tone

AT+QLTONE is used to play a customized tone, use **<period_on>** to indicate play time, **<period_off>** to indicate mute time, and **<duration>** to indicate total time.

AT+QLTONE Play a Local Customized Tone		
Test Command AT+QLTONE=?	Response +QLTONE: (0,1),(100-3900),(0-1000),(0-1000),(0-15300000)	
	ок	
Write Command	Response	
AT+QLTONE= <mode>[,<frequency>,</frequency></mode>	ОК	
<pre><period_on>,<period_off>,<duration>]</duration></period_off></period_on></pre>	+CME ERROR: <err></err>	
	After playing completed, report:	
	+QLTONE: 0	
Maximum Response Time	300ms	

<mode></mode>	0 Stop play	
	1 Start play	
<frequency></frequency>	Tone's frequency, unit: Hz, range: 100-3900	
<period_on></period_on>	Tone's on time, unit: ms, range: 0-1000	
<period_off></period_off>	Tone's mute time, unit: ms, range: 0-1000	
<duration></duration>	Tone's total time, unit: ms, range: 0-15300000	

NOTE

This parameter will not be saved.

Example

AT+QLTONE=? //Query the range.
+QLTONE: (0,1),(100-3900),(0-1000),(0-15300000)

OK
AT+QLTONE=1,1000,200,300,3000 //Play a 1000Hz tone, on time is 200ms, mute time is 300ms, total time is 3000ms.

OK
+QLTONE:0
AT+QLTONE=0 //Stop playing.
OK

12.10. AT+QLDTMF Play Local DTMF

AT+QLDTMF is used to play a DTMF string, maximum length is 20 characters. You can use AT+QLDTMF to stop it.

AT+QLDTMF Play Local DTMF	
Test Command	Response
AT+QLDTMF=?	+QLDTMF: (1-1000),(0-9,A-G,*,#)
	OK
Write Command	Response
AT+QLDTMF= <n>,<dtmf_string>[,<y< th=""><td>OK</td></y<></dtmf_string></n>	OK

	After playing completed, report: +QLDTMF: 5
Execute Command AT+QLDTMF	Response OK
Maximum Response Time	300ms

<n></n>	Numeric type, indicates every DTMF's on time and mute time. Ranges: 1-1000,
	the unit is 1/100 second when <y></y> is set to 1; or 1/10 second when <y></y> is not set.
<dtmf_string></dtmf_string>	String type, max 20 DTMFs, separated by comma. DTMFs: 0-9, A-G, #, *

NOTE

This parameter will not be saved.

Example

AT+QLDTMF=? //Query the range.

+QLDTMF: (1-1000),(0-9,A-G,*,#)

OK

AT+QLDTMF=2,"1,2,#" //Play 1, 2, # on time & mute time is 200ms.

OK

+QLDTMF: 5

AT+QLDTMF //Stop playing.

OK

12.11. AT+QWDTMF Play/Send DTMF Tone(s)

This command is used to play or send DTMF tone(s).

AT+QWDTMF Play/Send DTMF Tone(s)

AT+QWDTMF=?	+QWDTMF:
Test Command	Response

(0,1),(0,1),("<DTMF_code>,<continuance_time>,<mute_tim

e>[,...]")

	ОК
Set Command	Response
AT+QWDTMF= <ul_mute>,<dl_mute>,</dl_mute></ul_mute>	ОК
("DTMF_code>, <continuance_time>,<</continuance_time>	+CME ERROR: <err></err>
mute_time>[,]")	
	After playing completed, report:
	+QWDTMF: 5
Maximum Response Time	300ms

<ul_mute> Numeric type, mute uplink or not Mute 0 Not mute <dl_mute> Numeric type, mute downlink or not Mute Not mute 1 <DTMF_code> String type, max 20 DTMFs DTMF 0 DTMF 1 1 2 DTMF 2 3 DTMF 3 4 DTMF 4 DTMF 5 5 6 DTMF 6 7 DTMF 7 DTMF 8 9 DTMF 9 A DTMF A DTMF B В С DTMF C D DTMF D Е DTMF E F DTMF F G DTMF G DTMF * # DTMF# **<continuance_time>** Numeric type, indicates duration of each DTMF tone. Unit: ms, range: 0-10000. <mute_time> Numeric type, indicates mute time. Unit: ms, range: 0-10000.

NOTE

This parameter will not be saved.

Example

```
AT+QWDTMF: (0,1),(0,1),("<DTMF_code>,<continuance_time>,<mute_time>[,...]")

OK
AT+QWDTMF=1,1,"1,1000,10,2,1000,2" //Play 1, 2 both uplink and downlink
OK

+QWDTMF: 5
AT+QWDTMF=0,1,"1,1000,10" //Only Play 1 on downlink
OK

+QWDTMF: 5
```

12.12. AT+QMIC Set Uplink(MIC) Volume

This command is used to set MIC gains to change uplink volume.

AT+QMIC Set Uplink(MIC) Volume		
Test Command AT+QMIC=?	Response +QMIC: (0-2),(0-15) OK	
Read Command AT+QMIC?	Response +QMIC: <handset volume="">,<handfree volume=""> OK</handfree></handset>	
Set Command AT+QMIC= <mode>,<volume></volume></mode>	Response OK ERROR	
Maximum Response Time	300ms	

<mode> Numeric type, audio mode

0 Handset

1 Headset

2 Handfree

<volume> Numeric type, indicates uplink volume. Range: 0-15, the default value of mode 0 is 12, the

default value of headset mode is 14, the default value of handfree mode is 13.

NOTE

These parameters will not be saved.

12.13. AT+QAUDMOD Set Audio Mode

AT+QAUDMOD sets the audio mode required for the connected device.

AT+QAUDMOD Set Audio Mode	
Test Command	Response
AT+QAUDMOD=?	+QAUDMOD: (0-2)
	ок
Read command	Response
AT+QAUDMOD?	+QAUDMOD: <mode></mode>
	ОК
Write Command	Response
AT+QAUDMOD= <mode></mode>	OK
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Maximum Response Time	300ms

Parameter

<mode></mode>	Numeric type, indicates the current configured audio mode		
	0	Echo canceller, noise suppressor, digital gain and calibration parameter for Handset	
	1	Echo canceller, noise suppressor, digital gain and calibration parameter for Headset	
	2	Echo canceller, noise suppressor, digital gain and calibration parameter for Speaker	

NOTE

These parameters will not be saved.

12.14. AT+QAUDCFG Audio Tuning Process

AT+QAUDCFG is used to query and configure various audio settings of UE.

AT+QAUDCFG Audio Tuning Process	
Test Command	Response
AT+QAUDCFG=?	+QAUDCFG: "handset/eec",
	(list of supported <eecpara>s)</eecpara>
	+QAUDCFG: "headset/eec",
	(list of supported <eecpara></eecpara> s)
	+QAUDCFG: "handfree/eec",
	(list of supported <eecpara>s)</eecpara>
	+QAUDCFG: "handset /nr/ul",
	(list of supported <nrpara>s)</nrpara>
	+QAUDCFG: "headset /nr/ul",
	(list of supported <nrpara>s)</nrpara>

	(list of supported <nrpara>s)</nrpara>
	+QAUDCFG: "handset /nr/dl",
	(list of supported <nrpara>s)</nrpara>
	+QAUDCFG: "headset /nr/dl",
	(list of supported <nrpara>s)</nrpara>
	+QAUDCFG: "handfree/nr/dl",
	(list of supported <nrpara>s)</nrpara>
	+QAUDCFG: "max9860/dlgain",
	+QAUDCFG: "max9860/ulgain",
	+QAUDCFG: "alc5616/dlgain",
	+QAUDCFG: "alc5616/ulgain",
	+QAUDCFG: "nau8814/dlgain",
	+QAUDCFG: "nau8814/ulgain",
	ок
Maximum Response Time	300ms

12.15. AT+QAUDCFG Extension Configuration

12.15.1. AT+QAUDCFG="handset/eec" Set Echo Cancellation for Handset

AT+QAUDCFG="handset/eec" is used to set echo cancellation for handset.

AT+QAUDCFG="handset/eec" Set Echo C	ancellation for Handset
Test Command AT+QAUDCFG=?	Response +QAUDCFG: "handset/eec", <eecpara> OK</eecpara>
Write Command AT+QAUDCFG="handset/eec"[, <eecpara>]</eecpara>	Response If configuration parameters are omitted: +QAUDCFG: "handset/eec", <eecpara> OK If configuration parameters are entered: OK ERROR</eecpara>

Parameter

<eecpara> List of integers, separated by dot (.)</eecpara>		ntegers, separated by dot (.)
	Par0	Echocancollationcontrol word, 1: enable, 0: disable, default value might be different in different audio modes
	Par1	AEC (Acoustic Echo Canceller) control word, 1: enable, 0: disable, default value might be different in different audio modes
	Par2	EC_NrCoeffs_Real, Number of taps in real subband, range: 1-528. Default value might be different in different audio modes
	Par3	EC_NrCoeffs_Complex_1, Number of taps in complex subband 1, range: 1-528. Default value might be different in different audio modes
	Par4	EC_NrCoeffs_Complex_2, Number of taps in complex subband2, range: 1-528. Default value might be different in different audio modes
	Par5	EC_NrCoeffs_Complex_3, Number of taps in complex subband3, range: 1-528. Default value might be different in different audio modes
	Par6	EC_NrCoeffs_Complex_4, Number of taps in complex subband4, range: 1-528. Default value might be different in different audio modes
	Par7	EC_NrCoeffs_Complex_5, Number of taps in complex subband5, range: 1-528. Default value might be different in different audio modes
	Par8	EC_Blen, NLMS update block length range: (1,2,4,5,8). Default value might be different in different audio modes

- **Par9** SER (Spectral Echo Reduction) control word, 1: enable, 0: disable, default value might be different in different audio modes
- **Par10** SER_Beta, Smoothing factor of the echo reduction applied by the SER, range: 0-32767. Default value might be different in different audio modes
- **Par11** SER_Overest, Overestimation factor of the echo estimation, range: 0-32767. Default value might be different in different audio modes
- **Par12** SER_NoiseLevel, Overestimation factor of the noise estimation, range: 0-32767. Default value might be different in different audio modes
- **Par13** SER_MultCtrl, Allowed amplitude of short-term variations of noise estimation, range: 0-32767. Default value might be different in different audio modes
- **Par14** AGC (Automatic Gain Control) control word, 1: enable, 0: disable, default value might be different in different audio modes
- Par15 RE_LdAddGain, Additionalgain, range: -16384~16384. Default value might be different in different audio modes
- Par16 RE_LdGainLoLim, Total gain lower limit, range: 0-16384. Default value might be different in different audio modes
- **Par17** RE_LdGainUpLim, Total gain upper limit, range: 0-16384. Default value might be different in different audio modes
- Par18 RE_NrShliFilt, Shifts for gain smoothing, range: -36~36. Default value might be different in different audio modes
- Par19 RE_TriggerOffset, AGC trigger offset for the decision logic to allow more double-talk, range: -16384~16384. Default value might be different in different audio modes
- Par20 RE_FarPowerCenter, Threshold on far-end power (below which overestimation is Par22, above which estimationisPar23), range: 0-16384. Default value might be different in different audio modes
- Par21 RE_FarPowerDistorted, Threshold on far-end overestimated power (above which overestimated by Par24, to compensate residual echo when strong LS distortion), range: 0-16384. Default value might be different in different audio modes
- Par22 RE_FarOverEstR0, Far-end power overestimation ratio if loudspeaker power is below Par20, range: 0-14666. Default value might be different in different audio modes
- Par23 RE_FarOverEstR1, Far-end power overestimation ratio if loudspeaker power is abovePar20, range: 0-14666. Default value might be different in different audio modes
- Par24 RE_FarOverEstR2, Far-end power overestimation ratio if loudspeaker power is above Par21, range: 0-16384. Default value might be different in different audio modes
- **Par25** EDL (Echo Delay Lines) control word, 1: enable, 0: disable, default value might be different in different audio modes
- **Par26** Delay in milliseconds in the echo reference path, range: 0-60. Default value might be different in different audio modes

NOTES

- 1. Auto save the configuration to NV. The setting is still valid after module restart.
- 2. If you set Par1 & Par9 & Par14 & Par25 to 0, please set Par0 to 0, otherwise it will return error. When you set Par0 to 0, Par1 & Par9 & Par14 & Par25 will be set to 0 by default.
- 3. Par2+2*(Par3 Par4+Par5+Par6+Par7) < 2200.

Example

AT+QAUDCFG="handset/eec","1.1.100.100.100.1.1.1.2.1.32113.16384.2560.4096.1.0.0.5000.0.0.512

Parameter

<Level>

Numeric type, indicates the uplink gain of max9860, range: 0-100, default: 80

NOTES

This parameter will not be saved.

Example

AT+QAUDCFG="max9860/ulgain",85

//Set uplink gain to 85

OK

12.16. AT+QSIDET Set the Side Tone Gain in Current Mode

AT+QSIDET is used to set the side tone gain value of the current mode.

AT+QSIDET Set the Side Tone Gain in Current Mode

Test Command Response

AT+QSIDET=? +QSIDET: (-450~200)

OK

Read Command AT+QSIDET?	Response +QSIDET: <stgain></stgain>
Write Command AT+QSIDET= <stgain></stgain>	OK Response OK ERROR
Maximum Response Time	300ms

<stgain> Numeric type, indicates the configured side tone gain in current mode. Range: -450~200. The default value of mode 0 is -100, the default value of mode 1 is -100, the default value of mode 2 is -450.

NOTE

The configuration will be saved to NV automatically.

12.17. AT+QAUDGAIN Set Gain Offset

This command is used to set gain offset to change uplink and downlink volume.

AT+QAUDGAIN Set Gain Offset	
Test Command AT+QAUDGAIN=?	Response +QAUDGAIN: (0-2),(-600~300),(-600~300)
	ок
Set Command	Response
AT+QAUDGAIN= <mode>[,<ul_gain_o< td=""><td>If configuration parameters are omitted:</td></ul_gain_o<></mode>	If configuration parameters are omitted:
ffset>, <dl_gain_offset>]</dl_gain_offset>	+QAUDGAIN: <mode>,<ul_gain_offset>,<dl_gain_offset></dl_gain_offset></ul_gain_offset></mode>
	ок
	If configuration parameters are entered:
	OK
	ERROR
Maximum Response Time	300ms

<mode></mode>	Numeric type, audio mode		
	0 Handset		
	1 Headset		
	2 Handfree		
<ul_gain_offset></ul_gain_offset>	Numeric type, value: -600~300, indicates uplink gain offset. Default value of mode		
	0 is -1, the default value of mode 1 is 60, the default value of mode 2 is 100.		
<dl_gain_offset></dl_gain_offset>	Numeric type, value: -600~300, indicates downlink gain offset. Default value of		
	mode 0 is 50, the default value of mode 1 is -1, the default value of mode 2 is 60.		

NOTE

The configuration will be saved to NV automatically

12.18. AT+QCLKOUT Output Clock Source

AT+QCLKOUT is used to output clock source from pin25.

AT+QCLKOUT Output Clock Sou	rce
Test Command AT+QCLKOUT=?	Response +QCLKOUT: (0,1),(1-4) OK
Read Command AT+QCLKOUT?	Response +QCLKOUT: <enable>,<source/> OK +CME ERROR: <err></err></enable>
Write Command AT+QCLKOUT= <enable>[,<source/>]</enable>	Response OK ERROR
Maximum Response Time	300ms

Parameter

<enable></enable>	0	Disable to output clock source
	1	Enable to output clock source
<source/>	1	26MHz

- 2 13MHz
- 3 6.5MHz
- 4 32KHz

NOTES

- 1. Parameters will not be saved to NV.
- 2. When Pin25 is busy, it will return CME error.

12.19. AT+QPCMON Enable PCM Sync & BCLK

AT+QPCMON is used to enable PCM sync & BCLK.

AT+QPCMON Enable PCM Sync & BCLK			
Test Command AT+QPCMON=?	Response +QPCMON: (list of supported <n>s) OK</n>		
Read Command AT+QPCMON?	Response +QPCMON: <n></n>		
Write Command AT+QPCMON= <n></n>	Response OK ERROR		
Maximum Response Time	300ms		

Parameter

<n> Numeric type

- O Close PCM sync & BCLK
- 1 Enable PCM sync & BCLK

NOTE

This parameter will not be saved.

12.20. AT+QIIC IIC Read & Write

AT+QIIC IIC Read & Write		
Test Command	Response	
AT+QIIC=?	+QIIC: (0-1),(0-FF),<0-FF>,<1-2>,(<0-FFFF>)	
	ок	
Write Command	If configuration parameters are entered:	
AT+QIIC= <rw>,<device>,<addr>,<byt< td=""><td colspan="2">Response</td></byt<></addr></device></rw>	Response	
es>[, <value>]</value>	ОК	
	If configuration parameters are omitted:	
	Response	
	+QIIC: <value></value>	
	OK	
Maximum Response Time	300ms	

Parameter

<rw></rw>	0 Write command
	1 Read command
<device></device>	0-0xFF, device address
<addr></addr>	0-0xFF, register address
 	1-2, read/write bytes
<value></value>	0-0xFFFF

NOTE

This parameter will not be saved.

13 Hardware Related Commands

13.1. AT+QPOWD Power Off

The command AT+QPOWD is used to shut down the module. The UE will return OK immediately when the command is executed. Then the UE deactivates the network. After it is completed, the UE outputs the message "POWERED DOWN" and sets the STATE pin as low to enter into the shutdown state. The maximum time for network log-off is 60 seconds. In order to avoid data loss, it is only allowed to turn off the UE power after the module's STATE pin is set as low and the URC "POWERED DOWN" is outputted. If "POWERED DOWN" has not been received after 65s, you should force to switch off the VBAT.

AT+QPOWD Power Off	
Test Command	Response
AT+QPOWD=?	+QPOWD: (0,1)
	ОК
Execute Command	Response
AT+QPOWD[= <n>]</n>	ОК
	POWERED DOWN
Maximum Response Time	300ms

Parameter

<n></n>	0	Immediately power down
	<u>1</u>	Normal power down

13.2. AT+CCLK Clock

AT+CCLK sets and queries the real time clock (RTC) of the module. The current setting is retained until the module is totally disconnected from power.

AT+CCLK Clock		
Test Command	Response	
AT+CCLK=?	OK	
Read Command	Response	
AT+CCLK?	+CCLK: <time></time>	
	OK	
Write Command	Response	
AT+CCLK= <time></time>	ок	
	If error is related to ME functionality:	
	+CME ERROR: <err></err>	
Maximum Response Time	300ms	
Reference		
3GPP TS 27.007		

	m	\sim
< 11	m	2
401		-

String type value, format is "yy/MM/dd,hh:mm:ss±zz", indicate year (two last digits), month, day, hour, minutes, seconds and time zone (indicates the difference, expressed in quarters of an hour, between the local time and GMT; range -48...+56). E.g. May 6th, 1994, 22:10:00 GMT+2 hours equals to "94/05/06,22:10:00+08"

Example

+CCLK: "08/01/04, 00:19:43+00"

OK

13.3. AT+QALARM Set Alarm

This command is used to set alarm based on RTC clock. When RTC clock ran to the alarm time preset, the URC "ALARM RING" or "ALARM MODE" would be reported. When ME is always powered on, "ALARM RING" indicates an alarm is raised. When ME is powered off and kept the power supply, ME will be powered on by raised alarm and "ALARM MODE" would be reported.

AT+QALARM Set Alarm	
Test Command	Response
AT+QALARM=?	+QALARM: (0,1),"DATE,TIME",(0-3),(0,1)
	OK
Read Command	Response
AT+QALARM?	+QALARM:
	<pre><alarm_runing>,<datetime>,<repeat_type>,<power_off>,</power_off></repeat_type></datetime></alarm_runing></pre>
	<alarm_power_on></alarm_power_on>
	ок
Write Command	Response
AT+QALARM= <op>,<datetime>,<repe< td=""><td>ОК</td></repe<></datetime></op>	ОК
at_type>, <power_off></power_off>	or
	ERROR
OK	
	If error is related to ME functionality:
	+CME ERROR: <err></err>
Reference	

Parameter

<alarm_runing></alarm_runing>	Indicate an alarm is presented or not		
	0 No alarm is presented		
	1 An alarm is presented		
<datetime></datetime>	A string parameter indicates the time an alarm raises. The format is "yy/mm/dd,hh:mm:ss+/-zz" where characters indicate the last two digits of year, month, day, hour, minute, second and time zone. The time zone should be input.		
<repeat_type></repeat_type>	An integer parameter which indicates the repeat mode		
	0 None		
	1 Daily		
	2 Weekly		
	3 Monthly		
<pre><power_off></power_off></pre>	An integer parameter which indicates the method of controlling power when alarm		
	raises		
	0 None. Only send "ALARM RING" or "ALARM MODE" to port		
	1 Alarm power off. ME sends "ALARM RING" or "ALARM MODE" to port and		
	will be powered off in 5 seconds		
<alarm_power_on></alarm_power_on>	An integer parameter which indicates whether UE is powered on by alarm or not		
	0 UE is powered on but not by alarm		
	1 UE is powered on by alarm		
<op></op>	Set or cancel alarm		

0 Cancel alarm

Set alarm

NOTE

The configuration will be saved to NV automatically

Example

AT+QALARM? //Query the alarm status and no alarm is set

+QALARM: 0,"",0,0,0

OK

AT+CCLK?

+CCLK: "15/06/15,03:38:20+32" //Query the current time

OK

AT+QALARM=1,"15/06/15,03:39:53+32",1,0 //Set the alarm at 03:39:53 daily

OK

AT+QALARM? //Query the alarm status and a daily alarm is set

+QALARM: 1,"15/06/16,03:39:53",1,0,0

OK

ALARM RING //When the time is 03:39:53, the ALARM RING URC is

reported

AT+QALARM=0 //Cancel the alarm preset

OK

AT+QALARM=1,"15/06/15,04:18:13+32",0,1

//Set the alarm to power off the module at 04:18:13.

OK

AT+QALARM? //Query the alarm status and a power off alarm is set

+QALARM: 1,"15/06/15,04:18:13",0,1,0

OK

ALARM RING //When the time is 04:18:13, the ALARM RING URC is

reported and the module is powered off automatically.

POWERED DOWN

//You need to power on the module manually by PWRKEY

13.4. AT+CBC Battery Charge

AT+CBC returns battery connection status **<bcs>** and battery charge level **<bcl>** of the MT.

AT+CBC Battery Charge	
Test Command AT+CBC=?	Response +CBC: (list of supported <bcs>s),(list of supported <bcl>s),(voltage) OK</bcl></bcs>
Execution Command AT+CBC	Response +CBC: <bcs>,<bcl>,<voltage> OK If error is related to ME functionality: +CME ERROR: <err></err></voltage></bcl></bcs>
Maximum Response Time	300ms
Reference 3GPP TS 27.007	

Parameter

Charge sta	atus
0	ME is not charging
1	ME is charging
2	Charging has finished
3	Recognized power fault, calls inhibited
Battery connection level	
0100	Battery has 0-100 percent of capacity remaining vent
Battery voltage (mV)	
	0 1 2 3 Battery co 0100

13.5. AT+QSCLK Configure Whether or not to Enter into Sleep Mode

AT command AT+QSCLK is used to control the module whether or not to enter into sleep mode.

AT+QSCLK Configure Whether or not to Enter into Sleep Mode		
Test Command	Response	
AT+QSCLK=? +QSCLK: (list of supported <n>s)</n>		

	ок
Read Command AT+QSCLK?	Response +QSCLK: <n></n>
	OK
Write Command	OK Response
Write Command AT+QSCLK= <n></n>	

Parameter

<n></n>	<u>0</u>	Disable slow clock
	1	Enable slow clock, it is controlled by DTR

14.5. Summary of CME ERROR Codes

Final result code **+CME ERROR**: **<err>** indicates an error related to mobile equipment or network. The operation is similar to **ERROR** result code. None of the following commands in the same command line is executed. Neither **ERROR** nor **OK** result code shall be returned.

<err> values are mostly used by common message commands. The following table lists most of general and GRPS related ERROR Codes. For some GSM protocol failure cause described in GSM specifications, the corresponding ERROR codes are not included.

Table 10: Different Coding Schemes of +CME ERROR: <err>

Code of <err></err>	Meaning
0	Phone failure
1	No connection to phone
2	Phone-adaptor link reserved
3	Operation not allowed
4	Operation not supported
5	PH-SIM PIN required

6	PH-FSIM PIN required
7	PH-FSIM PUK required
10	SIM not inserted
11	SIM PIN required
12	SIM PUK required
13	SIM failure
14	SIM busy
15	SIM wrong
16	Incorrect password
17	SIM PIN2 required
18	SIM PUK2 required
20	Memory full
21	Invalid index
22	Not found
23	Memory failure
24	Text string too long
25	Invalid characters in text string
26	Dial string too long
27	Invalid characters in dial string
30	No network service
31	Network timeout
32	Network not allowed - emergency calls only
40	Network personalization PIN required
41	Network personalization PUK required
42	Network subset personalization PIN required

43	Network subset personalization PUK required
44	Service provider personalization PIN required
45	Service provider personalization PUK required
46	Corporate personalization PIN required
47	Corporate personalization PUK required
48	Hidden key required
49	EAP method not supported
50	Incorrect parameters
100	Unknown
103	Illegal MS
106	Illegal ME
107	GPRS service not allowed
111	PLMN not allowed
112	Location area not allowed
113	Roaming not allowed in this location area
132	Service not supported
133	Service not subscribed
134	Service option temporarily out of order
148	Unspecified GPRS error
149	PDP authentication error
150	Invalid mobile class
201	Alternate SIM conflict
500	CTS Handover on Progress
501	Cellular Protocol Stack Out of service state
502	CTS Unspecified Error

800 SIM Security unspecified error

14.6. Summary of CMS ERROR Codes

Final result code **+CMS ERROR**: **<err>** indicates an error related to mobile equipment or network. The operation is similar to ERROR result code. None of the following commands in the same command line is executed. Neither **ERROR** nor **OK** result code shall be returned.

<err> values are mostly used by common message commands:

Table 11: Different Coding Schemes of +CMS ERROR: <err>

Code of <err></err>	Meaning
1	Unassigned (unallocated) number
8	Operator determined barring
10	Call barred
17	Network failure
21	Short message transfer rejected
22	Memory capacity exceeded
27	Destination out of order (service)
28	Unidentified subscriber
29	Facility rejected
30	Unknown subscriber
38	Network out of order (service)
41	Temporary failure
42	Congestion
47	Resource unavailable unspecified
50	Requested facility not subscribed

69	Requested facility not implemented
81	Invalid short message transfer reference value
95	Semantically incorrect message
96	Invalid Mandatory Information
97	Message-type non-existent or not implemented
98	Message not compatible with short message protocol state
99	Information element non-existent or not implemented
111	Protocol error unspecified
127	Interworking unspecified
128	Telematic interworking not supported (MO)
129	Short message type 0 not supported (MO/MT)
130	Cannot replace short message (MO/MT)
143	Unspecified TP-PID error (MO/MT)
144	Data coding scheme (alphabet) not supported (MO)
145	Message class not supported (MT)
159	Unspecified TP-DCS error (MO/MT)
160	Command cannot be actioned (MO)
161	Command unsupported (MO)
175	Unspecified TP-Command error (MO)
176	TPDU not supported (MO/MT)
192	Service centre (SC) busy (MO)
193	No SC subscription (MO)
194	SC system failure (MO)
195	Invalid short message entity (SME) address (MO)
196	Destination SME barred (MO)

197	SM rejected duplicated SM (MO)
198	TP-VPF (validity period format) not supported (MO)
199	TP-VP (validity period) not supported (MO)
208	(U)SIM SMS storage full (MT)
209	No SMS storage capability in (U)SIM (MT)
210	Error in MS (MT)
211	Memory capacity exceeded (MT)
212	(U)SIM application toolkit busy (MT)
213	(U)SIM data download error (MT)
255	Unspecified error cause (MO/MT)
287	Network failure unspecified
290	Network no resource
300	ME failure
301	SMS ME reserved
302	Operation not allowed
303	Operation not supported
304	Invalid PDU mode
305	Invalid text mode
310	SIM not inserted
311	SIM pin necessary
312	PH SIM pin necessary
313	SIM failure
314	SIM busy
315	SIM wrong
320	Memory failure

321	Invalid memory index
322	Memory full
330	SMSC address unknown
331	No network
332	Network timeout
340	NO CNMA acknowledgement expected
500	Unknown
512	This and the following codes are manufacturer specific. Relay path Acknowledgement
513	SMS timer expired
514	SMS forwarding availability failed
515	SMS forwarding availability aborted
516	Invalid TP-MESSAGE-Type indicator
517	No TP-Status report in phase 1
518	No TP-Reject-Duplicate in phase 1
519	No TP-Reply-Path in phase 1
520	No TP-User-Data-Header in phase 1
521	Missing TP-Validity-Period
522	Invalid TP-Service-Centre-Time-Stamp
523	Missing TP-Destination-Address
524	Invalid TP-Destination-Address
525	Missing Service-Centre-Address
526	Invalid Service-Centre-Address
527	Invalid alphabet
528	Invalid TP-User-Data-Length
529	Missing TP-User-Data

530	TP-User-Data too long (large)
531	No command request in phase 1
532	Command request invalid TP-Destination address
533	Command request invalid TP-User-Data length
534	Command request invalid TP-User-Data
535	Command request invalid TP-Command-Type
536	MN MNR creation failed
538	MS Network connection lost
539	Pending MO SM transfer
540	MO SMS rejected by SIM MO SMS control
541	RP ERROR OK
542	RP ERROR OK no icon display
543	FDN check failed
544	Service centre address (SCA) FDN failed
545	Destination address (DA) FDN failed
546	BDN check failed
547	Unspecified SMS PP error
548	No route to destination
549	Channel unacceptable
555	No circuit/channel available
556	Access information discarded
557	Requested circuit/channel not available by other side
558	Quality of service unavailable
560	Bearer capability not authorized
561	Bearer capability not presently available

562	Service or option not available, unspecified
563	Bearer service not implemented
564	ACM equal to or greater than ACM max
565	Only restricted digital information bearer capability is available
566	Service or option not implemented, unspecified
567	User not member of CUG
568	Incompatible by destination
569	Invalid transit network selection
571	Message not compatible with protocol state
572	Recovery on timer expiry
576	Data call active
577	Speech call active
579	MOC setup rejected due to missing ACM info
580	Temporary forbidden call attempt
581	Called party is blacklisted
583	Temporary forbidden call attempt no service
584	Temporary forbidden call attempt limited service
585	Client temporary barred
586	Dual service call active
587	Atc Fclass not speech
590	Client not registered
591	Active client gone
595	Rejected by call control
601	Invalid ALS line
604	MM no service (out of coverage)

605	MM access class barred (RR_REL_IND During RR Conn. Establishment
606	ME busy -CM service request already pending
608	Rejected due to SUP timer expiry
609	Rejected due to USSD busy
610	Rejected due to SS busy
612	SIM toolkit request is rejected, because another SIM toolkit request is pending
614	Rejected because SIM toolkit request Is not yet answered by the user
615	MN setup SS error
616	Call controller blocked (Other Call Command Pending
618	Environment parameter not set correctly (Fclass/Cmod)
619	Other blocking call present
620	Lower Layer Failure
621	The authentication procedure failed
622	The packet-switched registration procedure failed
623	CM service reject from the network
624	The ABORT message was received from the network
625	Timer expiry
626	IMSI detach was initiated
627	Normal RR connection release (2G)
628	Registration failed
630	Failure due to handover
631	Link establishment failure
632	Random access failure
633	Radio link aborted

634	Lower layer failure in layer 1
635	Immediate assignment reject
636	Failure due to paging
637	Abnormal release unspecified
638	Abnormal release channel unacceptable
639	Abnormal release timer expired
640	Abnormal release no act on radio path
641	Preemptive release
642	UTRAN configuration unknown
643	Handover impossible
644	Channel mode unacceptable
647	Lower layer failure from NW
649	Conditional IE error
650	No cell allocation available
653	Re-establishment reject
654	Directed Sigconn Re-establishment
656	Release of RRC connection without network activity (3G) lower layer failure downlink
657	Lower layer failure uplink
658	Cell barred due to authentication failure
659	Signaling connection release
660	CS connection release triggered by MM
661	RRC connection establishment failure
662	RRC connection establishment reject with redirection
663	Resource conflict
664	Layer failure in layer 2

665	L2 cause T200 expiry N200 plus 1 Times
669	RR connection release due to BAND change (2G)
670	Release of the RRC connection due to out of service in Cell_Fach (3G)
671	Release of the RRC connection due to not matching PLMN in shared networks (3G)
672	Error Happens while call Is already disconnected/late error
674	SIM toolkit cannot initiate a call, because MMI is not registered
675	SIM toolkit call setup request is rejected due user did not accept
676	Proactive SIM appl terminated by user
677	SIM toolkit originated SIM reset (Refresh Request)
680	Dial string/number incorrect

14.7. Summary of URC

Table 12: Summary of URC

Index	URC Display	Meaning	Condition
1	RDY	ME initialization is successful	N/A
2	+CFUN: 1	All function of the ME is available	N/A
3	+CPIN: <state></state>	SIM card pin state	N/A
4	+QUSIM: 0	Use SIM card	N/A
5	+QUSIM: 1	Use USIM card	N/A
6	+QIND: SMS DONE	SMS initialization finished	N/A
7	+QIND: PB DONE	Phonebook initialization finished	N/A
8	POWERED DOWN	Module power down	AT+QPOWD
10	+CREG: <stat></stat>	Indicate registration status of the ME	AT+CREG=1

11	+CREG: <stat>[,<lac>,<ci>[,<act>]]</act></ci></lac></stat>	After cell neighborhood changing shows whether the network has currently indicated the registration of the ME, with location area code	AT+CREG=2
12	+CGREG: <stat></stat>	Indicate network registration status of the ME	AT+CGREG=1
13	+CGREG: <stat>[,<lac>,<ci>[,<act>]]</act></ci></lac></stat>	After cell neighborhood changing shows whether the network has currently indicated network registration status of the ME, with location area code	AT+CGREG=2
14	+CTZV: <tz></tz>	Time zone reporting	AT+CTZR=1
15	+CTZE: <tz>,<dst>,<time></time></dst></tz>	Extended time zone reporting	AT+CTZR=2
16	+CMTI: <mem>,<index></index></mem>	New message is received, and saved to memory	See AT+CNMI
17	+CMT: [<alpha>],<length><cr><lf><p du></p </lf></cr></length></alpha>	New short message is received and output directly to TE (PDU mode)	See AT+CNMI
18	+CMT: <oa>,[<alpha>],<scts>[,<tooa>,< fo>,<pid>,<dcs>,<sca>,<tosca>,< <length>]<cr><lf><data></data></lf></cr></length></tosca></sca></dcs></pid></tooa></scts></alpha></oa>	New short message is received and output directly to TE (Text mode)	See AT+CNMI
19	+CBM: <length><cr></cr></length>	New CBM is received and output directly (PDU mode)	See AT+CNMI
20	+CBM: <sn>,<mid>,<dcs>,<page>,<pag es>,<cr>,<lf><data></data></lf></cr></pag </page></dcs></mid></sn>	New CBM is received and output directly to TE (Text mode)	See AT+CNMI
21	+CDS: <length><cr><lf><pdu></pdu></lf></cr></length>	New CDS is received and output directly (PDU mode)	See AT+CNMI
22	+CDS: <fo>,<mr>,[<ra>],[<tora>],<scts>,<dt>,<st></st></dt></scts></tora></ra></mr></fo>	New CDS is received and output directly to TE (Text mode)	See AT+CNMI
23	+COLP: <number>,<type>,[<subaddr>],[<satype>],[<alpha>]</alpha></satype></subaddr></type></number>	The presentation of the COL(connected line) at the TE for a mobile originated call	AT+COLP=1
24	+CLIP: <number>,<type>,[subaddr],[sat ype],[<alpha>],<cli validity=""></cli></alpha></type></number>	Mobile terminating call indication	AT+CLIP=1
25	+CRING: <type></type>	An incoming call is indicated to the TE with unsolicited result code instead of the normal RING	AT+CRC=1
26	+CCWA: <number>,<type>,<class>[,<alp< td=""><td>Call waiting indication</td><td>AT+CCWA=1,1</td></alp<></class></type></number>	Call waiting indication	AT+CCWA=1,1

	ha>]		
27	+CSSI: <code1></code1>	Shows the +CSSI intermediate result code presentation status to the TE	AT+CSSN=1
28	+CSSU: <code2></code2>	Shows the +CSSU unsolicited result code presentation status to the TE	AT+CSSN= <n>,1</n>
29	+CUSD: <status>[,<rspstr>,[<dcs>]]</dcs></rspstr></status>	USSD response from the network, or a network initiated operation	AT+CUSD=1
30	+QSIMSTAT: 1, <inserted_status></inserted_status>	Indicate SIM card inserted or removed	AT+QSIMSTAT=1
31	+CGEV: NW DEACT <pdp_type>, <pdp_addr>, [<cid>]</cid></pdp_addr></pdp_type>	The network has forced a context deactivation	AT+CGEREP=2,1
32	+CGEV: ME DEACT <pdp_type>, <pdp_addr>, [<cid>]</cid></pdp_addr></pdp_type>	The ME has forced a context deactivation.	AT+CGEREP=2,1
33	+CGEV: NW DETACH	The network has forced a Packet Domain detach	AT+CGEREP=2,1
34	+CGEV: ME DETACH	The mobile equipment has forced a Packet Domain detach	AT+CGEREP=2,1
35	+CGEV: NW CLASS <class></class>	The network has forced a change of MS class	AT+CGEREP=2,1
36	+CGEV: ME CLASS <class></class>	The mobile equipment has forced a change of MS class	AT+CGEREP=2,1

14.8. Parameter List of AT+CEER

Table 13: Cause and Description List of AT+CEER

Cause	Description
0	No cause information available
1	Unassigned (unallocated) number
3	No route destination
6	Channel unacceptable
8	Operator determined barring
16	Normal call clearing

17	User busy
18	No user responding
19	User alerting, no answer
21	Call rejected
22	Number changed
26	Non selected user clearing
27	Destination out of order
28	Invalid number format (incomplete number)
29	Facility rejected
30	Response to STATUS ENQUIRY
31	Normal, unspecified
34	No circuit /channel available
38	Network out of order
41	Temporary failure
42	Switching equipment congestion
43	Access information discarded
44	Requested circuit/channel not available
47	Resources unavailable, unspecified
49	Quality of service unavailable
50	Requested facility not subscribed
55	Incoming calls barred within the CUG
57	Bearer capability not authorized
58	Bearer capability not presently available
63	Service or option not available, unspecified
65	Bearer service not implemented
68	ACM equal to or greater than ACM max

69	Requested facility not implemented
70	Only restricted digital information bearer capability is available
79	Service or option not implemented, unspecified
81	Invalid transaction identifier value
87	user not member of CUG
88	Incompatible destination
91	Invalid transit network selection
95	Semantically incorrect message
96	Invalid mandatory information
97	Message type non-existent or not implemented
98	Message type not compatible with protocol state
99	Information element non-existent or not implemented
100	Conditional IE error
101	Message not compatible with protocol state
102	Recovery on timer expiry
102	
103	Illegal MS
	Illegal MS Illegal ME
103	
103 106	Illegal ME
103 106 107	Illegal ME GPRS service not allowed
103 106 107 111	Illegal ME GPRS service not allowed protocol error, unspecified
103 106 107 111 112	Illegal ME GPRS service not allowed protocol error, unspecified Location area not allowed
103 106 107 111 112 113	Illegal ME GPRS service not allowed protocol error, unspecified Location area not allowed Roaming not allowed in this location area
103 106 107 111 112 113 124	Illegal ME GPRS service not allowed protocol error, unspecified Location area not allowed Roaming not allowed in this location area MBMS bearer capabilities insufficient for the service
103 106 107 111 112 113 124 125	Illegal ME GPRS service not allowed protocol error, unspecified Location area not allowed Roaming not allowed in this location area MBMS bearer capabilities insufficient for the service LLC or SNDCP failure
103 106 107 111 112 113 124 125 126	Illegal ME GPRS service not allowed protocol error, unspecified Location area not allowed Roaming not allowed in this location area MBMS bearer capabilities insufficient for the service LLC or SNDCP failure Insufficient resources

129	User authentication failed
130	Activation rejected by GGSN
131	Activation reject, unspecified
132	Service not supported
133	Requested service option not subscribed
134	Service option temporarily out of order
135	NSAPI already used
136	Regular PDP context deactivation
137	QoS not accepted
138	Network failure
139	Reactivation requested
140	Feature not supported
141	Semantic error in the TFT operation
142	Syntactical error in the TFT operation
143	Unknown PDP context
144	Semantic errors in packet filter(s)
145	Syntactical errors in packet filter(s)
146	PDP context without TFT already activated
148	Unspecified GPRS error
149	PDP authentication error
212	APN restriction
256	Internal unspecified
257	Out of memory
258	Invalid parameters
259	Data call active
260	Speech call active

262	Missing ACM information
263	Temporary forbidden
264	Called party is blacklisted
265	Blacklist is full
266	No Service
267	Limited service
268	Client conflict
269	Dual Service call active
271	Unknown SIM error
274	Active Client is Gone
277	SIM status failure
278	Rejected by call control
279	FDN failed
280	BDN failed
283	CCBS possible
284	Invalid alternate service line
285	LND overview
287	MM network failure unspecified
288	MM no service
289	MM access class barred
290	MM RR no resource
291	MM ME busy
292	MM unspecified
301	MMI not registered
303	Rejected by user
304	Rejected due to time out

306	Disconnected due to SIM TK call setup
307	Pending SIM TK call setup
310	SIM reset
340	MM sapi3 release
341	MM lower layer failure
342	MM authentication failure
343	MM PS reject
344	MM service rejected
345	MM abort by network
346	MM timeout
347	MM detach
348	MM RR connection release
349	MM not registered
350	MM reestablishment failure
351	Failure due to handover
352	Link establishment failure
353	Random access failure
354	Radio link aborted
355	Lower layer failure in Layer 1
356	Immediate Assignment Reject
357	Failure due to paging
358	Abnormal release unspecified
359	Abnormal release channel unacceptable
360	Abnormal release timer expired
361	Abnormal release no act on radio path
362	Preemptive release

363	UTRAN configuration unknown
364	Handover impossible
365	Channel mode unacceptable
366	Frequency not implemented
367	Originator leaving call group area
368	Lower layer failure from network
369	Call already cleared
370	Semantically incorrect message
371	Invalid mandatory info
372	Message type non existing
373	Message type incompatible in state
374	Conditional information element error
375	No cell allocation available
376	Protocol error unspecified
377	Normal event
378	Unspecified
379	Preemptive release
380	Congestion
381	RE establishment reject
382	Directed sig conn establishment
383	User inactivity
384	Lower layer failure downlink
385	Lower layer failure uplink
386	Cell barred due to authentication failure
387	Signaling connection release
388	CS connection release triggered by MM
